The story as told about the Homestead range is complete and does not leave anything further to be added. It is attractive and it gets to the people who are interested.

Value of Illustrations

In the smaller articles which a merchant has in his stock it is always well to have an illustration. People will be attracted by an illustration and will stop to read where they would otherwise pass by. These can be obtained at very small cost, in some cases 10 cents, 15 cents and 20 cents. They are a good investment for the merchant who is desirous of making his publicity pay.

In the advertisement "It's Easier to Cook when you have Handy Kitchen Utensils" is a type of advertisement, about which it may be said it is very doubtful whether desired results would be secured. A good point is made in that "old kitchen utensils are unsanitary." The labor-saving utensils should have been further emphasized by an enumeration of a few of the articles with prices. The advertisement leaves the reader in doubt as to what these labor-saving devices are and depends on his curiosity to follow up and see what they are. This is taking too much for granted. If a few had been enumerated such as given in the items quoted under "Electric Irons" and "Electric Toasters" and "Coffee Percolators", it is safe to presume that the advertisement would have given better results.

The Birmingham and Wolverhampton Factors' Association has decided to reduce cash discounts on hardware from 5 per cent. to 2½ per cent. The factors are the manufacturers' agents. The factors claim the manufacturers have cut down their cash discounts since the war began in the same ratio.

During the first year of the war 66 hardware manufacturers in Germany voluntarily paid $1,821,000 toward the support of their men on service in the Kaiser's armies. They look forward to a "Greater Germany, possessing possibilities of economic expansion adequate to her needs." It is not known whether the manufacturers continue to pay.

In Birmingham the manufacturers of nails have been concerned over who should stand the loss for the weight of bags in which nails are shipped. A trade custom appears to be "gross weight in bags; net weight in kegs." A bag weighing 2⅛ pounds in the old country carries 109½ pounds of nails. A question that remains unsolved is whether the retailer may weigh his own wrapping paper with the nails he sells.

Munitions and the Hardware Trade

The Immensity of the Munitions Industry Has Affected Many Other Lines — Huge Demand for Steel and Ingot Metals Has Affected Hardware Trade — Many New Industries Started as Result of the War

Written for Hardware and Metal by A. G. Webster.

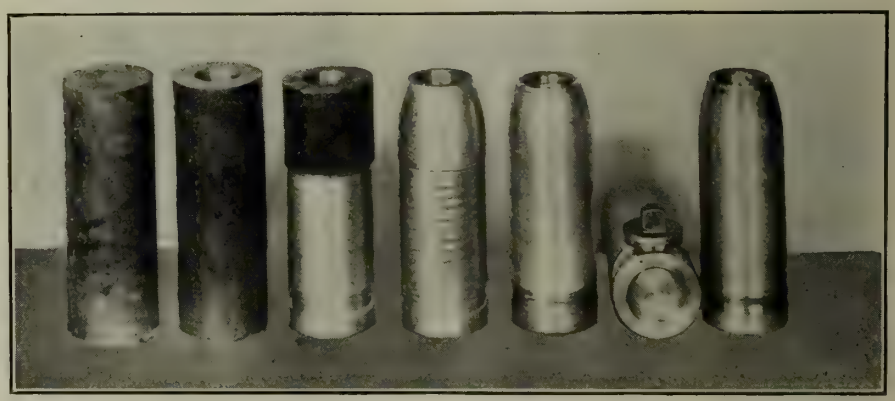
PERHAPS the most interesting and far reaching success that has been achieved industrially in Canada during the war is the development of the shell industry. The war had been in progress some months before the possibility of making munitions was ever considered and when orders for shells were actually placed by the Imperial Government with Canadian concerns problems had to be solved which taxed the ingenuity of our mechanical men to the utmost as there were then no plants equipped for the work. It was an entirely new proposition and one surrounded with mechanical difficulties involving new methods and ideas. It is therefore not surprising that our manufacturers with no precedents to follow were somewhat doubtful as to the ultimate success of the undertaking. Eventually however prompted by patriotic motives and a desire to keep their machine shops running rather than idle, as they would no doubt have been, our mechanical men came forward equipped their plants and tackled the work with the greatest enthusiasm. Much credit is due these men, particularly the pioneers in the industry, for the way in which the initial difficulties were overcome and for the success which in due time rewarded their efforts.

Manufacturing Development

The Shell Committee with Col. Alex Bertram, now Brigadier-General Sir Alex Bertram, as chairman, was formed early in 1915 to distribute orders from the Imperial Government and to supply materials to the shops and generally supervise the manufacture of the shells. The committee upon receipt of an order for shells (18 pdr. shrapnel were the first made) would place orders for the various parts with manufacturers who were accustomed to a similar class of work, all these parts being sent to the machine shops.

The steel shell casings are made at the forging plants from blanks supplied from the steel mills. These mills also forge the casings, but in addition roll the bars from which the blanks are cut. The forging plants had to be equipped with powerful hydraulic presses for making the casings. The brass parts are made at plants equipped with suitable machinery. The cartridge cases are made at other plants specially equipped for the purpose and the fuses are in the meantime being obtained from the United States. These latter features will be referred to later. The bullets, resin and copper bands are all obtained from different sources.

The initial orders were for shrapnel shells and the majority of the plants are still working on that type although high explosive shells are also being made in considerable quantities. The machine shops are supplied with all the parts except cartridge cases, fuses and powder. The shell casings are finished at the machine shops and then sent away to an assembling plant to be finished or fixed. Fixed ammunition being the term applied to completed shells ready for firing.



Showing shells in the various processes of manufacture from bar stock to the finished shell case.

As already stated 18 pounder shrapnel were the first type of shell made in Canada. Later on, orders for 18 pdr. and 4.5 in. high explosive shells were placed, presenting further problems for the manufacturer to solve. The number of plants employed in making shells grew as larger orders were placed and the output increased rapidly. Towards the end of the year a change in the organization of the Shell Committee was decided upon by the Imperial authorities and the Imperial Munitions Board was appointed, with J. W. Flavelle, chairman. This Board replaced the Shell Committee and acts under the British Minister of Munitions. The functions of the Board are practically the same as the old committee, but a system of tendering for shell contracts was introduced in order to keep the cost as low as possible.

Large Calibre Shells

Soon after the Imperial Munitions Board was appointed tenders were called for large calibre shells and orders placed valued at about $80,000,000. These large shells composed 5 in., 6 in., 8 in. and 9.2 in. calibre. They are all of the high explosive type and the manufacturing methods that had to be devised were different in many respects from those adopted for the smaller shells. The placing of the orders for the larger calibre shells was an important development in the industry from a mechanical standpoint and also as regards the money involved. As these large shells are in great demand at the front, it is fully expected that further orders will come to Canada during the year for this type. The Canadian manufacturers have been particularly successful in making shrapnel shells and as a large number of the plants are equipped for turning out this type, the output will be heavy throughout the year. No further orders, it is said, will be placed for 18 pdr. high explosive shells but a large number of 4.5 high explosive shells are being made and the production of this type will be continued. The production of the larger calibre shells will be confined to the larger plants which have now installed the necessary equipment.

Large Quantity of Material Used

The immensity of the industry will be appreciated when it is realized that

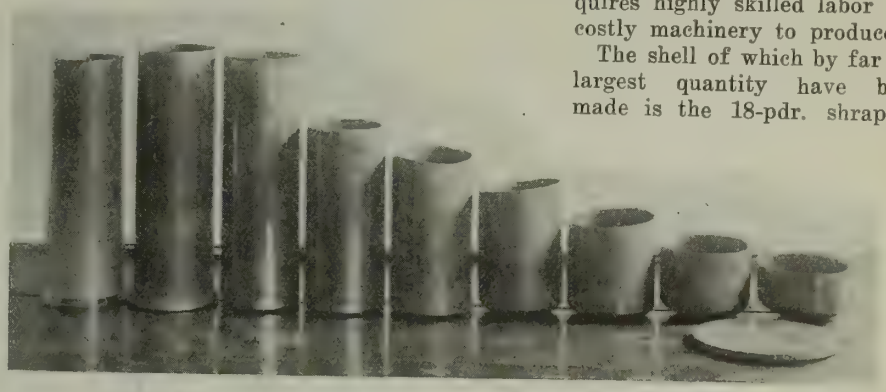
orders for munitions valued at over $300,000,000 have already been placed in Canada by the Imperial Government. Further orders are being placed from time to time with the Imperial Munitions Board for distribution in this country. There are now sufficient orders on hand to keep our munitions plants busy for the entire year. This large sum of money coming into the country and a considerable part of it placed in circulation cannot help but have a most beneficial effect. Orders for 22,800,000 shells have been placed in Canada. The cost of all the component parts required in the manufacturing of that quantity of shells including the material, machining and assembling is estimated at $282,000,000. In addition there have been orders for cartridge cases, primers, fuses, etc., amounting to $20,000,000 making the total of $302,000,000.

Over 450 Plants Engaged

The latest available figures show that about 454 plants are at present engaged on munitions work. It is estimated that between 80,000 and 90,000 men are employed in the munitions industry. Not all this money will remain in Canada for considerable sums have gone to the United States for purchasing fuses, copper and some steel. A good proportion however, will be held here and form a valuable asset.

A prodigous amount of material is required for the manufacture of such a large quantity of shells. The latest figures available date back to about the middle of December when it is calculated that approximately 22,000,000 shells had been ordered. Since then other orders have been placed and the amount of material required will be proportionately greater. The following figures for the twenty-two million shells show the amount of material required for their production. The quantity of steel totalled 800,000.000 pounds; brass, including copper and zinc, 44.865,617 pounds; copper, 21,595,832 pounds; lead, 101,758,327 pounds; tin, 1,447,708 pounds; resin, 10,037,506 pounds; powder, 4,094,531 pounds; cordite, 9,649,990 pounds; nitrocellulose powder, 3,750,000 pounds; trinitrotoluene, 10,690,000 pounds, or a total of 1,007,889,511 pounds.

The above figures make it possible to realize perhaps more than anything else the importance of the munitions industry and the rapid development that has taken place in less than twelve months. Not even the most sanguine person would ever have imagined that such things could happen. When all the contracts are completed the amount of material used will be unprecedented in the history of the Country.



Brass cartridge cases in various processes of manufacture.

Types of Shells

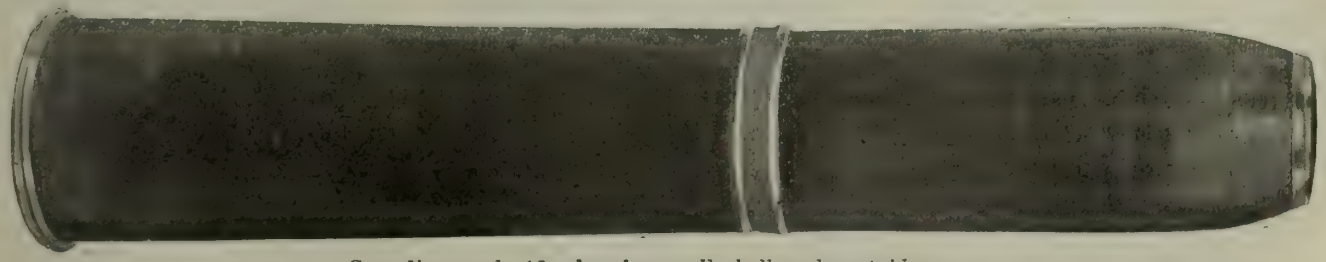
The different types of shells that are being manufactured in Canada for the British Government are 18-pdr. shrapnel empty, 18-pdr. shrapnel fixed, 18-pdr. high explosive empty, 18-pdr. high explosive fixed, 4.5 howitzer empty, 4.5 howitzer fixed (except loading), 60-pdr. high-explosive empty, 8-in. high-explosive empty, 9-2 in. high explosive empty.

Owing to the difficulty that has been experienced in obtaining fuses, the majority of the shells shipped have been empty, that is without the explosive, cartridge cases or fuses. Until a few months ago the supply of cartridge cases was entirely inadequate but this has now remedied. With regard to the fuses it is hoped that better delivery will be made in the near future thus making it possible to ship fixed ammunition entirely. Preparations are being made to manufacture fuses in Canada but some time must elapse before they are being made in sufficient quantities here. A fuse is a delicate piece of mechanism and requires highly skilled labor and costly machinery to produce.

The shell of which by far the largest quantity have been made is the 18-pdr. shrapnel. The accompanying illustration shows a shell with cartridge case attached, but no fuse. The fuse will be screwed into the nose. The shell contains about 370 bullets and a matrix of resin which are discharged from the shell in a forward direction when in action. The cartridge case contains cordite as a propellant. When the gun is fired the shell is discharged igniting the fuse at the same time. The fuse is timed to fire a charge of black powder in the base of the shell at a certain predetermined range. When the powder explodes it forces out the bullets, the nose of the shell opening out on account of the pressure, but the shell does not burst as in the case of a high explosive shell. Shrapenl shells are used against infantry advancing or in exposed positions. High explosive shells are used for blowing up trenches and fortified positions, etc.

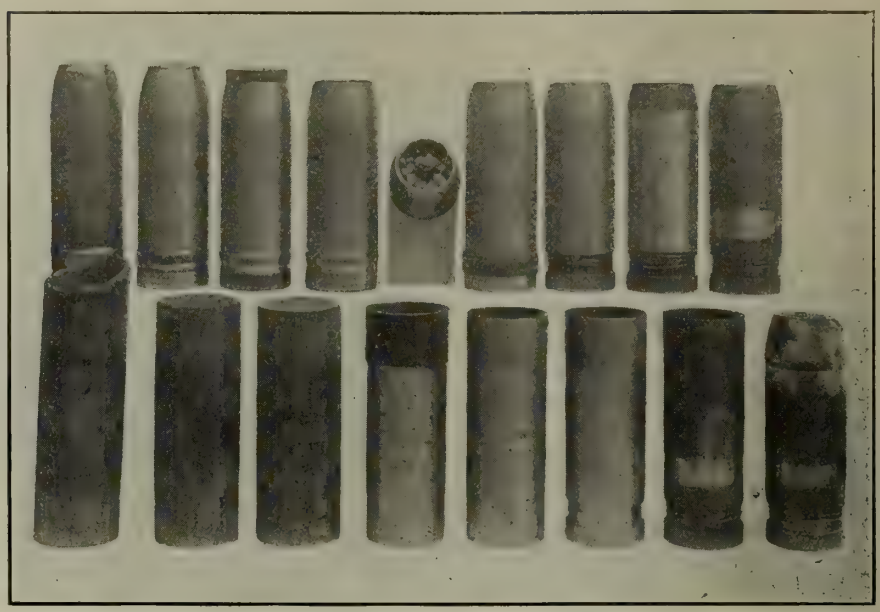
The "18-pounder shrapnel fixed ammunition" contains the following parts in addition to the special machining and assembling that have to be done in connection with the finishing of each shell:— Forgings, copper bands, brass fuse tubes, tin cups, steel discs, brass sockets, plugs, bullets, buckshot, resin, grub screws, paint, cartridge cases, primers, clips, cordite, pellets, powder, fuses, loading and boxes.

High explosive shells, as the name



Canadian-made 18-pdr. shrapnell shell and cartridge case.

implies, are filled with a very powerful explosive, usually lyddite, in the British shells. They are hollow inside for the explosive and do not contain any bullets but of course have a fuse and a device for igniting the charge. The cartridge case for the smaller calibres is the same as for the shrapnel and contains cordite. The H.E. shells being made in Canada are of various sizes whereas the shrapnel is made only in one size. When a H. E. shell bursts it is blown to fragments and has a devasting effect over a wide area according to the size of the shell. A 5 in. H.E. shell weighs 50 lbs. empty and 60 lbs. filled. A 6 in. shell weighs 87¼ lbs. empty and 100 lbs. filled. An 8 in. shell weighs 173 lbs. empty and 200 lbs. filled. A 9.2 in. shell weighs 244½ lbs. empty and 290 lbs. filled. It is these high explosive shells that have done so much damage against fortifications during the present war. Shells of the above calibre are being used, but of course the greatest damage is being done by large shells 12 in. and over.



18 pdr. Shrapnel Shells in the various processes, from the forging to the product as completed in Canada.

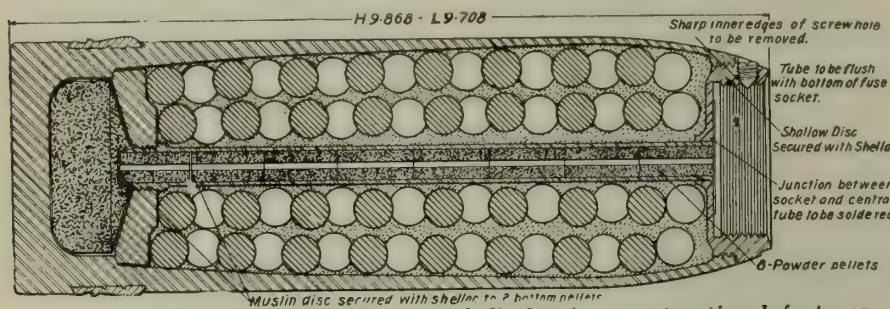
Effect On Other Industries

The question of materials used in the manufacture of munitions involves a consideration of the sources of supply and development of industries special and otherwise to produce the finished product. In this respect the war has had a far reaching effect in Canada. Take for instance the steel industry. Rather more than twelve months ago the steel mills were practically idle, now they are working at capacity and have been for several months. The output is greater than at any time in the history of the country. There never has been such an enormous amount of copper consumed than at the present time. Lead also is being used in enormous quantities for bullets while large quantities of antimony are being used for the same purpose, bullets being composed of both these metals. There is a heavy consumption of spelter for brass.

Opens New Industries

An important result of the heavy demand for copper and spelter has been the establishment of refineries in British Columbia. Hitherto copper and zinc mined in Canada had to be sent to the States to be refined. As the refineries in Canada develop, no metal will be exported for treatment. It is proposed to establish a plant for refining nickel in Canada which is another very important development. The most valuable nickel deposits in the world are in Canada but all the metal found here is refined in the States.

The manufacture of explosives has developed and is now a more important industry. There are now plants making tri-nitro-toluol, nitrocellulose and sabulite. Cordite and gunpowder are being made in large quantities. Sulphuric acid, acetone and other chemicals used for explosives are also being produced in larger quantities than ever before.



Sectional view of 18-pdr. shrapnel shell showing constructional features.

A loading factory is under construction for fixing shells. The loading of time fuses is quite an intricate and delicate operation. The forging plants have all made large additions to their equipment. The steel mills have installed open hearth furnaces and rolling mills for turning out bars. The investment in machine tools at the various shops represents a large amount of money.

There are many other important industries such as the manufacture of field guns, aeroplanes, submarines, etc., being carried on in Canada, but for obvious reasons the publication of the details is being witheld at the present time.

Taking everything into consideration there never has been an industry which has developed so rapidly and so successfully. The effect is so far-reaching, touching many industries. The enormous sums of money that have been spent on building and equipping plants. The present abnormal condition in the steel trade here and also in the States is almost entirely due to the demand for shells. The shortage of steel caused thereby is affecting practically every trade. The demand for munitions is so great that it will indirectly affect the entire commercial community for the duration of the war.

The reason for the high cost of hardware at the present time may be traced indirectly to the manufacture of munitions because of the heavy demand for steel and ingot metals and the resultant big increase in prices.

The Prime Minister of Australia has announced that all persons of enemy origin, whether naturalized or not, must be struck off the list of shareholders of all Australian companies within three months.

There are many copper mines in Serbia which prior to the Teuton occupation had not reached the producing stage. Only two copper mines were in operation there, both owned by French companies. In 1912-13 the output of one of these mines was 7,600 tons of copper.

A Hardware Patent on Insurance Selling

Outside Approach Getting Millions of Business Yearly in Insurance—The Application of the Method to a Hardware Business—Following the City Hall Records for Prospects—Developing the Sales Value of the Staff

Written for Hardware and Metal by W. E. Hammond.

"HOW do you make such a large turn-over with such a small staff and stock?" I asked a man whose wholesale connections had named him to me as a live wire.

"Insurance," he said without cracking a smile.

"Insurance," I repeated blankly.

"Yes, by applying insurance selling methods to our problems. Did you ever stop to realize that of all the millions of insurance in force in this country to-day probably five per cent. of it was bought over the counter so to speak, and the remaining ninety-five per cent. was rustled and sweated for by a keen selling system that literally dug out its prospects and made them acquainted with the existence of their own needs. I shouldn't wonder but what those facts account for the importance of insurance companies to-day. Just consider what that fact means when applied to almost any selling business to-day. It means that if insurance, an admittedly legitimate and desirable proposition, requires such selling methods, if men are such fools as to require having its desirable features pointed out, how much more important is it that we who sell less important things pursue a similar campaign.

Applying It to Hardware

"This is the way we do it. In the first place we have a regular net with which we sweep all channels of news for the gathering the names of live prospects for we haven't time to bother with every unknown man in the street. There are so many first-class prospects that we aim to skim the cream of the trade first so to speak. When competition gets keener we can, of course, fall back upon the less desirable class.

Watching the Newspapers

"I think that outside of a personal connection the newspapers and the city hall records are our one best bet. We watch all notices of transfers of property, deaths, marriages, company formations, etc., and from the names of people mentioned in these connections pick out those that our own knowledge pieced out by a few judicious inquiries indicate most encouraging as prospects.

"To illustrate. Take the average small town newspaper. It chronicles the comparatively small purchases of the town's inhabitants as news items and in this way in addition to following up all the large operations like house building, etc., we can chase up the purchasers of a variety of lines that may need hardware equipment. For instance: Last summer a man in the other end of the town was reported as having bought a row boat from an agency in Vancouver which is our nearest jobbing centre. Now, we hold the agency of an outboard boat motor. We don't carry any stock other than catalogues, and my motor which we use for demonstration purposes. So we wrote that man a letter with a good live talking point in the opening sentence, one that served to arrest the reader's attention and carry him along into the argument contained in the body of the letter. We made it brief and avoided any circular-like appearance in the form of the address and wound up by appointing a date for a call. Didn't ask for permission, simply said we would be on the job.

"Promptly on the day and hour appointed, our youngest clerk, who is a bit of a motor fan, presented himself at this man's office, got him interested, left some catalogues and made another date for a demonstration. He took that man out in his new boat with my old motor strapped on and sold him five miles up the river going at five miles an hour. That was a typical red hot follow up that resulted in a twenty-five dollar profit for the store on an investment of a two-cent stamp, ten cents car fare and three hours' time.

Auto-Accessory Sales

"In the same way we chase down any number of auto accessory prospects. A Ford car for instance is sold naked with only a halter on, to use a horsey expression. The owner figures on doing without the accessories other than actual necessities such as lamps, etc. However, a few days' use of the car convert him into a buyer of this line. We don't have to do any talking on that line. Our job is to grab him before someone else does for the purchases that he is certain to make. It's done in the same way, letters and follow up calls and sometimes we cut out the letter. It depends upon the man. Sometimes we open up some other channel of approach. In the case of a crusty old fellow, who blew himself to a car about the time his engagement to a young girl became known, we interested the bride and the rest was easy. She led the old fellow in here on a silken rope and he bought lavishly. Incidentally we sold them most of their household hardware, so that in the course of the summer we got a return of several hundred dollars business out of a piece of small gossip of the kind that a man hears every day.

The City Hall Records

"One of us goes up to the City Hall every week and tabulates all live news items pertaining to our line. Also we keep a good live list of property owners and near property owners and approach men who have just acquired some new property with some proposition to improve its appearance. As a general thing when a man buys something, it is for immediate use or for speculation. In either case he has different ideas than the former owner about its availability else he would not have bought it. The former owner probably would have plugged along for years without making any but the most necessary changes in his property. But the new man, being new will probably be in the frame of mind to spend some money.

"If it's a house that he is going to live in or rent he will likely be in a receptive frame of mind as to painting or adding some little touches in the way of builders' hardware, or building additions that mean nails, screws, etc. If he has bought on speculation he is sure to want to shine it up to aid its sale.

A Developer of Men

"One of the greatest assets of this branch of our business is its value as a developer of sales, initiative and resource in our force. The case of this boy who sold the motor is a case in point. He simply did not take hold of the work as he should have done until quite by accident and in desperation I started him on a lead that eventually developed into the insurance method business we have to-day. He got interested, made the sale, had his eyes and mine opened to the possibilities, and to-day he's as full of pep as a fox terrier."

CRIMINAL LAW AND ITS APPLICATION TO COMMERCIAL TRANSACTIONS

Prepared for Hardware and Metal by Walter E. Lear

EDITOR'S NOTE—An arrangement has been made by which a series of articles bearing on the legal phases of business will appear in HARDWARE AND METAL. They will deal with the workings of the law as applied to commercial transactions, with particular regard to the retail business. Walter E. Lear, who will prepare the articles, is perhaps better fitted for this work than any other lawyer in Canada. As editor of the "Ontario Weekly Reporter," "Eastern Law Reporter," "Canadian Reports, Appeal Cases" and "Quarterly and Annual Digest Canadian Case Law" he keeps closely in touch with every legal development in every province of Canada. He has, in addition, written a number of books on legal questions which have been accepted as authoritative. Mr. Lear will write his articles for the lay reader and it is not claiming too much to say that, by following his explanations, readers of HARDWARE AND METAL will be able to gain a clear insight into the working principles which govern the law in reference to business transactions.

Any questions concerning legal matters, sent by readers to us, will be answered by Mr. Lear through the columns of HARDWARE AND METAL. This service will be entirely free, the only stipulation being that the name of the enquirer be given, though, of course, no names will be used in publishing the answers. It is important for inquirers to remember that, to get an accurate answer, it is necessary to give full information.

Registered in accordance with the Copyright Act.

Section 1.—Introduction

THE laws by which the rights of society are enforced, and the wrongs redressed, are but little known to the great majority of the community. Were it otherwise—were the honest portion of mankind more thoroughly aware of the distinction between civil and criminal wrongs, and the legal grounds upon which the latter are distinguishable from the former—the dishonest would find their attempts at the commission of offence less frequently successful.

To this ignorance is referable much of the litigation which occupies our criminal courts of justice; hence the obvious importance that every one engaged in commercial transactions should adopt the advice of that great judge and commentator, Blackstone:—"It is incumbent upon every man to be acquainted with those laws, at least with which he is immediately concerned."

And now, reader, in addressing you, I shall assume that you are engaged in commercial pursuits of one kind or another and that as such, whether merchant or tradesman, you are desirous of acquiring some practical information touching those laws with which you are immediately concerned.

I am aware that there prevails amongst the majority of the community a sort of instinctive dread that legal knowledge is wholly beyond the ordinary mind. True it is, the attainment of anything approaching to an intimate knowledge of law and its technicalities would, to persons engaged in commerce or trade, be a task as difficult as it would be useless; but the amount and nature of the information indicated by Blackstone, and about to be laid before the reader, is as comprehensible by persons of ordinary education and mental capacity as the first four rules of arithmetic.

As far as practicable I shall avoid the use of technical phrases, but some are so intimately interwoven with the subjects hereinafter noticed, that it will be impossible to wholly omit them. In reference to these, therefore, as they occur, I will give you such explanation of their legal signification as will enable you to appreciate their value and understand their application.

I have no doubt that you are familiar with the old axiom, that the law provides a remedy for every wrong. Accepting this as substantially correct, which you safely may, I dare say that you have often been puzzled to discover the particular remedy, in a legal point of view, applicable to a particular wrong; upon this point I shall endeavor to inform you as we go along.

Wrongs have been classified under the heads of private wrongs—such as breaches of contract—which, as you probably know, are capable of civil remedies only; and public wrongs or crimes—such as murder, arson, treason, and those offences which we are about to consider—for which the law provides penal remedies. Touching the graver crimes, such as those just mentioned—offences perpetrated for the most part under unanticipated circumstances over which we can have no control, and against which no precaution can avail—it is obvious that a knowledge of the laws by which they are redressed is, as compared to the offences to which the commercial community is mostly subject, of comparatively trifling importance. Hence, I do not intend to here deal with such crimes, but rather direct your attention to the special consideration of matters, a knowledge of which to you, as engaged in business, may be of importance at any moment. But before we go further into the subject, it will be as well that you should clearly understand what, in the eyes of the law, constitutes an offence, and is consequently punishable.

Section 2.—What is an Offence?

An offence, then, is an act committed or omitted in violation of the law, to the injury of the public at large, for which the law provides some punishment or penalty, thereby indicating that the act done or omitted is regarded as a public wrong, for which the transgressor must make atonement to society. You may, therefore, safely pronounce any act or omission to which the law annexes penal consequences an offence, the punishment prescribed implying that the doing or not doing, of such act is a detriment or wrong to the public. And in reference to what act or acts constitute an offence, let me impress upon your mind that no act or acts or combination of acts will constitute any one of those offences about which I am going to treat, unless the acts be the result of, and are accompanied by, a fraudulent and corrupt intention. For example, if A takes your goods, with your consent, intending to pay you their value, but subsequently finding himself unable so to do, makes default, he does you a private wrong; whereas, if he obtains possession of your goods by some trick or artifice, with an

intention, at the time, of never paying you, but wholly to defraud you of them and their value, the law treats this as an offence, and awards a punishment for its commission.

Section 3.—Parties to an Offence

It may be as well to now inform you that all persons who are present, aiding and abetting in the commission of an offence, are, by section 69 of the Criminal Code, equally guilty with the person who actually commits it, and by section 70 of the Criminal Code a person wholly absent at the actual commission of the offence is just as punishable as he whose hands perpetrate it, provided he has previously recommended, counselled, or assisted the actual perpetrator; in such a case he is called in law an accessory before the fact. By section 71 of the Criminal Code any one who receives, comforts or assists anyone who has been a party to an offence, in order to enable him to escape, knowing him to have been a party thereto, is also liable to punishment for being an accessory after the fact. By section 69 of the Criminal Code, accessories before the fact and aiders and abettors are declared to be guilty of the offence itself, and are charged as principals in the first degree.

Section 4.—Persons Exempt From Punishment

Generally every violator of the law is amenable to justice and punishable, but it is as well that we should here pause to inquire what exceptions there are to this rule, for I need not remind you that there are exceptions to every general rule. That the law exempts some persons from its penalties is well known. Reason, justice and mercy warrants every such exception, as I shall presently show you. Blackstone has well said that "the several pleas and excuses which protect the committer of a forbidden act from the punishment which is otherwise annexed thereto may be reduced to this single consideration—'want or defect of will.'" An involuntary act, as it has no claim to merit, so neither can it induce any guilt: the concurrence of the will, when it has its choice either to do or to avoid the fact in question, being the only thing that renders human actions praiseworthy or culpable; indeed, to make a crime complete and cognizable by human laws there must be both a will and an act. A fixed design or will to do an unlawful act is almost as heinous as the commission of it, yet as no temporal tribunal can search the heart, nor fathom the intentions of the mind otherwise than as they are demonstrated by outward actions, it, therefore, cannot punish for what it cannot know. And for this reason an overt act, or open evidence, is necessary in order to demonstrate the depravity of the will before a man is liable to punishment. So, now you see that to constitute a crime against human laws there must be, first, a vicious will; and, secondly, an unlawful act consequent upon such vicious will. Blackstone lays it down as a general rule that no person shall be excused from punishment for disobedience to the laws of his country, excepting such as are expressly defined and exempted by the laws themselves, and Sir William Russell has classified the exemptions from punishment under four heads, as follows:—1, Infancy; 2, Insanity and Idiocy; 3, Subjection to the Power of Others; and 4, Ignorance.

Toy Exhibition at Toronto

First Step Towards the Establishment of a Bureau of Practical Commercial Export Intelligence as Announced by Hardware and Metal Last Week.

FURTHER information has been sent out by the Department of Trade and Commerce regarding the proposed toy exhibition as announced in last week's issue of Hardware and Metal.

The exhibition will open at the Royal Bank Building, corner Yonge and King streets, Toronto, on March 27 at 3 o'clock in the afternoon, and will be open thereafter every week day between the hours of 10 a.m. and 5 p.m. until further notice.

There will be samples of German and Bohemian toys, of toys made in the United States and of toys made in Canada.

The object of this exhibition is to show the style of toys formerly imported into Canada and the toys now being made in Canada and to stimulate Canadian manufacture of the same, and so build up, if possible, a wide and remunerative home industry. The samples exhibited will illustrate the imported varieties which have been in vogue, the substitutes and equivalents therefor which so far are being made in Canada and by comparison of qualities, costs and kinds lead to improvement and variation in our Canadian makes.

This exhibition is designed chiefly as educative. Dealers in toys, makers of toys present and prospective, financial men who may be disposed to provide capital, are especially invited to be present. Any others interested will be welcome.

A toy conference will be held at the Royal Bank Building on Tuesday, March 28, commencing at 10 o'clock, at which papers will be read and discussions had thereon by experts in the toy literature and business.

Practical toy men who have been accustomed to go to Germany regularly as buyers for large Canadian houses will be present to give information regarding the requirements of the Canadian market and the methods followed in Germany.

The possibility of developing an export business in toys will also be considered. The Department of Trade and Commerce has already received several letters from toy dealers in England asking whether they can buy toys in Canada to replace the German toys that have been excluded from the United Kingdom.

THE FARMER AND THE STOVE

A well-fed and prosperous-looking farmer wanted to present his wife with a new cook stove last fall. Looking through the catalogue of a mail order house, he came across a cut of a stove which appealed to him. It was quoted at $30. Thinking he could perhaps get a similar stove from a local dealer for a dollar or two less by telling about the wonderful value of the advertised beauty, he made a special trip to a near-by town. Much to his surprise the dealer had a stove "exactly" like the one in the catalogue.

"How much for the stove, Harry?" he asked.

"Thirty-five," was the reply.

"How much change would you give out f twenty-eight?"

"Thirty-five is the best I can do on that stove. It's a special price at that," returned the merchant.

"Specially high," retorted the farmer. "I can get the same stove delivered here at the station for five dollars less than that. That's where your special price comes in."

The merchant did not for a minute doubt the man's sincerity. After a few minutes' conversation, the name of the mail order house was mentioned. The storekeeper happened to have one of their catalogues, and so looked up the stove advertised.

"There it is, and there's the price," said the farmer, with a bit of a chuckle, as he pointed out a stove which to him looked just like the one the local dealer was trying to sell.

But the dealer could not see very much resemblance. The name was the same. The trimmings very similar. The price was five dollars lower, but in the one case the stove had six holes and in the other there were only four.

Definitions of Hardware Terms

"Base" in Nails Are Sizes Nearest to Steel Rods as They Come From Rolling Mills — Base in Rope and Breaks in Glass Figured From the Average Cost of Manufacture of Those Articles

THERE are a few terms in the hardware trade which are a common stock-in-trade by almost every hardware merchant. By some these terms are understood. To others they are not so clear. They have a somewhat vague idea of the reason for their application. Two of these terms are "breaks" in glass and "base" in nails. These terms are very important factors in the understanding of the way prices are fixed by the manufacturer and importer. At the present time standard common steel nails in kegs are quoted at $3.40 base, Toronto. The base sizes are Nos. 2, 3 and 4 gauge, which are 6, 5½ and 5 inches in length respectively. Once the base price is known the price of any standard size can be obtained by reference to the list adopted by the Canadian wire nail manufacturers on July 10, 1912.

For 4-inch and 4½-inch common nails there is an advance of 5 cents over base. For 3-inch, 3¼-inch and 3½-inch common wire nails the advance is 10 cents over base. For 2½-inch and 2¾-inch the advance is 15 cents. In the 2-inch and 2¼-inch sizes there is an advance of 30 cents. For 1½-inch and 1¾-inch 40 cents is added to base price. On 1¼-inch there is an increase of 65 cents, while on 1-inch and 1⅛-inch the advance over base is $1.00 per 100-pound keg. The gauges of these various sizes can be seen by referring to the reproduction of the standard price list in connection herewith.

Special Nails

For the various kinds of special nails, such as moulding, finishing and casing, flooring, clinch, slating and roofing, etc., there is also an advance over the base prices for the corresponding sizes or gauges in the standard common nails. For instance, by reference to the price list it will be seen that the net extras over the same sizes in common nails is ¼ cent per pound for moulding nails over the corresponding sizes of common nails. This is an advance of 25 cents per hundred pounds. For finishing and casing nails the advance is ½ cent per pound, or 50 cents per hundred pound keg, over the corresponding sizes of common nails. As an example, to find the price of inch and three-quarters finishing and casing nails, it is necessary to add 40 cents to the base price of $3.40, plus 50 cents for extra on this particular kind of special nail. The price would be $4.30 per keg of one hundred pounds.

The Gauges Used

There are a number of different wire gauges used by the manufacturers of wire and nails. The British Imperial Standard Gauge, referred to by the trade by the initials "S. W. G.," is the legal wire gauge of Great Britain. It is the Canadian Customs standard for metal sheets, plates and wire. It is the standard of the Steel Company of Canada, Limited, for steel and wire larger than No. 20. This gauge is sometimes called the New British Gauge or "N.B.G."

In the measurement of copper and brass wire and sheets made for electrical purposes the standard gauge in Canada and the United States is the Brown & Sharpe, "B. & S." The Birmingham Wire Gauge, "B. W. G.," also known as the Stubbs Iron Wire Gauge is used in England as the standard for iron and steel wire and by some makers in the United States. The "B.W.G." gauge is also used by some American makers to gauge hoops, bands and boiler tubes, and by the Carnegie Steel Company to gauge sheets thinner than 3-16 inch. In the United States the most generally used gauge for iron and steel wire is the American Steel & Wire Co.'s gauge, "A. S. & W."

Definition and Meaning of Base

"The base in wire is, roughly speaking, the rod as it comes from the rolling mill," was the way one department head in the wire business defined the term. They are the sizes of wire which require the least amount of drawing to make to the standard sizes. For instance, the five-eighths copper rod as it comes from the rolling mill is manufactured into 4/0 wire. This 4/0 wire is in size .460 of an inch. The half-inch copper rod makes the 3/0 and 2/0 sizes in copper wire. These sizes are respectively .409 and .364 of an inch. The three-eighths wire will make the sizes No. 0 and No. 1, which are respectively .324 and .289 parts of an inch. These sizes it will be seen are a few thousandths parts of an inch smaller than the copper rod as it comes from the foundry. Take the No. 0 size in wire, which is made from the three-eights copper rod. Three-eighths of an inch when reckoned in thousandths parts is .375. When the No. 0 wire is made it is .324 of an inch. This reduction necessitates running the copper rod through the dies three times in the reduction to the proper size for wire.

In the same way five-sixteenths rod will make sizes Nos. 2, 3, 4 and 5 in copper wire, while the quarter-inch rods will make sizes Nos. 6, 7 and 8. Now one-quarter inch rod is the smallest size

Moulding, Finishing, Casing, Flooring, Clinch, Slating, Roofing, Box, Fence, Tobacco, Barrel, Car, Eave Trough Spikes and Sash Pins of the Gauges named above will be charged at Common Nail List, with Extras as shown.

All other Sizes and Gauges will be charged by the Miscellaneous List.

Revised Price List on Standard Steel Wire Nails, Adopted July 10, 1912.

in which the copper rods are manufactured. Three sizes of wire can be made from quarter-inch rod without the necessity of drawing it more than three times. These sizes are consequently considered base sizes. In other words, they are sizes which require no more than three drafts to bring them to their proper sizes of wire. Base sizes on copper wire consequently run from No. 4/0 to No. 8. In the sizes running from No. 9 to No. 40 there is an increasing number of drafts necessary to bring to the required size. No. 9 wire requires five drafts, No. 10 requires six drafts and so on up to No. 40, the smallest size copper wire, which requires thirty-six drafts. In other words, the smaller the wire the greater number of handlings it requires and the larger number of times it must be run through the drawing machines. It is this increased cost in the handling which necessitates an increase in price of the smaller sizes of wire.

This same principle holds good in the manufacture of nails from the steel wire. The wire is drawn from the nearest sized steel rods. For example, the base sizes in steel wire nails are Nos. 2, 3 and 4. These sizes are made from the steel wire which in turn was drawn down from the steel rods as they came from the rolling mill. The smallest size in the steel rods is .212 of an inch. When the wire is drawn to No. 7 size it is .176 of an inch. The reduction from .212 of an inch to .176 of an inch is made in one draft. The three base sizes of nails can be made from the .212 inch steel rods in one draft. Nos. 5, 6 and 7 gauge wire nails also require one draft for each size, but there is a difference in the tonnage which a machine can turn out when manufacturing these nails, hence it is necessary to make an additional cost price on this account. Nos. 8, 9 and 10 gauge nails require two drafts, while Nos. 11 and 12 require three drafts. No. 13 gauge nails require four drafts and No. 14 gauge five drafts. It will be seen that the number of drafts necessary to reduce to the proper size wire for the manufacture of nails, together with the possible output of the nail machines on the smaller sizes, are determining factors in causing extras to be added to the base price.

Formerly Sold by Weight

Nails were formerly sold according to weight with a rough sort of base reckoned on the length of the nail. For instance, the length of the nail was three inches and upwards that fixed the base price. On January 9, 1892, nails were quoted for the last time as: "Nails, cut, 3 in. and upwards, per keg base, price $2.40." During January of that year the various nail manufacturers arranged among themselves a new schedule of prices which was designed to eliminate the odd sizes in nails and confine their energies to a few standard sizes. In referring to this matter editorially at the time "Hardware and Metal" said:

"There are some three hundred sizes made. It is a humane thing to endeavor to run the demand in a few channels and put the odd gauges out of stock. The sizes whose survival is sought to be secured by the selecting principle of comparatively easier prices are on the basis of the iron nail." That is, the manufacturers were endeavoring to run the steel wire nails and the cut nails into corresponding sizes which would be standard. Before the adoption of the base method of fixing prices, wire was sold at list prices, less a discount for the smaller sizes. In the same way nails were sold at list prices less a discount.

How Pennyweight is Reckoned

Prior to the adoption of the base system nails were sold according to weight with extras added for certain smaller sizes of nails. This was the old English system of selling nails. The first nails made were the cut nails, which were made by hand, being cut from a sheet or strip of wrought iron fed into a cutter and turned by hand for each nail manufactured.

In connection with the weight of nails it is interesting to note that a pennyweight is part of the Troy system of weights. There were twenty-four grains to a pennyweight. Each grain was originally equal in weight to a grain of wheat from the middle of the ear, well dried. This weight was in ancient times equivalent to the weight of a silver penny, whence the name. Twenty pennyweights make an ounce.

Base on Rope

In the manufacture of rope there is also a base size. The smaller the rope the more it costs to weave. Five-eighths inch size is considered the base by all rope and twine manufacturers. The five-eighths size is composed of three threads of eleven strands each. It is possible for a machine to make approximately 1,000 pounds of this rope per day. On the other hand with the three-sixteenths rope the strands are finer than strands in the five-eighths. In the manufacture of 3-16 rope it is possible for the machine to turn out only 80 pounds of rope per day. It will be readily seen that an extra charge must be made for a rope which takes so much longer to make. As in the case of wire the base for rope is the size in which the average cost of manufacture from the raw state is reckoned.

LIST PRICES ON VARIOUS BREAKS OF GLASS

Bracket.	Single Thick, Per 100 ft. Box.	Double Thick.
Up to 25	$ 7.80	$11.90
26 to 34	8.15	12.85
35 to 40	8.50	13.60
41 to 50	11.75	15.50
51 to 60	12.25	15.85
61 to 70	13.10	16.80
71 to 80	14.75	18.35
81 to 84	.....	22.75
85 to 90	.....	24.65
91 to 94	.....	25.00
95 to 100	.....	29.00
101 to 105	.....	32.00
106 to 110	.....	37.00

Breaks in Glass

In the cutting of glass there are certain sizes which correspond in a rough sort of way to the base sizes in wire, nails and rope. For instance, all sizes of glass which in their measurements total to a certain standard are considered as coming within a particular "break." There are thirteen "breaks" or sizes ordinarily used by manufacturers and dealers. The first break is in any sizes which in their combined measurements when added together make up to 25 inches or less. In the second break are the sizes which come between 26 and 34 inches.

The various breaks or brackets in glass were fixed arbitrarily many years ago by manufacturers of glass in Europe. They were introduced into America by the first makers of glass on this continent and have been retained ever since. In the blowing of glass, imperfections, such as bubbles, are incident and uncontrollable. In the selection of these larger sizes it becomes necessary to have a greater wastage of glass in cutting the various sizes. Hence it becomes necessary to make an additional charge for the larger sizes.

There are two methods of blowing sheet glass, namely, hand-blown and machine blown. The maximum sheet of hand-blown glass is approximately 40 by 60

inches. In machine blown glass the great cylinder is from fifteen to twenty feet in length and about three feet in diameter.

Since the outbreak of war there has been an approximate increase in the price of sheet glass of 14 per cent. As yet there has been no increase in the price of pane glass, the price remaining practically the same as two years ago. This has been due to the amount of stocks on hand at the beginning of the war, and also to the expense attached to the getting out of a new price list. A new pane list is now in process of preparation on pane glass and will probably be issued within the next two or three months. If there is prospect of peace in the interim the old list will possibly remain unchanged. Almost the whole of the glass used in Canada at the present time comes from the United States. Prior to the war the best grade of glass was imported from Belgium. France also sent some glass to this country. In sheet glass there are two weights commonly used in the trade, namely, Star and Double Diamond, or Single Thick and Double Thick, respectively. Star sheet glass weighs 16 ounces to the square foot while Double Diamond weighs 24 ounces to the square foot.

ADVANCES OVER BASIS ON ROPE

2 inches, cir. (5/8 in. dia.) and larger	Basis		
Under 2 inches, cir. (5/8 in. dia.) down to and including 1 1/4 in. cir. (15 thd. or 7-16 in. dia.)	1/2c	per lb	above basis
12 thd. or 3/8 in. diameter	1c	"	"
6 and 9 thd. or 1/4 in. and 5/8 in. dia.	1 1/2c	"	"
Fine 6 thd. or 3/16 in. dia.	2c	"	"
Lariat Rope, 3 strand	1 1/2c	"	"
Lariat Rope, 4 strand	2 1/2	"	"

The above show the advances over the basis on best Manila rope on the popular selling sizes. Figuring on a basis of 21 cents, it will be seen that the cost of all sizes 5/8 inches in diameter and over would be 21 cents per pound. On smaller sizes advances would be made, for instance, on 3/8 dia. rope the advance is 1c per pound above basis, which would make the price 22 cents per pound.

Essentials of Stove Salesmanship

An Adequate Display and Attractive Demonstrating Floor, Proper Line and Variety, An Efficient Sales Organization Well Primed With Talking Points and an Advertising Plan Are Some of the Requirements

HOW many hardwaremen have put much thought on the best way to sell stoves? It is one of the important branches of almost every hardware store, for the profits are comparatively large on each sale. Furthermore, a good line of stoves are always steady sellers. But no matter how good the stove may be, there may be lacking the very necessary qualities of salesmanship to put the stove in the home of the prospective customer. It is really a high art, this helping a customer to make up his mind to buy your particular line of stoves. It is not always an easy matter to persuade him to buy a stove from you. For the expediture which the man or housewife is going to make is what might be termed an extraordinary one. There are few purchases in the home as large as $50. When the time comes for making them the dealer can take it for granted that the man who has $50 to spend is going to look around pretty well before he makes up his mind. It rests with you—with your methods and salesmanship whether or not you land him high and dry.

Good Sales Methods Necessary

You may have a line of stoves that are infinitely superior to your competitor. But if you have not good methods of salesmanship the other fellow is going to win out. That is, of course, providing the other fellow's methods are better than yours. If they are equally poor it then becomes a toss-up and largely a matter of luck who will secure the sale. But it is seldom that two dealers are so evenly matched. At any rate it will not pay you to take a chance on your competitor being a poorer salesman than yourself. You should be the best and know why you are the best.

Should Map Out Plan of Attack

It is not sufficient that you have a jumble of stoves in one part of the store which you may call the "stove department." Stoves should be set up to best advantage in a special part of the store. A room that is littered with a great variety of articles such as pipes, elbows, brooms, ash cans, wire and other things will never show the goods off to best advantage. It is very necessary that you consider well, how best to arrange your display of stoves. A stove that is not ready for sale cannot be sold for face value until some tidying up is done. You should remember that you are not selling nails or bolts or some other commodity, one sample of which looks like all the remainder.

Selling Points in Salesmanship

There are three points of attack which the salesman should bear in mind. These are the life-lines of trade—the grappling hooks that land the sale for the dealer. They are: (1) An appeal to pride and reason; (2) An appeal on the basis of economy; (3) An appeal on the efficiency of the stove. A dealer's argument should be directed along these three lines. Furthermore, every clerk in the store who will have anything to do with the selling of stoves should be taught that his arguments should bear along these lines.

In the first place, an appeal to the pride of a prospective customer always puts the salesman in the good graces of the one who is about to buy. If the prospective purchaser is a man it will be necessary for you to suit your attack to his particular case.

The good points of your stove should be well thought out. In this the manufacturer should and will, if requested, come to your assistance in supplying the ammunition. An appeal should be made on the grounds of the economy of your particular line. Of course, it is necessary for you to get a line that you have confidence in and that you believe to be the best on the market. Primed with a wealth of talking points along the line of economy advantages to be secured through the purchase of your particular stove, you have a very substantial groundwork on which to build up a trade.

Important Features

Then the third point of attack is in the matter of efficiency which your stoves possess. If they will bake a bet-

ter pie or a better loaf of bread than any other stove you should see that this point gets to your prospective customer. If they are the best heating stoves on the market you should know why. And you should not tire of reverting to these very essential features about a stove. When a purchase to the extent of $50 is made the customer expects to get satisfaction. Furthermore, you should be able to direct that customer in the best way to get the maximum efficiency from that stove.

Should Know All About It

It is not sufficient that the salesman should be able to talk about these matters in a grandiloquent way. He should be able to give a complete demonstration. He should not be able to sell a stove and keep his hands clean. The customer wants the stove taken to pieces, particularly if it is a high-class article, so that he or she will see just what they are getting.

In this connection it is very necessary that the dealer should give good service in order to back up his selling plan

Value of Advertising

There is one other particular in which the dealer should aim to become efficient in the salesmanship arm of the stove business. It is a most important department. The right kind of advertising means a widening of the scope of your salesmanship. The writing of an advertisement becomes one of the really vital points in connection with salesmanship. Few salesman, no matter how good they may be when they have their customer before them, can write an ad. It means extraordinary selling ability because you do not know who you are talking to. It requires a technical knowledge in order that you may get the right amount of material in proportion to white space in your advertisement. You must know what kind of cuts to use. You must get a proper typographical arrangement and a heading that will jump out and catch the eye. You must realize that your ad. will be one of many in the paper in which you advertise. You will need something that has a drawing power. In this connection you will be able to get some valuable suggestions in connection with stove advertising in the article in this issue entitled: "Does Your Advertising Pay."

Summing Up

To sum up: Good and successful salesmanship essentials will embody (1) A proper location for the stove department (2) A proper line and variety (3) Efficient sales organization (4) Demonstrations (5) An enthusiastic knitting together of all these essentials. If the boss has service at heart and is a well of enthusiasm, this is the most contagious thing in the world and every single part of the plan will pull. This is the key to the whole problem and the essential for welding the whole into a successful business scheme.

A Big Field for Hardware in Russia

Vice-President of Large Russian Shipping and Mercantile Company is in Canada to Point Out to Manufacturers Opportunity to Secure Part of Great Export Trade—Will Run Line of Steamers to Montreal—Many Lines of Manufactured Products Needed

"I WILL deposit to the credit of the Canadian Patriotic Fund $1,000 if after careful examination by our engineers we are unable to find a market for the product of every one of the plants which are now engaged in the manufacture of munitions in Canada," declared R. C. Martens, vice-president of R. Martens & Co., Inc., of Petrograd, shippers and mercantile engineers, to a representative of Hardware and Metal at the Queen's Hotel, Toronto, this week. Mr. Martens is in Canada for the purpose of trying to stimulate Canadian manufacturers to take advantage of the great commercial opportunities which Russia will offer immediately at the termination of the war. The firm of which Mr. Martens is vice-president is transportation agent for the Russian government in England and agents for the British Admiralty at Archangel.

In addition to their headquarters at Petrograd this firm has branch offices at Moscow, Archangel, Odessa, Baku, Vladivostok and New York. His company will start the operation of a line of steamers from New York to Archangel next month and as soon as the Black Sea is opened to traffic again he stated they will open a line of steamships between Odessa and New York.

"I am not here for the purpose of securing munitions of war," said Mr. Martens. "But I do come to secure munitions of peace. Your manufacturers here in Canada have a wonderful opportunity if they will but seize it. If we find there will be sufficient trade in sight from Canada we will establish a line of steamers to call at Montreal in connection with our New York and Odessa and New York-Archangel lines. Canada is one of the Allies and naturally Russians will feel partial toward them in the matter of trade at the conclusion of the war. Before hostilities broke out Russia imported annually products to the value of $700,000,000. Of this amount over one-half came through Germany, or to be exact, $356,000,000. Of this amount in turn about $100,000,000 came from the United States. For Germany constituted herself the middleman in the articles she was unable to supply, secured them in the United States, and sold them at a handsome profit to the Russian people. This trade has been shut off entirely by reason of the war.

"Large quantities of agricultural machinery, sawmill machinery, machine tools, woodworking tools, coal mining machinery, gold mining machinery, metal mining machinery of all kinds, hardware articles of every description will be needed. I am confident that all the machinery which is now being utilized in the manufacture of war munitions can be turned to immediate use in the manufacture of these articles. So confident do I feel that this can be done I will do as I have already stated, namely, that I will pay to the Canadian Patriotic Fund one thousand dollars if after a thorough examination of these plants by our engineers we are unable to direct the manufacturer into lines in which he can find a ready market in Russia.

"I would advise that the Canadian manufacturer should immediately send capable experts to Russia who are thoroughly conversant with the technical side of the manufacture of their goods to make a study of the needs of a particular district. We will be glad to cooperate with these representatives through our engineering staffs at our various branches. If manufacturers feel they are unable financially to send representatives we will place our engineering staff at their disposal if they will send to us six of their catalogs, one for each one of our branch offices, in order that our engineers at those points may go over the catalogues and advise them of the adaptations necessary in their product to make it acceptable to the Russian market. The time to prepare for this market is now. It will perhaps be too late if postponed until the end of the war. The United States has already many hundreds of their clever young experts in the field."

Mr. Martens stated the Export Association of Canada, would work in cooperation with their company to this end. The Robert Reford Co., Limited, Montreal, will act as the shipping agents of the company in Canada. Mr. Martens was met by a number of prominent Canadian manufacturers while in Toronto who inquired anxiously of the prospects for trade in Russia.

How Other Merchants Do Things

Various Ideas Adopted by Retailers to Keep Down Expenses and to Display Goods More Effectively—Periscopes For Cellar Lights—Electric Light Demonstrators — Using Pillars

From notes gathered by Hardware and Metal representatives in calls on retailers.

IN the cellar of an Ontario hardware store there is a periscope arrangement of mirrors that makes a cheap and very efficient lighting system. The idea has been to utilize the light which has been cut off by the peculiar structure of the cellar and not only to utilize it but to intensify it.

The problem is here solved by swinging from the ceiling a cheap mirror set in an ordinary three-foot square window sash at an angle of forty-five degrees from the perpendicular and directly facing the small window. A duplicate of this mirror is placed or swung at a point on or near the floor, directly opposite and of course below the upper mirror and at a corresponding angle of forty-five degrees. The essential point is to have the lower mirror in true alignment with the upper and at the same time clear the interfering obstacle which in this case is the bulk of the swing shelves

The proprietor in illustrating the working of the mirrors turned the light off and on as completely as though by an electric light switch by simply tilting the mirrors so that no reflection was possible. He said in part:

"This keeps down lighting bills, needs no attention and is working all the time without a cent of cost after the initial installation which can be made for the sum of two dollars. Also when a clerk goes into the cellar, it is already lighted up; there is no bruising of shins and injury of feelings fumbling about in the dark for light switches."

* * *

ELECTRIC LIGHT AND BULB DEMONSTRATOR.

In the same store the inventive genius of the management has created a special display for electric light bulbs that is unsurpassed as a demonstrator. It consists of a dark stained board about three feet long in which are set electric light sockets to accommodate sizes of bulbs from four candle power up to two hundred in size. The wires are hooked up with the store lights and the arm of bulbs is then affixed to the wall in any convenient place ready for a practical demonstration and comparison of the relative strength of the various bulbs. In the store in question the arm is hung in the front of the store, near the door and at the level of the eyes from the floor. The same switch that controls the bulbs connects up with other lights in the show cases. To avoid people bumping into the projecting arm it is hung from a point that will enable it to swing over the show case well out of harm's way.

* * *

COUNTER INSETS

No circular reaches a more interested public than the one inset in the counter of this store. It is a special bargain circular about two feet square, set in the counter and covered with a sheet of heavy glass. Every man who is served at that counter must see it and absorb its statements of bargains.

* * *

MARKET BULLETINS IN THE STORE

An originally commonplace method is employed in this store to acquaint the clerks with market changes, stock shortages and other matters of moment that would be neglected entirely or else require to be made the subject for separate consideration each time by the head of the firm.

This daily bulletin as it is called is simply a typewritten slip of paper containing the salient news items for that day and is tacked up in a central part of the store well out of the way of the customers. It is a great saver of time that is usually consumed in unnecessary questioning, looking up of quotations, reserves of stock, etc.

* * *

INDIVIDUAL DISPLAY BOARDS

This store uses individual display boards of various sizes and shapes to great advantage in covering up unsightly waste places with attractive displays of small tools, fixtures, accessories, etc. An ugly spiral staircase of iron is completely hidden by display boards of about two and a half feet high by one foot wide.

* * *

STOCK SERVES AS DISPLAY RACK

Harness hooks are used to advantage in this store for the display of tools in a silent salesman space inset in the wall. Thus, they serve the double purpose of demonstrating their own use as well as supporting a display of saws, hammers, squares and other tools.

* * *

GIVES NAMES OF FENCE BUYERS

Torrens' hardware, Tillsonburg, Ont., recently ran a striking advertisement featuring woven wire fencing. After telling of the good qualities of the fence offered for sale a list was given showing the names of farmers (90 in all) who had purchased some of the fencing advertised. One of the strongest talking points in the advertisement appeared in the introductory talk and ran as follows:—

"If you want to buy the best Stock Fence, buy the ——— with Upright Wires 12 in. apart, all full gauge No. 9 wire. A calf cannot get its head through this spacing (6 in. x 12 in.) and it is generally admitted that most wire fences now in a broken-down condition were damaged by cattle or horse reaching through the wide open spaces. Ask some of the farmers, whose names are below and who have tried out this stock fence if their stock ever get their heads through into the next field.

A great number of these farmers have had hundreds of rods of this fence, bought at different times within the last five years."

* * *

GUN METAL RACKS

The Northern Canada Supply Co., Cobalt, and Haileybury stores use cheap racks of gun metal to great advantage in using up odd corners of floor space for the display of household utensils.

* * *

RECORDS GOODS ASKED FOR

A Hamilton, Ont., retail hardware merchant has made it a rule that all salesmen keep a record of all goods which are asked for by customers and which are not in stock.

A special form is placed on a table near the cash register and serves as a memo pad on which all goods which cannot be supplied to customers are recorded. The records are checked up weekly, and in this way the proprietor can very often see where new lines can be profitably added.

UNSIGHTLY PILLARS A BLESSING IN DISGUISE

The Jas. Walker Hardware Co. of Montreal, have solved the problem of how to make unsightly posts and pillars attractive. The principal one in this store stands just at the entrance squarely in front of the door. If let alone it would be most unsightly for it is directly in the path of any one entering.

This last fact is turned to great advantage. Facing the door is an attractive folder rack which is permanently affixed to the post. Over it is the word "Free" in large white letters. Above and below this rack and on the other three sides of the post for more than the height of a man are hung small green baize covered display boards which are cut out to fit the post and can be taken off and rehung whenever a rearrangement of display is needed. These racks contain displays of small tools, rings, chains, bright looking specialty lines, etc. The upper part of the post is used for the most attractive calendars and for special circulars. The point about this display is this: The store is apparently an old one and this post is one of the disadvantages that go with an old building, but what would in the natural course of events be a handicap to the appearance of the store is turned into a Sales Asset.

This firm also uses the design display idea to great effect on its walls, shelves, etc. The low wall of the balcony is made to serve as the background for designs of generous proportions in the larger sporting goods such as hockey sticks, skis and snowshoes.

In this same store a clever use is made of articles to be displayed as display equipment. In a window lined with yellow cloth a fire screen of three by one foot leaves that hinge on one another is used to great advantage as a background for the smaller articles of the display proper. The screen is of heavy black wire, made up into quarter-inch square spaces. It stands out magnificently against the light yellow cloth, displays itself to best advantage and adds a real touch to the whole window.

TURNING A FURNACE INTO A DISPLAY STAND

One of the most striking illustrations seen of the use of waste display space was in the store of the late Frank A. Child, at Cochrane. In this cold climate elaborate heating arrangements must be made. So Mr. Child placed a large furnace in the centre of the floor in the main store interior. Now, a furnace is not exactly a thing of beauty. Still people buy them. Thus he reasoned.

So a fifty cent can of aluminum paint was used on the galvanized iron of the furnace and its rusty surface was turned into a glittering silver that actually added to the lighting arrangements of what is naturally a dark store interior. That was the first step to make it attractive. The next was to make it useful in other ways than as a mere furnisher of heat. So it was featured, pointed out and made noteworthy as a continual demonstration of the line of furnaces carried there. The effect on sales of furnaces in that cold country was most astonishing.

Thus one phase of the furnace reasoning was covered. People bought them. The next thing was to convert this one into a thing of beauty. So, in the summer time the unnecessary pipes are taken down and the shelves brought out and fitted up around the furnace so that it becomes the central display spot of the whole store. These shelves are usually used for alternate displays of paints and varnishes, tin, granite and aluminum ware, etc.

SAMPLE DOORS WIDELY USED

A hardware store in the northern part of Ontario devotes an unusual amount of space to the use of green baize-covered sample doors. A series of them five feet high by one and a half feet wide extends the fine length of one side of the long store and it is this very general use of them that is unusual in this store. It is stated that they are the greatest time-savers in the store especially in the handling and sale of files and other similar goods that include a wide range of sizes and values that require constant showing. Cutlery, screw drivers and all small tools, locks, builders' hardware, bath room fixtures, fish lines, and paint brushes.

A feature of this store is the prominence given the paint display to which the front of the store is given over. The manager states that it has been their custom to store paints in the rear but that on comparing costs and sales it was found that a line of goods which represented a large amount of money was recording proportionately less sales than other less deserving lines. So the latter were relegated to the rear and paints given first place.

The management of this store lays great stress on the practical value and added sales to be obtained from the use of simple but attractive wooden frames and cases of their own construction for the display of goods. These are made in their spare time by the clerks and made to fit into odd corners, etc. Paint and varnish is used liberally in finishing them. The most ambitious case of this nature is a large flat box of small compartments for the display of paint brushes. This box is about ten feet long and is the full width of the counter on top of which it sets. It is about three inches high in front and slopes up to a height of ten inches in the rear. Each compartment contains a selection of brushes of some one size. Mr. Childs says, "In the past two years since we have been using this home made case we have sold five times as many brushes as we ever did in any corresponding period."

THE LESSONS OF A GENERAL SURVEY

In the course of a great number of good stores visited and examined closely for new ideas it was found that the greatest importance was attached to some points that were common to all of the best of them although lacking in others. Thus a generous use of display boards of all sizes and shapes and the consistent use of green baize covering is advocated. It is affirmed that other colors and material are not as effective in showing off goods. The importance of catchy signs on the walls is reaffirmed. Plain large figured price cards on all goods even in the best of show cases are regarded as necessities. Designs, figures, etc., especially in tool displays, are highly recommended.

The general use of waste display space is advised by all classes of dealers even though only the most energetic of them act on the advice. It is pointed out that simple and attractive cases can be made in spare time and so decorated and finished with the stores' stock of paints and varnishes as to not only show off the contained goods but so as to demonstrate the value of the articles that went into the construction of the case.

The further necessity of converting liabilities into assets by which is meant the covering up of unsightly parts of the store with suitable displays.

The importance of bringing a little imagination and originality to play on these problems is recognized by the most successful exponents of the ideas here set forth. The use of mailing lists compiled from all available sources, such as voters' lists, house-owners, lists of organizations and society members, etc., is urged as a valuable aid to the sales of any line especially when undertaken in conjunction with manufacturers, etc. Addresses of small householders are particularly valuable for live mailing lists for the pushing of every line.

The value of this field of endeavor is well known, the variety of it but slightly suspected. The size of waste space development in any store is in direct proportion to the amount of waste brain space development in the store's manager and staff.

Saving Time in Retail Stores

Innovations Introduced by Retail Firms to Improve Efficiency of Sales Staffs, and Service to the Public—Following the Example Set by Chain Drug Stores —Novel Display Methods.

Written for Hardware and Metal by Thos. E. Hunt

THE merchandising of hardware is a man's job, requiring a great deal of experience and application not demanded in some other lines of trade. The business of competition in various forms is felt to-day to a greater extent than it has ever been in the past. The lines sold by the hardware trade are constantly changing and expanding. The hardware business is in many respects a different business to what it was twenty or even ten years ago. The merchant is confronted with new problems almost every week. Costs of doing business are higher. Wages are much higher than they were ten years ago. The clerk who worked for ten or twelve dollars per week ten years ago now demands $18 or $20 per week. Not a great many years ago it was rather unusual to hear of a hardware clerk drawing $20 per week. To-day $20 per week is an ordinary wage. Some clerks draw $20, some $25, and other higher amounts per week. Some work on a straight salary basis. Others are paid a salary plus a percentage on sales over a certain amount.

The result is that the merchant, confronted with high pay-rolls, high rents, and narrow margins of profit, is, in fairness to himself, compelled to secure the greatest degree of efficiency from his sales staff and from the premises for which he is paying a high rent.

Saving Clerk's Time

Unfortunately for some retailers ther is a great deal of time lost in retail stores. It is not uncommon to see a $20 a week clerk rushing down to the basement to fill a pint bottle with oil, for which he will receive 15c, or digging into a putty can to secure a pound of putty, while customers are standing in the store waiting for attention. One of the greatest leaks in the hardware store to-day is the loss of time during rush periods, occasioned by senior salesman having to package up goods which are called for almost every day.

Lesson From Chain Stores

The average retailer can take a splendid lesson from the chain stores, especially the chain drug stores. In these stores you will find a huge volume of business being transacted by a very small staff, simply because they anticipate the needs of the public, and during the slack periods they prepare packages of staple goods, which the public will ask for. If the chain drug store advertises three cakes of soap for a quarter on a certain day, you will always find that the soap has been packaged up prior to sale day, and the salesman loses no time in handing out the parcel when it is asked for.

A Case in Point

Not long ago a retailer was offering some special bargains for Saturday selling. A list of goods was advertised at special prices. One special was nine pounds of 2½ or 3-inch nails for a quarter. Fifty 25c lots were sold, and fifty times on that rush day the salesmen were compelled to go to the nail counter, and on each trip package up nine pounds of nails. Think of the waste of time that would have been saved if the nails had been packaged up in spare time on Thursday or Friday, or by one of the junior clerks.

Display stand built around supporting pillar in hardware store of G. A. Binns, Newmarket, Ont.

How Time is Saved

There is a hardware merchant in an Ontario city who has tried hard to follow the example set by some of the chain drug stores.

This merchant does a large paint trade during the spring and fall. Every hardware merchant knows that during the spring painting season he is called upon to put up dozens of bottles of linseed oil and turpentine. A customer will drop in, buy a quart or half-gallon of paint—a brush, if the clerk suggests it—and then ask for a pint of linseed oil or turpentine. Invariably the customer does not have a container of any kind for the oil and expects the merchant to supply one. In some stores the clerk who waits on the customer is compelled to rustle around the cellar, find an old bottle, fill it, wrap it up, and send it out with the order. In other stores the order is turned over to a junior clerk, upon whom devolves the duty of seeing that the order is put up and sent on to the delivery wagon. In most department stores such staples as oil, turpentine and linseed oil, are put up in tin cans, labeled with the department store's name and price.

The Ontario merchant referred to in the foregoing, secures his bottles from junk dealers or bottle dealers, who can be found in almost every town or city in the country. The bottles must all conform to certain shapes, so that there will be uniformity in the containers. The price paid for the bottles ranges from 12c to 20c per dozen, according to the class of bottle. All bottles must be washed and in good condition when received by the hardware merchant. They are then filled with raw or boiled linseed or turpentine as the case may be. A neat label, bearing the name of the contents of the bottle, name or merchant, street and 'phone number is placed on each bottle. The price is also marked on a corner of the label.

It is the duty of one of the junior clerks to see that there is always on hand a good supply of

Mounted samples of builders' hardware in the Sault Ste. Marie, branch, Cochrane Hardware Co.

pint bottles of raw linseed oil, boiled linseed oil, and turpentine. The same applies to the quart size.

The average customer, when buying paint, will say: "I need some oil or turpentine for thinning." The clerk will reply: "We have pure linseed oil already done up in labeled bottles at 18c for the pint size, and 35c for the quart size." Almost without exception the customer will order one of the sizes mentioned, and the clerk with no loss of time can complete the order and place it in a box ready for the delivery man. Such, however, is not the case when the clerk has to make a trip to the basement hunt up a bottle, trim a cork to fit, fill the bottle and then return upstairs with it, probably at the expense of keeping several customers waiting. The labels on the bottles, with the merchant's name, street, and phone number have proven a good advertisement which is always in evidence as long as any oil or turpentine remains in the bottle, and it is kept by the customer.

Nails in Packages

Nails are also put up in cardboard boxes, 7lbs. to the box. Nails are sold in this store at 7 pounds for a quarter, that is for the sizes called for mostly, ranging in size from 1½ inches to 6 inches. A great many customers, particularly farmers, are regular buyers of

Style of display and stock table used by T. Eaton Co., Toronto.

nails, and as a general rule, a quarter's worth at a time. When a customer enters and asks for a quarter's worth of 3-inch nails, and the same quantity of 2½-inch nails the salesman simply picks out two packages from the shelves and the order is filled in less than half a minute. Contrast this with the system or lack of system of having to go to the nail counter and packaging up a quarter's worth of nails every time a customer asks for them.

The boxes are made of heavy cardboard and bear the firm's name with street and phone number.

Wood Alcohol

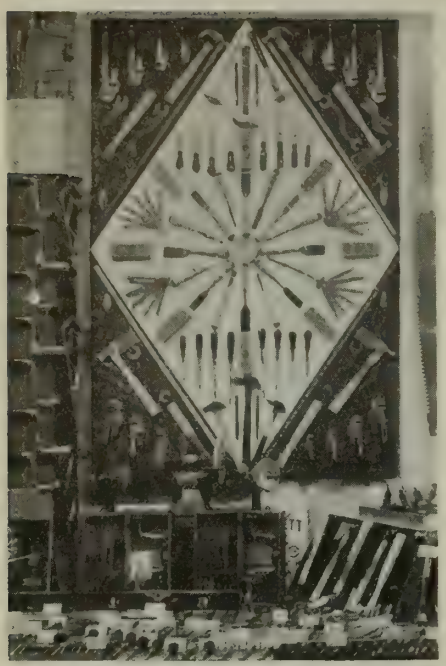
Wood alcohol is also done up in bottles, which are sold at 30c. for the pint size and 50c. for the quart size. The bottles bear the label required by law, giving the firm name, and the words, "wood alcohol, poison," in black letters ¼-inch in height. Alcohol is not called for as often as nails or oil, but nevertheless the bottles are always ready and the clerks can fill the customer's order on very short notice.

Plaster of Paris is also done up in 5 and 10 cent packages. During the spring, when painting and housecleaning work is under way, there are many calls for small lots of plaster of Paris. It is a great time saver to have the plaster done up in popular sized packages.

Row of self-serve tables in the Hudson Bay Co. store at Winnipeg, Man.

Electric signs are used in Mills Hardware Co. store at Hamilton, Ont., to direct customers to various departments.

Special shelf stands are used for displaying cutlery in the hardware department of the Stanley Mills Co., Hamilton.



Portion of window background trimmed before placing in the window.

Putty is stocked in 25, 50 and 100 lb. drums, as well as in bladders. Small tins holding about a pound are kept in stock for customers wanting a small quantity. Putty sold in this way is priced higher than the bulk putty, but the point is made that the putty will not harden in the tin vessel as rapidly as it will when wrapped in paper.

Stove cement is also done up in 1-lb. packages and time is also saved when customers ask for this article. White lead in oil is also stocked in 1 and 2 lb. tins, thus obviating the necessity of hunting around for suitable containers when customers ask for small lots of white lead.

Moved the Wash Room

A Hamilton, Ont., merchant who has a store over 100 feet long, with an entrance to the cellar at the rear of the store, found that clerks lost a great deal of time when they visited the wash room which was located at the front of the basement. To start from the front of the store, visit the wash room and return meant a walk of over 400 feet by the clerks. In the store, where six clerks were employed, considerable time was lost. The wash room was moved to the rear of the main store interior and the distance was cut in half.

Good Displays Save Time

In addition to saving clerks' time by having goods done up in popular selling sized packages, a great deal of time can be saved by having the stock attractively displayed in such a manner that it can be quickly shown to prospective purchasers.

One of the illustrations accompanying this article shows how the Cochrane Hardware Co. at the Sault Ste. Marie branch shows wrenches and builders' hardware. Mounted samples of store, front door and inside lock sets are attractively shown in a recess in the wall shelving. The customer can, at a glance, see the whole array of samples. At the same time it is possible to lift out any individual sample for the customer's inspection.

Wrenches of various kinds are shown on the face of a large sliding door, behind which the reserve stock is kept.

Tables for Household Goods

Another illustration shows the style of display tables used by the Hudson's Bay Company, Winnipeg, to feature household hardware and kitchen utensils.

The tables are double deckers, the top portion is partitioned off to hold articles of various designs and prices. When the sales staff is busy, many customers while waiting will examine the goods thus displayed, and quite frequently sell themselves.

Signs in Departments

In the Mills Hardware Co., King Street store, at Hamilton, electric signs are used in the various departments in the store. Two signs—one in the cutlery department and another in the paint department—are shown in one of the accompanying illustrations. Similar signs are used in the tool department and builders' hardware department.

The signs are suspended from the ceiling, and can be easily seen by the customer upon entering the store. Customers are very frequently directed by the signs to the department in which they are interested.

In order to facilitate the rapid handling of kitchen utensils, the T. Eaton Co., Toronto, uses a very practical type of display table shown in one of the accompanying illustrations. Utensils of various kinds are displayed on top of the table, while the four divisions below are used for carrying surplus stock. A large number of these tables are used in the basement of the Eaton store at Toronto, and are visited by several thousand people each day. Prices are all marked in plain figures. In hundreds of cases customers select the goods without the aid of the sales clerks, the latter having only to take the money and have the goods parceled.

Showing Cutlery Effectively

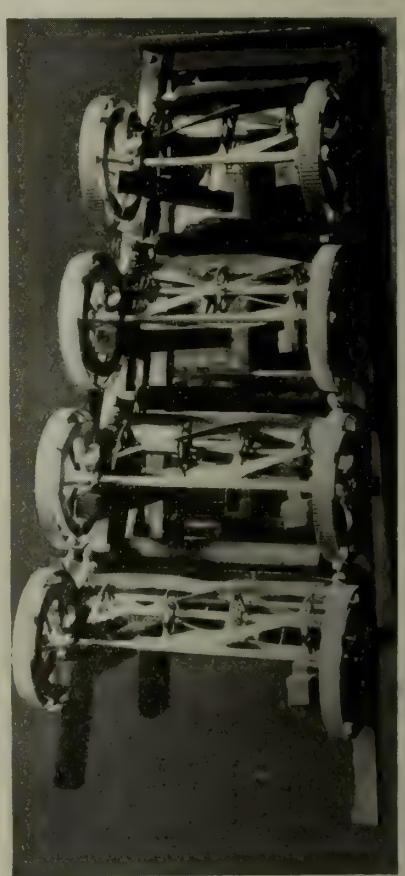
In the hardware department of the Stanley Mills departmental store at Hamilton special provision, has been made for attractive displays of cutlery. One of the accompanying illustrations shows an attractive display of table cutlery and shears in a silent salesman. Special shelf display stands covered with green baize have been used effectively in the silent salesmen. These stands are simply constructed, consisting of three pieces of wood, the face of the stand being placed on an angle, thus raising the knives, shears, etc., in such a manner that the entire display can be easily seen by customers.

Lawn Mower Rack

During the spring and summer season a lawn mower display stand is located inside the main entrance to the M. Phibin Hardware Co. store, 362 St. Catherine Street W., Montreal. The rack, shown in one of the accompanying illustrations, is in design very similar to a step ladder, with supporting bars extending across the uprights for the purpose of holding the mowers. The stand holds eight mowers, and always attracts the attention of customers entering the store.

Using Waste Space

What would otherwise be waste space has been utilized by G. A. Binns, hardware merchant, Newmarket, Ont., as shown in one of the accompanying illustrations. A very creditable display stand has been erected around a supporting pillar. The stand is used for displaying butcher and French cooks' knives, electric toasters, irons, thermos bottles, tools, etc. A large variety of goods can be shown at one time, and the displays are changed to suit the prevailing seasons.



Lawn mower display stand, holding 8 lawn mowers in hardware store of M. Phibin Co. hardware store, St. Catherine St., Montreal.

Laws That Govern Retail Sales

Extracts From Dominion Laws With Which Every Retailer Should be Familiar—How Goods Should be Packaged to Conform With Law—Penalties for Non-Compliance

From information secured by a Hardware and Metal representative in interviews with officials of Inland Revenue Department and Department of Justice.

INQUIRIES very frequently reach the office of Hardware and Metal asking for information regarding the law governing sales of such lines as Paris green, wood alcohol, arsenate of lead, ammunition, firearms.

The subjects have all been treated in past issues of this paper, but in this issue a summary is given of practically all legal restrictions which the retailer encounters when selling ordinary hardware lines over the counter. During the past year police authorities and inland revenue officials have been very active in their efforts to enforce the law. A fairly large number of prosecutions have been instituted and convictions secured, resulting in fines being inflicted on those who, in most cases unintentionally have run foul of the law. It is important, therefore, that every hardwareman should acquaint himself with the provisions of the law as outlined in this article. It is also important that clerks in the store should become familiar with the provisions, because the merchant is always held liable for sales made by the clerks.

Name of manufacturer or person putting up the package

PARIS GREEN

POISON

Name and address of retail firm selling poison

How to Sell Paris Green

There is no law prohibiting the sale of Paris green in hardware stores, provided the Paris green is put up in well secured packages, distinctly labelled with the name and address of the person preparing or putting up such packages, the name of the poison, and marked poison.

There is a further provision (sec. 33) of the Act, which requires that when poisons are sold at retail, the package shall bear the name and address of the proprietor of the establishment in which the poison is sold.

Some retailers buy their Paris green already packaged. Others buy it in drums and have it packaged by the clerks. When the Paris green is packaged by the manufacturer, the latter usually has the package stamped in the proper manner. It is necessary, however, for the retailer to add his name and address to the package in order to comply with the provisions of the law.

The accompanying panel shows the information required on a label to be affixed to a package of Paris green, when sold at retail.

There is nothing in the Act requiring a hardware merchant to take the names of persons purchasing Paris green.

Arsenate of Lead Can Also Be Sold

Arsenate of lead, like Paris green can also be sold in hardware stores, provided the packages are well secured, and distinctly labelled with the name of the person preparing or putting up such packages and marked poison. When sold by retail it is necessary to show the name and address of the proprietor of the establishment in which the poison is sold.

Other Poisons

Nothing in the Inland Revenue Act prevents hardware retailers from selling hellebore, tincture of iodine, carbolic-acid, not exceeding a five per cent. solution and London purple, if such articles are put up in well secured packages distinctly labelled with the name and address of the person preparing or putting up such packages and marked poison. It is also necessary when selling these poisons by retail to give the name and address of the retailer.

Name of manufacturer or person putting up poison

WOOD ALCOHOL

POISON

Name and address of firm selling poison

Law Governing Sales of Wood Alcohol

All provinces are included under the Inland Revenue Act, as far as the sale of wood alcohol is concerned. In order to comply with the law, the retailer must affix to all vessels containing wood alcohol a label bearing the words, "Wood Alcohol, Poison," in black letters, not less than ¼ inch in height.

Section 10 of the Act interests the hardware merchant particularly and reads as follows: Any vessels containing wood alcohol, whether in the possession of the manufacturer or other person, shall have affixed thereto a label bearing the words "Wood Alcohol, Poison," in black letters not less than one-fourth of an inch in height. Any person who holds in possession, sells, exchanges or delivers any wood alcohol contrary to the provisions of this section, shall incur a penalty of not less than fifty dollars and not exceeding five hundred dollars.

Name of manufacturer or person putting up the package

ARSENATE OF LEAD

POISON

Name and address of retailer selling poison

Retailers should bear in mind that the law calls for black letters on the labels. A Toronto hardware firm was fined some time ago for using red-lettered labels instead of black as called for by law.

In Prince Edward Island wood alcohol is under the ban of the Prohibition Act.

Law Governing Sale of Ammunition to Minors

Selling ammunition to minors under 16 years of age, is in contravention of the Criminal Code Amendment Act, 1913. Section 119 of the Act of 1906, was repealed and the following substituted in 1913:—"Every one is guilty of an offence and liable on summary conviction to a penalty not exceeding fifty dollars, who sells any firearm, or gives or sells any pistol, air-gun, or any ammunition therefor, to a minor under the age of 16 years, unless he establishes to the satisfaction of the justice before whom he is charged that he used reasonable diligence in endeavoring to ascertain the age of the minor before making such sale or gift, and that he had good

reason to believe that such minor was not under the age of sixteen years.''

Law Governing Fire-Arm Sales

The Offensive Weapons Act, proclaimed April 22, 1911, makes it necessary for all persons who wish to legally purchase a revolver to secure a permit from a duly authorized official. Extracts from the section affecting the hardware trade are as follows:—''Every person who exposes for sale, offers for sale, or sells any bowie-knife, dirk, dagger, stiletto, metal knuckles, skull cracker, slung shot, or who sells a revolver, pistol or air gun to any person other than one holding a certificate issued under section 118 of the Criminal Code, or one, being over 18 years of age, who produces to and leaves with the vendor a permit in writing, signed by the Superintendent of Provincial Police, or a Chief Constable of a city or town, allowing him to purchase a revolver, pistol or air gun, shall be guilty of an offence and liable on summary conviction to a penalty not exceeding $200 or less than $25, or to imprisonment for a term not exceeding six months with or without hard labor or to both, and the bowie-knife, dirk, dagger, stiletto, metal knuckles, skull cracker or slung shot, revolver, pistol or air gun so exposed or offered for sale, or sold by such person, shall be confiscated by the police magistrate or justice and transferred to the superintendent of Provincial Police, or destroyed as such magistrate or justice may see fit.

3—(1) Every person who sells a revolver, pistol or air gun under the provisions of section 1 hereof, without keeping a record of the date of the sale, name of maker, serial number of such revolver, pistol or air gun, and the name, address and occupation of the purchaser, or who sells or exposes or offers for sale any revolver or pistol which does not bear a serial number and the maker's name, shall be guilty of an offence and liable on summary conviction to a penalty not exceeding $200 or less than $25, or to imprisonment for a term not exceeding six months with or without hard labor, or to both, and the revolver, pistol or air gun so exposed or offered for sale, or sold by such person, shall be confiscated by the police magistrate or justice and transferred to the superintendent of provincial police, or destroyed as such magistrate of justice may see fit.

(2) The record referred to in subsection 1 may be inspected at any time by any peace officer and a copy thereof shall be transmitted by the person making the sale to the superintendent of provincial police within seven days after the 31st of March, 30th June, 30th September, and 31st December in each year. A violation of this subsection shall render the offender liable, on summary conviction, to a penalty not exceeding $50.

Accuracy in Stock Taking

Forms Suggested by an Accountant—A Wrong Accounting is Worse Than None at All—How to Draw up Inventory Statement of Assets and Liabilities.

Written for Hardware and Metal by Norman Lowe.

THE importance of taking a complete inventory, regularly and systematically has been demonstrated time and time again. As a protection against loss in case of fire, the inventory serves a valuable purpose as it is one of the first thing the insurance adjusters will ask for. The inventory may be made up at any time of the year, although it is preferable that it be taken during January, when business is quiet and the stock low. If there are any merchants who have not taken an inventory, right now is the time to get busy, because without one the merchant runs a chance of suffering a severe financial loss as a result of fire.

For those who have not taken an inventory, and need some suggestions regarding the proper methods to pursue the following should prove of interest.

Herewith is reproduced a sample page from a stocktaking book for a small business that has been suggested by an accountant. He advises that a duplicate be made of all stock records so that it can be placed away in the safe and always be available. The blanks ''entered by,'' ''extended by,'' and ''examined by'' are for the initials of the clerk who begins to fill out the sheet, the clerk who extends or finishes it, and the proprietor who examines it before the total is added in with the other totals. The reason for having this information is obvious. A check mark is placed in the left hand column by the proprietor as he examines each of the items recorded.

Merchants in some lines of business employ a loose leaf book indexed alphabetically. A page (or more if necessary), is devoted to the lines beginning with the letter ''A,'' there is another for those beginning with ''B,'' one for the ''C's'' etc. If a page is not large enough for all the goods beginning with a certain letter, the book being loose-leafed, any number can be added.

The chief reason for stocktaking is that an inventory may be made of the assets and liabilities and the surplus or otherwise in the business determined. The table suggested at the bottom of the page is submitted to assist the merchant in getting at that surplus. The assets include cash value of the merchandise on hand; cash value of the fixtures; the cash on hand and in the bank; accounts that can be collected for sure; notes that are good, and cash value of other assets such as horses, etc. It will be noted that real estate is not included in the list.

Liabilities include bills payable, money borrowed for use in the business, and bad depts.

Separate list of real estate assets can easily be prepared and the surplus in business and in real estate totalled.

Inventory of Stock taken in duplicate under date .....

How to Combat Mail Order Houses

Manitoba Merchant Gives His Experience—Quick Turnovers and Smaller Margin of Profits One of Secrets—Merchants Can Buy Together to Advantage—Clearing Out the Slow Sellers.

An authorized interview by a Hardware and Metal representative with E. T. Johnson, of Johnson Bros., hardware merchants, Boissevain, Man.

ONE of the big propositions for the small hardware merchant is to know how best to combat the large mail order houses and hold the trade in spite of the deluge of catalogues which they send out year after year. These catalogues, with their illustrations and complete description of the goods, have often come to be used more frequently than the family Bible. When the children want something new they look it up to see what the department store has to offer. Grown-ups read them over and conjure in their minds for days what an article will look like.

There is a certain glamor about getting these goods from the big city. When the money is despatched through the mails there is a period of delightful anticipation. The high hopes are often rudely dashed to the ground, for the article received often falls far short of what they thought it would be. Invariably the purchaser will "grin and bear it" if the article does not suit. Many times it does not suit. But they do not care to go to the trouble of remailing it, writing a letter to explain why it does not suit, taking them to the post office and waiting through another long period of anxious moments.

So they decide to keep them. If it is a hat that the housewife is buying, it may be a little large in size, but that will not matter. If it is clothing, the impulse is still stronger to make the best of it if it does not fit. If the article were secured from the local merchant, it would be sent back as many times as necessary in order to get satisfaction. The hardware merchant is continually up against the dilemma of meeting this competition. Some of the merchants are meeting it with a fair measure of success.

One of the hardware merchants who has met with considerable success in combating this competition is Edwin T. Johnson, of Johnson Bros., Boissevain, Man. Mr. Johnson was in attendance at the recent convention of the Ontario Retail Hardware and Stove Dealers' Association. He was the only representative of the hardware trade from the prairie provinces to attend the convention. He took a keen interest in the proceedings and an active part in some of the discussions. In an interview with "Hardware and Metal," Mr. Johnson gave his experience with respect to meeting the competition of the mail order houses:

Quick Turnovers Necessary

"It is one of the most serious problems which the small merchant has to face. In my estimation one of the solutions of the matter lies in smaller profits and a greater number of turnovers during the course of a year. If a man turns his goods over but once in a year he naturally wants a larger profit. If he can turn them over four times in a year, his gross profit might even be larger, yet the profit on each particular sale would be smaller. One of the secrets of the mail order houses in making attractive prices on certain articles results from their ability to make quick turnovers. We will take a particular instance. Let us suppose a hardware merchant is satisfied with a gross profit of 30 per cent. on the sale of some article that he ordinarily turns into cash but once a year. Now, providing he can turn that article over four times a year, he could be satisfied with a profit of 10 per cent. on each sale and still have a larger net profit at the end of the year. In doing so on that particular line he may be able to meet the competition of

Store front of Johnson Bros., Boissevain, Man. The left half of the window shows details of the sporting goods window which was dressed for the competition conducted some time ago by a cartridge company.

A number of glass packing boxes were placed well to the back of the window and covered over with ordinary brown building-paper which was then painted a grey stone color, and while it was still wet it was sprinkled with sand, giving it a rock-like effect. Little sprigs of evergreen were arranged here and there over the structure. A number of real stones were then placed along the base, and just in front of these a number of pieces of shock mirror, forming a small lake about 12 inches wide by 5 feet long, wider at the left-hand. The bottom of the window was then covered with green sweeping compound representing grass, and a quantity of crushed oyster shell was sprinkled around the edge of the lake, forming the beach.

At the left-hand side of the rock structure and well to the back of the window, a piece of beaver board was placed (size about 4 feet by 3 feet) and on the face of this was pasted part of clipping from a mountain scene, with pine trees in the foreground. A 2-inch hole was cut through the beaver board just even with some of the tree tops. A piece of red paper was pasted over the back of the hole and the trade-mark of the cartridge company placed in the centre of this. A light was placed behind this to act as a night attraction. The branches of the tree tops were left intact in the picture to give it the effect of the moon setting down amongst the hills and behind the trees.

To the right side of the window and just where a recess occurred in the rock formation a small tent was erected, and a sign on the side of it read: "Johnson's Camp. We Use ——— Ammunition." At night this was lighted by an electric light showing up the sign very nicely. Upon the beach near the tent lay a small birch-bark canoe, and a toy mule stood nearby with two boxes of cartridges hung over his back. Some tufts of real grass, and toy geese, completed the left-hand side of the window, and a number of boxes of cartridges, a gun, hunting-knife, belt and thermos bottle completed the right side.

the mail order house. I endeavor to make a judicious selection of those lines best suited for the trade. I believe in carrying light stocks of the shelf goods and in watching the market for the best time to buy. Experience has taught us that by careful watching of the stock you can minimize the capital in the individual lines and make more money from rapid turns of this capital than by depending on larger gross profits.

Pays to Watch Market

"In the buying of particular lines of staple goods I find it an excellent plan to watch the market and buy in fairly large quantities. By following out this method our firm has been able successfully to meet the price of the mail order houses on staple articles. There is a considerable demand for woven wire fence through the prairie provinces. We bought it in carload lots and at a favorable time, and have been able to hold this trade in our district. Mail order houses are continually using the staple lines as a bait to sell their other lines. The merchants of this country have to meet their price or lose the sale of the more profitable lines. To be a successful merchant to-day one must learn to balance his stock with profitable lines to compensate the loss on staples and closely marked goods.

"Through the medium of special sales we have been able to show our customers that we are alive in our methods. This enables us to clear our shelves of certain articles which might otherwise remain there until they become shelf-worn. It is better for a merchant to sacrifice an article sooner than late, once it shows signs of becoming a shelf ornament. If there is going to be a loss of profit he might as well accept it as soon as possible. His capital tied up in the article can thereby be turned back into other goods that will be saleable at a profit.

Uses Local Papers

"A faithful use of the advertising columns of the local paper is also made use of. We make it a habit to change our advertisement weekly. We endeavor to make it worth while for our customers to read it. Any specials which we may decide to write off we keep before the people. Inside the store these articles are placed in an attractive and prominent position. These methods we find keep us well before the people of our district. They come to have confidence that our goods are not shelf-worn. These are two very essential details to the combating of the mail order houses; namely, quick turnovers and buying at an opportune time and in quantities sufficiently large to get a good price.

"And along the line of buying in large quantities. Hardware merchants in a particular town or district would do well to get together in the purchase of their goods. There are a few lines which they can buy in larger quantities, get a better price, and make a turnover quicker than by sending in their orders separately. United we stand: divided we fall before the crushing weight of the big mail order houses. Co-operation is needed among members of the trade. Cut-throat competition is getting hardwaremen farther and farther into difficulties. They can remedy this condition to a large extent by coming together in a friendly way and talking over the matter of prices and where feasible by buying their goods together.

"Merchants throughout the country would be wise to eliminate as far as possible the duplication of stocks. In many towns in the North-West there are from three to five hardware stores doing the same business that should be done by two or three, or in most cases one. These hardwaremen are depending on large profits and slow turns, where they should be getting their gross profits from small margins and quick turns. As a consequence the consumer is suffering from high prices and the merchant from inevitable bankruptcy."

New Regulation Affects Hardwaremen

Workmen's Compensation Act as Applied This Year Will Affect Majority of Merchants in Trade—Question of Medical Fees a Discussed Point—Decrease in Assessments For 1916*—New Regulation Respecting Tinshops*

From information secured by Hardware and Metal representative in an authorized interview with officials of the Workmen's Compensation Board.

THE new regulation respecting tinsmith shops under the Workmen's Compensation Act will affect many more hardwaremen this year than it did last year. The removal of the number limit of employes will operate to bring this about. Now that the Act has been in operation for a little over a year considerable interest has been aroused as to how the Act has worked out. Both from the standpoint of the employer and the employe it has met with favor and the results of the first year's work prove the wisdom of enacting such a measure. There is one particular in which it is urged in certain quarters that the law should be amended. The Act as it stands at present, makes practically no provision for medical assistance, which the injured employe may find it necessary to have. Under the present scale of compensation the ordinary workman finds this burden bears somewhat heavily on his pocketbook. According to the provisions of the Act he is not entitled to more than 55 per cent. of his average yearly earnings—in case of injury. If he sustains a serious injury the matter of medical fees is considerable. Whether the employer should also be asked to pay the medical fees is a question which has yet to be settled. It is possible that representations may be made to the Legislature by the medical societies having in view an amendment of the Act with respect to such assistance.

New Rates Show Decrease

The new assessment rates for the employers are likely to show on the whole a decrease this year. Last year employers were assessed all the way from 30 cents to $10 on each $100 of wages paid, according to the hazard which that industry was deemed to have for the employe. The rates as assessed last year were found in many cases more than sufficient to meet all exigencies and where there is such surplus it is expected that the board will reduce the amount of the assessment for the year 1916 accordingly.

It is the purpose of the board to strike a rate each year that will be considered sufficient only to meet all the requirements of the Act. If at the end of any year it is found that a lower rate would have sufficed this advantage is given to the employers in the shape of reduced rates the following year.

Balancing of Assessments

It may happen that an employer has paid a larger assessment at the beginning of the year than he should have done. This may occur through his sending in an excessive estimate at the beginning of the year of the wages likely to be paid to all his employes. During

the year he may find it necessary to reduce his working force. At the end of the year the completed returns of the actual amount of money paid out in wages are required to be sent to the board. If he has paid too much he will be credited with a balance, which will be deducted from the amount he will be required to pay to the board for the following year. But if he has not paid enough he is required at the end of the year to make up the difference. In case a firm goes out of business during the year a refund will be made of the excess assessment based on the wages actually expended.

Where Hardwaremen Are Affected

One of the regulations in which hardwaremen will be interested is Regulation 44, which provides that where "each of the following industries when carried on as part of, in immediate connection with, and for the purpose of an exclusively retail store is excluded from the operation of Part 1, namely: "Among these various industries is included that of tinsmithing." Regulation 46 last year provided that "where less than four workmen are usually employed therein, each of the following industries, when not incidental to an industry under Schedule 1, is withdrawn from the class in Schedule 1, in which it would otherwise be included." Included in this number are tinsmith shops. This last mentioned item was repealed at the beginning of the year, and the regulation as it now stands provides that where a tinsmith shop is carried on in connection with a retail hardware store that shop does not come under the provisions of the Act if the work is only of the nature of repair work done on the premises. If, however, the tinsmith work of such employer is such as the installing of furnaces or plumbing work or the putting on of eavetroughing, in the purusuit of which the employe is required to go outside of the premises to do the work, such employes come under the provisions of the Act. The hardwareman is then considered an employer of a certain class of labor and must make his returns of wages paid and bear his share of assessment the same as any other employer. It does not matter if he employs only one man on this class of work, he must pay an assessment on the wages paid to that one man. As this will work out it will possibly mean that the majority of the hardware stores of the province will come under the workings of the Act. By the regulation for the year 1915 tinsmith shops did not come under the workings of the Act where less than four workmen were employed. This number limit of workmen employed is removed. Even one, two or three workmen so engaged to do outside work for the hardwareman are considered within the scope of Schedule 1 of the Act. The number limit is also removed from machine shops and cabinet shops.

Provision for Casual Employe

The question of the casual employe has been more or less perplexing to employers who are interested in the Act. A casual employe the Board interprets as one who is hired to do work not within the scope of the immediate business or calling of the employer. For instance, a man engaged in the manufacture and printing of books may ordinarily employ a working staff of twelve men. If a rush of work comes and he is compelled to put on an extra man for two or three days, that man is not a casual employe. If he is injured while at his work he comes under the protection of the Compensation Act, just the same as if he were a regular employe.

Take another instance. A man may be engaged in the construction of roads. He will employ a gang of men for this purpose. He may have a fire at his home which burns a hole in the roof of his house. A laborer may be employed for a few hours to make necessary repairs to the roof. But that laborer would not be entitled to the protection of the Act as he would be considered a casual employe—that is one employed in a line of work which is not the usual or customary work of the employer.

When an Employe Is Employed

An interesting point has been raised as to when an employe is actually in the employ of a company or employer. The board interprets a man as coming under the workings of the Act as soon as he gets on the premises of the employer, or when the employer supplies the means with which the workman gets to his work or to the premises of the employer. This latter case would arise in the case of logging companies or mining concerns who perhaps have short lines of railway running to their property on which the workmen ride. The moment a workman starts at work for his employer he comes within the protection of the Act.

Soldiers on Duty Not Included

Men who have enlisted and are now serving abroad or in the army in Canada and who in the meantime may be carried on their old employers' payroll at part time, do not come under the protection of the Act. If injured or if death occurs their next of kin will not benefit through the Compensation Act. They would not be considered as injured in the course of an employment under the Act. They would, therefore, be excluded from participation in the benefits distributed by the board. It follows, of course, that wages paid to such absent soldiers should not be included in the return of wages sent in to the board.

Where deliverymen are engaged in the various trades or industries for which an assessment is made by the board on behalf of the compensation fund they will also be considered as employes. If they are injured while engaged as deliverymen for that particular industry they will participate in the benefits. As an instance, a deliveryman for a tinsmith shop, which comes under the workings of the Act will be entitled to benefits, but if the deliveryman is employed exclusively by a retail or a wholesale store he does not come under the classifications which participate in the benefits.

If Employers Not Strong Financially

Employers under such classifications as railways, telephones and telegraph companies and steamship companies are placed under Schedule 2 of the Workmen's Compensation Act. Under this schedule all employers are held individually liable for the payment of compensation to their employes in the event of injury or death. A question has been raised as to the probability of some of these employers being unable to pay the compensation. It is considered, however, that there is small probability of this arising. The employers under Schedule 2 will, for the most part, be large corporations. However, should it happen that a company in Schedule II. should be financially incapable of meeting its obligations the workman would suffer if provision had not been first made compelling such company to insure.

Summary of Act

Some of the main provisions of the Workmen's Compensation Act are here briefly summarized:

1. The old defences of common employment and voluntary assumption of risk are no longer applicable. The only cases in which compensation is not payable, provided the accident arises out of and in the course of the employment, are where the disability lasts less than seven days, or where the accident is attributable solely to the serious and wilful misconduct of the workman and does not result in death or serious disablement.

2. An employer may carry himself on his wage list at a reasonable salary, not exceeding $2,000 per annum. If he makes return to the board accordingly he or his dependents will be entitled to compensation the same as in the case of an ordinary workman.

3. Workmen suffering from certain industrial diseases mentioned in Schedule III., who are thereby disabled from earning full wages, come under the protection of the Act the same as if it were an accident.

Scale of Compensation

4. (a) If accident results in death the

widow is entitled to a payment of $20 a month during life or widowhood.

(b) If a widow and children are left the widow is entitled to $20 a month and $5 a month for each child under 16 years, but not to exceed $40 in all.

(c) If only children are left the payment is $10 a month for each child under 16 years, but not to exceed $40 in all.

5. In no case is the compensation to exceed 55 per cent. of the workman's earnings, and in no case are the earnings of the workman to be reckoned at more than $2,000 a year.

6. Expenses of burial, not exceeding $75, are also to be paid.

7. When a widow marries again the periodical payment ceases, but she is entilted within a month after her marriage to a lump sum equal to two years' payments.

8. When the workman is only partially disabled he is entitled to 55 per cent. of the impairment of his earning capacity.

9. The employer must notify the board within three days of any accident happening to a workman in his employ.

10. A person letting work to be done by contract is responsible for seeing that the contractor and any sub-contractor pay their proper assessment. If he fails to do so he is himself personally liable to the board for it.

11. Employers in the different industries may form themselves into an association for accident prevention. When their rules to this end are approved by the board and the Lieutenant-Governor in Council they shall be binding upon all the employers in that class. They may appoint an inspector and his salary may be paid in whole or in part by the board.

12. It is not lawful for the employer to deduct from the wages of his workmen any part of the sum which the employer is or may be liable to pay as compensation.

13. The board may require an employer who is individually liable to pay the compensation to insure his workmen and keep them insured against accidents, in a company approved by the board for such amount as the board may direct.

14. Where a great number of accidents has happened in any industry that in the opinion of the board ought not to have happened the board may add to the amount of any assessment for which an employer is liable such a percentage thereof as the board may deem just.

15. The board may withdraw or exclude industries in which there is not more than a stated number of workmen and may afterwards add them to the class or classes from which they have been withdrawn.

16. Every employer must yearly prepare and transmit to the board a statement of the amount of wages earned by all his employes during the year then last past, or any part thereof specified by the board and of the amount which he estimates he will expend for wages during the then current year or any part thereof specified by the board.

17. If the employer does not comply with the foregoing provision he is liable to and may incur a penalty not exceeding $500.

18. If for any reason an employer liable to assessment is not assessed in any year he shall nevertheless be liable to pay to the board the amount for which he should have been assessed, and payment of that amount may be enforced in the same manner as the payment of an assessment may be enforced.

19. All wholesale and retail mercantile businesses are excluded from the operation of Part I.

Avoid the Co-Insurance Clause

Need for Expert Advice—Co-insurance Clause Plays into Hands of Companies—Merchant Should Notify Company in Writing in Case of Fire—Desirability of Eliminating Unnecessary Permit Clauses

Written for Hardware and Metal by J. O. Garfield.

MERCHANTS are just beginning to realize the necessity of taking a live interest in the matter of fire insurance. In the past they have for the most part been somewhat indifferent about the subject. They treated the insurance companies with too great a trust—put too much faith in their good intentions. When a fire came they realized that the company was out to do for itself the very best it could. If a few dollars could be whacked off here and there from the amount they would be called upon to pay they were on the job to do the whacking. It was a business proposition with them. They will pay out as little cash as possible. They are not handing over the keys of their treasury to the man who may be unfortunate enough to have a fire. The attitude the company sometimes assumes when a fire occurs is: "Another fire, eh? Well, here is where the wolves will want to replenish their larder from our storehouse. Guess we better lock up the safe." And they proceed to lock up the safe. In some cases a crowbar or a charge of nitro-glycerine would scarce avail to open it. When the merchant comes to examine his policy he perhaps finds an interpretation placed on it that he had not expected. He had been too indifferent about the whole matter. He formerly looked on the insurance company as a sort of big-brother philanthropist, and treated them with a child-like trust and simplicity. "I have my policy. I can hold them to the terms of that," he assured himself and let the matter rest there.

That is the trouble: he takes too much for granted, and when the policy comes to be interpreted he often finds it is other than he supposed it was. Against the merchant is pitted some of the keenest brains in the insurance business. It is their business to see that their interests are looked after . That is what they are paid for. They are paid to make the business of insurance pay for their companies. It would not be good business policy on their part to turn over the keys of their treasury to all who may happen to have a policy with them. When a fire comes they immediately become of the Missouri type: "Show us why we should pay—and, of course, we will pay. But until you do—nay, nay."

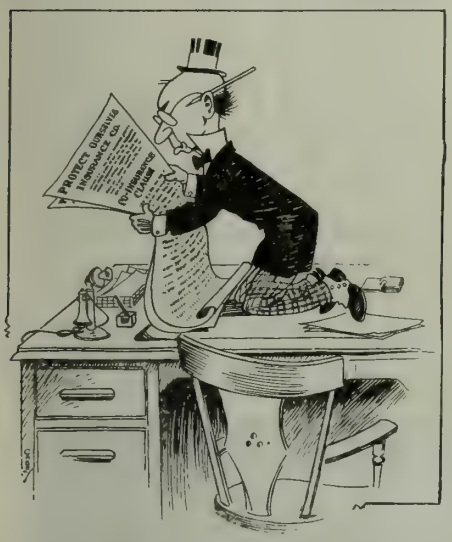
It is good business policy then for the merchant to have some one examine his policies who knows as much about insurance as the men who sold it to him. Services of such men can be secured. They are known as adjusters, and act independently of the insurance companies. They are men who have made a study of the insurance game. One of the delegates at a recent hardware convention expressed the matter succinctly when he said: "I think our policies should be placed in the hands of some one who knows more about the insurance business than we do. Our business is the conduct of a hardware business. We do not profess to have anything but a meagre knowledge of the insurance game. It is good business policy on our part to see that our interests are safeguarded. We can often save hundreds of dollars by getting this advice at the right time. It should not be left until after the fire. The time to get it is be-

fore the fire." But retailers should be careful that the adjusters are competent.

Should Notify Company of Loss

An expert on the insurance business states that one of the first things a merchant should do is to notify the company of loss. This, of course, should be the first precaution after the very necessary step of seeing that the policy is all right and that the company is a reliable one.

Some merchants have found to their financial loss that notification to the agent of the company is not sufficient.



The services of an expert, who will minutely and painstakingly examine the policy, should be secured.

The law requires that notification must be sent to the company in writing. Notice from the agent in your own town is not considered notice from the one insured. There are a few very essential points that the merchant should observe in order that his case may get a hearing at all. This is one of them. If a company is not notified that there has been a fire, can it be presumed that they know? This is a matter that it does not take an expert insurance adjuster to attend to. It can safely be left in the hands of the merchant. But it is very necessary that he know the requirements of the law with respect to the matter.

Save Everything Possible

It has been the custom of many merchants in the event of fire to walk out of their stores and leave the goods. They were of the opinion that their policy protected all their goods, whether damaged or not. An expert on insurance recently pointed out that the policy covers only the actual loss on goods. He is of the opinion that a merchant should take every possible precaution to protect his goods. It is advisable that he assist in every way to get the goods out of the burning building. It is wrong to presume that the insurance companies want the goods. They do not. The merchant, if he is wise, would save as much as possible. Any goods that are damaged or stolen after they have been removed would then be chargeable to the insurance company.

Danger in Co-Insurance Clause

A particular which very often results in disaster for a merchant is the insertion of the 80 per cent. co-insurance clause. Too much care cannot be taken by a retailer with respect to this clause. Some experts advise having it cut out altogether. They point out that it is one of the biggest assets which the insurance company has.

The co-insurance clause is a contract by which the insured agrees to keep insured to the extent of at least 80 per cent. of the value of the property. If he fails to do so, he himself must stand for any loss which would have been paid through the insurance he should have carried in excess of the amount he actually did carry.

As an instance. A merchant has a thousand dollars' worth of stock and insures it subject to this 80 per cent. clause. Later in the year his stock increases to $1,500, but the merchant neglects—perhaps only for a day or two—to increase his insurance. Then the fire comes. The loss and damage amount to $600. The merchant, under the co-insurance clause, should have had insurance to the extent of 80 per cent. of $1,500, or $1,200. Instead of that he has only 80 per cent. of his original $1,000, which is $800. The insurance company, therefore, according to the terms of the clause, is only compelled to pay eight-twelfths of the loss of $600, equalling $400. The merchant must himself stand the other four-twelfths of the loss, $200. That is, the company will pay only the same proportion of the loss that the insurance carried bears to the value of the property.

Of course, one of the inducements held out by the insurance companies for a policy with a co-insurance clause is a lower rate. The chances for them to be the winners through the clause are by far the greater. It is usually in that odd day or two before the merchant places the additional insurance that the fire occurs. Straight insurance may be a little higher in cost, but there is greater security in it. The co-insurance clause is possibly all right if a fire never occurs. But then who can tell when the fire is likely to occur?

Policy in Broad Terms

Merchants should see to it that their policy does not name articles too specifically. It should be broad and general in its enumeration of the stock insured. A clause, such as "goods, wares and merchandise, and such articles, as are commonly carried in a general hardware business," is the best specification. There is always a chance that the insured can be tripped up when there is an attempt made to cover all the articles minutely.

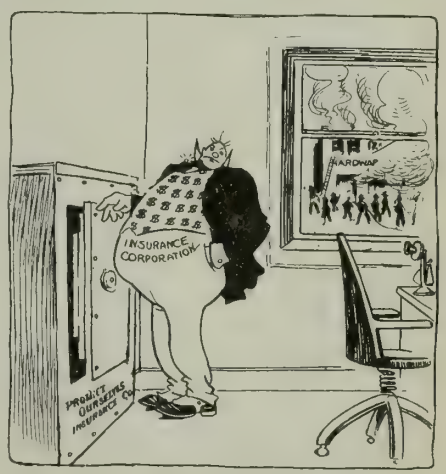
Minimize Number of Permits

It is a good plan to keep the number of permits named in the insurance policy down to the minimum. Only where there is a contravention of the insurance law in the keeping of certain goods is there necessity for securing permits from the company. The merchant should take the trouble to find out just what he is allowed to keep on his premises without a permit. As an instance, the insurance law provides that he shall not carry more than five gallons of coal oil without a permit. It is also necessary to have a permit to carry more than five gallons of lubricating oil. The merchant is advised by experts not to have a large number of permits inserted in his policy. Only those that conflict with statutory provisions should be provided for. Some of the things for which he should make provision are:

(1) If a dealer keeps coal oil or lubricating oil in quantities exceeding five gallons.

(2) Any quantity of gasoline and benzine kept on the premises must be set forth.

(3) If any of the store furnishings, such as cash register and other articles of a similar nature are held under a lien or agreement of sale the policy should read: "In the event of the property hereinbefore mentioned being held under



The average hardwareman takes it for granted the company will say: "Another fire, eh? Well, here is where the wolves will want to replenish their larder from our storehouse. Guess we better lock up the safe."

royalty, lien, or sale agreement, this insurance shall be held to cover the vendor and vendee."

(4) The question of the dealer's title to the property or stock should be looked after. A clause should be included which will read, with respect to the property, "owned or held in trust," or "on consignment."

Making, Beveling and Silvering Glass

Glass Passes Through Many Processes After it Comes From Factory—Description of Processes, Together With Manufacturing Methods—Continuing the Series of Articles on "How Hardware Goods Are Made"

From information secured by a Hardware and Metal representative in an interview with E. A. Hill, of the Toronto Plate Glass Importing Co.

GLASS is one of the important commodities with which a hardware merchant has to deal. The handling of glass enters largely into his daily work. It presents problems which are often perplexing to the merchant. Broken glass is one of the bugbears which makes many a hardware merchant lose much good sleep. This constant breaking of glass is held by some to be one of the chief "leaks" in the hardware business. Not alone does the merchant break his fair share but his clerks take a hand at the breaking process. It is not of their own volition that they engage in this smashing of glass. Apparently in spite of their best efforts the glass will break. It is a constant care at all times by the hardwareman to see that his breakage is kept down to the minimum.

Figuring as it does so largely in his daily cares, glass is naturally a topic of more than passing interest. As yet there is only one glass manufacturing plant in Canada, namely, that of Pilkington Brothers at Thorold, Ont. In this plant only the sheet glass is manufactured. The making of plate glass has not yet been undertaken. In the past there has been a dearth in Canada of the proper kind of sand or silica for the making of glass. There may be plenty of this material in Canada, but exploration as yet has not brought it to light.

Glass Imported From U.S.

There are a number of firms who import the glass and do the finishing work such as cutting, beveling, silvering and bending, together with the putting together of art glass designs for windows of various kinds. One of these firms is the Toronto Plate Glass Importing Company. A trip through their factory on the Don Roadway brought out many interesting details.

Prior to the outbreak of hostilities most of the glass was imported into Canada from England, Belgium, France and Holland. Since this source of supply has been shut off the imports have come largely from the United States, principally from Kane and Pittsburg in Pennsylvania and Rossford, Ohio. Glass is manufactured from silica, which is a peculiar grade of sand adapted to the manufacture of glass. The other principal ingredients are potash, lead and charcoal, the latter substance being used to purify and crystallize the glass.

How Plate Glass Is Made

In the manufacture of plate glass these constituent elements are placed in large metal pots to be melted and dissolved into a liquid state. It is allowed to remain under the fierce heat from a coke furnace for a period of eighteen hours. Each one of these pots contains sufficient of the liquid glass to make one of the largest size plates. When sufficiently cooked the glass is poured on a large steel table along the sides of which is a steel bar which gauges the thickness of the glass. At one end of this table is a huge metal roller. The glass is in a taffy or dough-like state when poured on the table.

Plate Glass Is Rolled Out

The great roller is pushed along over the glass and flattens it into the mold. When in this rough state the plate is about a half-inch in thickness. It is afterwards ground and polished to a quarter-inch thickness. From the mold the sheet of glass is shoved off into what is known as a "leer," which resembles a large chimney lying flat instead of being upright. In this leer the plate is allowed to cool gradually by being shifted along from the hottest end, where it is heated by a gas flame, to the cooler end which has no heat.

From the leer the plate goes to the cutting table where the edges are trimmed to the proper size. It is then shifted to the upending table. All of the large plates of glass must be turned on edge when they are to be carried. If an attempt is made to carry them flatwise the weight of the glass will break the plate. A special table is made the top of which can be turned up edgewise, while the plate is lying thereon. It is then carried to the grinding table.

Grinding Glass to Proper Thickness

This table is of enormous size, sufficiently large to carry a number of the largest sized plates. They are embedded in plaster of Paris. Two great grinding rollers made of steel are placed to grind from the upper side. On the lower side of the plate there is one large steel roller which is in the form of a revolving table. The two steel rollers on the top revolve in opposite directions from the bottom table. Sand and water is kept running on the surface of the glass and with the action of the grinding wheels carry out the first step in the process of reducing to the proper thickness. The plates are then shifted to another set of grinders where the operation is repeated with emery dust and water as a grinding material. The third operation in the grinding is done with pumice stone and water and the final operation is with rouge on felt polishing wheels. Rouge is red oxide of iron. This completes the polishing process and the

Plate glasses for mirrors being ground in the beveling process.

plate is then at its proper thickness of a quarter inch.

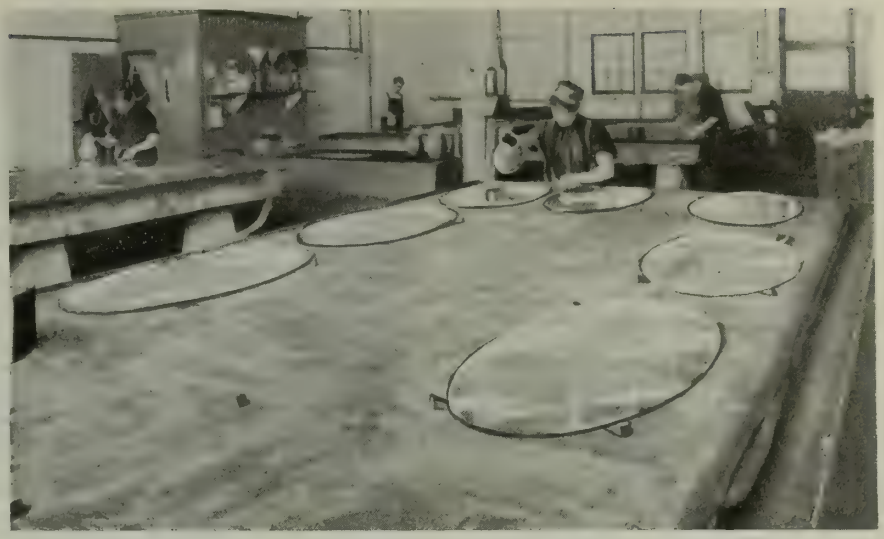
Sheet Glass is Blown

The process of manufacturing sheet glass is an entirely different one from the manufacture of plate glass. The same materials are used and are prepared in the same way as the plate glass materials. When in the molten state an iron ring is dropped in and this cools a sufficient amount immediately surrounding the ring to give a firm pulling centre. Hooks on the side of the ring are attached to machinery which commence pulling the glass upward. The form of glass looks identically like a great bottle. It is perhaps 15 to 20 feet in length and about three feet in diameter. Through the opening at the neck of the bottle compressed air is forced in, which gives the bottlelike form to the glass. The thickness of the glass is regulated according to the time it takes to draw the bottle-like structure upwards.

Cut Glass by Electric Wire

The bottom of this big bottle is then clipped off from the main mass of glass by the use of a pair of shears, and the soft ends are drawn together. This great cylinder of glass is then placed on a frame in a horizontal position after if has cooled. At intervals of five feet an ordinary copper wire is run around this glass cylinder and drawn tight. These are charged with an electric current until they become red hot. By the touching of the wire in one spot with a cold screwdriver which the workman moistens the wire cools quickly and the contraction of the wire causes a clean cut all the way around the glass cylinder.

These sections of glass are five feet long and in a cylindrical form. A hot iron is then drawn across this cylinder and the glass is cut in one place. It springs into a shape like a starched collar. In this form it is placed in a kiln and heated to the point where it will flatten out. It never lies perfectly flat but has a slightly concaved surface. All sheet glass will have this slightly concaved surface. When it cools it is cut to stock sizes and packed for shipment.



Silver plating oval mirrors. Nitrate of silver is being poured over the sensitized surface of the plate glass.

Applying the preservative after mirrors have been silver plated.

Examining and cutting large plates of glass. A straight-edge is used to guide the cutting-wheel. The straight-edge is then placed under the glass at the cut. Pressure is put on the end of the plate and the cut is made clear and sharp.

Making of Mirrors From Plate Glass

In the making of mirrors the plate glass is cut to the proper sizes and shapes with the assistance of patterns. The ordinary steel wheel cutters are used.

When the plate is cut to the various shapes for mirrors such as ovals, squares, oblongs and other shapes they are passed along to the beveling room. Here the first process is to smooth one edge with the roughing tool and slightly chip the side that is to be beveled with the same instrument. This helps the beveler to get his work started. The first process in grinding is on a steel wheel which is kept moist by a mixture of sand and water. From there it goes to another steel wheel and is ground still further with emery dust and water. The third process in the grinding is on an ordinary sandstone, which is called the smoothing mill. The polishing process is done on a wheel made of boxwood over which pumice and water is kept running. The finishing process in the polishing is done on a buffer made of felt on which rouge is used. The entire surface of the mirror glass is then polished with rouge and felt blocks on a spinning wheel.

Ready for Silvering Process

From the spinning wheel the mirror plate goes to the silvering room, afer it has been thoroughly examined for flaws of any kind. It is washed with distilled water and sensitized with a solution of tin which makes the silver adhere to the glass more readily. When thus prepared it is placed on a large table covered with blankets and which is heated to a certain extent by the use of steam. Nitrate of silver is poured over the face of the glass from a pitcher. Being in the liquid form the silver finds its way to every part of the surface. With the effect of the heat the silvering first takes on a dark steel color, then changes to a tar-

nished silver color, then becomes yellow almost like gold and by the time the process is complete and the surplus liquid is poured off the glass is of the bright silver shade. The mirror is allowed to remain on the silvering table for about fifteen minutes. The coating of silver is very thin and can easily be scraped off with the finger-nail.

Shellac Protects Silver

After the silvering process is complete the mirrors pass to the adjoining room where the back is first given a thin coating of shellac and allowed to dry. This is done for the purpose of protecting the silver. As a dobule protection an outside coat of pure red lead is painted on. They are allowed to remain a day in the drying room, then are cleaned with a damp cloth, rolled in paper and packed in boxes twenty to each.

Art Glass Work

A very important part of the activities of a large glass concern is the art glass department. Here a large stock of the various shades of glass is kept. The colored glasses are mostly all made with the use of chemicals. In the ruby glass the color is obtained by mixing in some pure gold. Cobalt blue is obtained by adding the cobalt metal. An artist designs all the various patterns. He makes a drawing and indicates the number and shade of the glass he desires. Another man cuts the glass and arranges the pieces according to the specifications on the drawing. These pieces are then laid together on a work table with the aid of the lead frames. When the design is completely laid out the lead sections are soldered together and a cement run around the glass in the frame to keep it securely in place. Copper frames

Arranging and cementing art glass designs.

are used on some of the better classes of art frames.

Many Different Kinds of Glass

In addition to the art glass, plate glass and ordinary sheet glass there are numerous other kinds of glass, such as the wired plate glass, which is used largely in skylights, elevator fronts, factory window. Ordinary chicken wire netting is molded into the centre of the glass and prevents the glass from falling out should it become cracked. Then there is the prism glass for the purpose of reflecting light into the interior of buildings from alleyways and light wells and other places where it is difficult to get a direct light ray. Also there are the figured rolled glasses made in many patterns and used as decorative glasses.

Bending of Glass

One of the most interesting processes in the manufacture of glass is the bending of sheets to the various shapes required in the trade. There are the bent plates used in china cabinets, book cases and cabinets of various kinds. There are the convex ovals used for picture frames, and there are the large bent plate glass fronts for stores.

The glass is bent with the aid of the hot flame from a coke furnace. Molds of the desired shape are placed on trucks in the section of the furnace where the hot flames can lick up its rigidity and cause it to be limp "just like a banana peel," as the hardy son of Italy might say. The man who operates one of these bending furnaces places the flat sheet of glass into the furnace on the end of a long ladle. He allows it to become slightly warm before placing in the mold. In about three minutes' time the glass will begin to sag and conform to the shape of the mold. With the assistance of a long wooden brush he helps the pliable glass to conform tightly to the mold. The little truck carrying the mold is shunted to the back of the kiln and from there the operator lifts the glass to the leer where it gradually cools. The glass is all handled by the workman with his series of long tongs and paddles. The deftness with which he operates these reminds one of the careful hands of a woman when handling her expensive chinaware.

Sizes and Weights of Plate Glass

The sizes of plate glass range all the way from 200 inches in length by 123 inches in width to plates 12 inches by 12 inches. The largest plates would therefore be approximately 16½ feet by 10½ feet. Quarter-inch plate glass weighs four pounds to the square foot.

Racks for storing large sizes of plate glass. Some of the plates are 200 x 123 *inches.*

Digby, Nova Scotia

Hardware and Metal,

Toronto, Ont.

Your letter and information of Feb. 23 to hand, and we wish to express our thanks for the same, as you have taken a great deal of trouble in looking up the matter for us. We have taken Hardware and Metal for some years and consider that we could not get along without it and its services.

Yours very truly,

DAKIN BROS.

How to Cut Glass Properly

Hardware Merchants Can be Relieved of Jinx by Observing Proper Precautions—Glass Should be Cut Along Hollow or Concave Side — Taking Care of Cutter

Based on an interview by Hardware and Metal representative with the manager of a large glass supply house.

AT the recent convention of the Ontario Retail Hardware and Stove Dealers' Association, a question was asked as to what was considered the biggest "leak" in the hardware business. One member had experienced a serious "leak" from oil barrels in his storage room. Another member thought one of the biggest "leaks" resulted from the breakage of glass which is constantly going on around a hardware store through the work of inexperienced juniors. "Clerks will hide the glass when they break it," said one of the members at the convention.

Lifting a large plate from the upturned table. All large plates are carried on edge. The weight of the glass would break itself if carried flatwise.

But it is not through the clerks alone that there is a big loss in the breakage of glass. Hardware merchants themselves very often do not understand the right way to cut glass. In consequence their loss during the course of a year from this source is considerable. They have never had an opportunity to learn the right way. The process is a simple one. Once it is mastered the thinnest sliver of glass can be split from a sheet without danger of "running out."

"We once lost a customer because he thought the fault was in our glass," said a representative of one of the large Toronto importing houses. "He went to another firm for his glass, but found he had the same difficulty. As a matter of fact most of the glass importing houses get their supply from the same manufacturers. If a man cannot cut the glass of one importing house it is safe to say he will find it just as difficult to get along with the glass of other dealers. We finally got him back as a customer, but it was only after we had given him the instruction that set him right in the way of cutting glass."

Sheet glass should always be cut on the hollow or concave side. One can easily tell the concave side by holding the glass up and glancing down the edge.

In the manufacture of sheet glass it is first made into a cylindrical form that resembles a huge bottle. This great bottle, which is from fifteen to twenty feet in length and about three feet in diameter, is cut into sections five feet long. These sections are split open at one point by drawing a hot iron across. They are then laid on a mold and flattened by means of heat from a coke furnace. It is never possible to make them exactly flat. The sheets are slightly concave.

There is greater resistance on the convex side than on the concave side. This accounts for the cut "running out" and invariably a spoiled sheet, if the cut is made along the convex side. The representative of the importing firm demonstrated the ease with which glass can be cut when the right method is followed. Strips from an inch to one-eighth of an inch were stripped off when the cut was made along the hollow or concave side. When it was attempted along the convex side of the glass they invariably failed. It was somewhat marvellous to see the long slender strip of glass of one-eighth of an inch in thickness and three feet long come peeling off. One would almost imagine that a strip was being ripped from a slippery elm tree.

But it is very essential that the cutting tool should be in good shape also. If a cutting wheel is used care should be taken to see that it does not get dull or that the bearing in which it runs does not become worn. If the cutter becomes dull it will skip in places. These little skips are the danger places that cause the cut to run out.

If a good wheel cutter is kept in good repair it will cut as many as 2,000 lights without showing signs of wear. With constant use they have been known to do good work for two to three months. It is very necessary that the little wheel be kept oiled. If the cutter is kept covered in coal oil when not in use it will always be in proper shape when needed. There will never be danger from the wearing of the bearings of the wheel. When it begins to show signs of dullness it should be relegated to the scrap heap or the wheel should be sharpened.

Two points are to be remembered and with these in mind one serious leak in the hardware business should be greatly minimized:

First, cut the glass on the hollow or concave side.

Second, always keep the cutting tool in good shape.

It is well to practise on a few strips until one becomes thoroughly conversant with the proper side on which to cut the glass.

When the importer demonstrated the way glass acted if cut on the convex side, it was an easy matter to see why so much glass is broken by hardwaremen. Invariably the cut would break out to the edge. When an attempt was made to straighten out the cut by starting at the opposite side the cut would in many instances run in and spoil the entire sheet.

Color Card a Valuable Article

Proper Use Should Mean Increased Business for the Paint Retailer—Are Prepared at Great Expense by Manufacturers and Contain Most Valuable Information from Experts—How Cards are Made.

Written for Hardware and Metal by A. E. Johnson.

"WHAT is the reason that some dealers in paints do not appreciate the value of the color card?" was asked the manager of a well-known firm of paint manufacturers. "Simply because they get them for nothing. If we charged the dealer for the cards they would be more careful of them and make better use of them. It is the same with all the advertising matter of the paint manufacturers.

"Some of the color cards cost the manufacturers on an average about four cents apiece. Yet they are treated as so much junk by some of the dealers. There seems to be a great lack of appreciation on the part of the retailer.

Gave Them to Children

"There was one dealer in particular who seemed to be using a large number of these color cards," said the manager of another paint company. "We were curious to know to what use he was putting them. We made it our business to send a man around to make inquiries. 'Oh, we give them to the school children to play with. They like the colors to cut up.' And so we have found to be the case with many retailers.

"There was one dealer, for instance, who supplied the local baseball team with some caps which were intended to be distributed among the painters and men of the town who were likely to become users of the paint. These caps cost in the neighborhood of five cents each, and were of very good quality. 'Send us some more caps,' came the rush order. 'They're going like hot cakes.' We were naturally curious to know what he was doing with them. He informed us that the high school baseball team had considered them the proper caper and had grown very enthusiastic over them. So the caps were placed to some use, but in a way that could not possibly bring any increased businesses to the retailer or the manufacturer."

Information in Folders

Perhaps these color cards and other advertising matter have been going to the retailer for such a long time that he has grown unappreciative of their merits. With long coming his senses have become dulled to their merits. The color card is prepared under the guidance of expert paint manufacturers. It contains knowledge that it has taken the manufacturer years to acquire. True there is some "boost material" for the manufacturer's particular brand of paint. But when this has been cleared away there will usually be found a residuum of useful and highly expert knowledge.

Of course there are color cards and color cards. Some of them contain more information than others. For instance, one card distributed by a well-known firm deals with the reason for the use of the basic material—lead, zinc and oil. These are good talking points for the retailer and help him to have a better understanding of the subject of paints. There is one piece of information, however, that they all contain, namely, directions for the proper application of the paint. To the dealer in paints this is one of the big essentials. If they are not properly applied they will not give satisfaction; result, no more sales.

Salesmen Should Be Conversant

It is well that the dealer and his clerks should be conversant with the right method to use paints. If he can first give oral instruction to the purchaser with the request that he later read the instructions contained in the color card there is better chance that the paint will be put on properly. With two applications of this instruction more of it will undoubtedly stick than if only one were applied.

How Cards Are Made

The manufacture of these color cards is no inconsiderable undertaking on the part of the paint makers. They are made in the painting room, in which several painters are kept busy throughout the year on this one class of work. The actual paint is spread on paper, showing all the varieties of paint—house paints, buggy paints, wagon paints, enamel paints, floor paints. Thousands of these sheets are produced each month. These painted sheets are then cut into small pieces or "chips" by large motor-driven power cutters and are carefully stored away in small metal trays for future use. Tons of paint are used each year in the production of these color chips. The number of chips produced runs up over the billion mark.

The color card manufacturing department is equipped with special machinery for the placing of the small chips on the printed blanks. Not very many years ago these chips were all attached to the cards by the hand method. On account of the great number of color cards required each year by large manufacturers the hand process had to give way before a speedier one. To-day the work is done most efficiently by an ingenious machine which is under the control of one operator. It first applies the gum to the card then the card is shifted to another section of the machine where it is brought in contact with the small color chips where the gummed surface causes the chips to adhere. In the old hand-pasting days an expert operator could finish two hundred cards in a day while one of the machines will finish the same number in an hour.

But all this labor and scientific knowledge is "cast as rubbish to the void," if the retailer fails to make proper use of the cards. He should realize that they can be made one of the best aids to increasing his paint trade that he has within his grasp. Some merchants have them neatly framed and placed on the counter where prospective customers can easily see them. Paint manufacturers in some cases send the color cards to the retailer in this form. In this form they have the advantage of always being ready at hand and in a place where they can be readily seen.

Three Important Essentials

These three very important essentials should be borne in mind by the retailer: First, become acquainted with the contents of the color cards and see that the clerks do also, for they can be used as good talking points. Second, do not give them out indiscriminately. The only thing cheap about them is the price which the retailer pays for them. He pays nothing for them, but should realize that they are of great value. Third, he should give them only to prospective customers. People who are not interested in painting will not expend very much trouble in looking over the card. Other advertising matter should be distributed with the idea in view of securing business from it.

Painters' caps distributed to high school boys will never get the merchant any business from the man who is in the painting business. It is misplaced advertising matter, and is not good either for the paint dealer or manufacturer.

Preparation of the Painting Surface

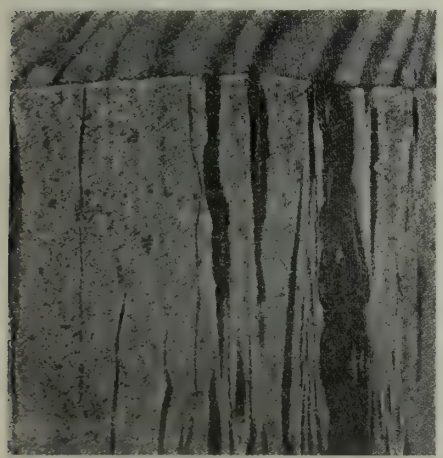
Dealer Should Find Out the Nature of the Surface to be Painted—New Houses Should be Shellaced—Porous, Spongy Woods Need More Primer —Moisture the Enemy of Paint

Written for Hardware and Metal by H. J. Penberthy, Manager of Lowe Brothers, Limited, Toronto.

WITH a great many paint users paint is paint and that is all there is to it. They never stop to consider that different paints are made for different purposes or that, unlike a great many patent medicines, the same thing is not good for all ills.

Speaking from the standpoint of outside painting, there are a number of factors affecting results in painting with oil paints. Among them are:

1. Location and design of the structure.
2. Kind and condition of the surface.
3. Quality of the paint and its temperature.
4. Workmanship of the painter.
5. Number of coats applied and their sequence.
6. Time allowed to elapse between coats.



The above illustration shows failure on pine, and demonstrates the fact that cracks in the paint film are only over the pitchy places.

7. Atmospheric conditions when the painting is done.

With so many conditions with which to contend the manufacturer must have the co-operation of the dealer in order that the results expected by the consumer may be obtained.

Should Question Customer

If the dealer would question the prospective paint user occasionally he would find a number of conditions which should be taken into consideration in selling his customer a bill of paint, and by learning more about the paint business himself he would be in a better position to advise his customers and have less cause to write to his manufacturer and say, "This can of paint was no good so I gave my customer another."

In dealing with the first question, "Location and design of the structure," it is of some importance that a house standing alone in the country must necessarily have different treatment than a house in the city protected on both sides by other houses and where the severe exposure is either front or back. It is not reasonable to suppose if two coats are sufficient to give the city house a fine and lasting job, that the same number of coats will be sufficient for the house standing alone in the country, where the elements attack on four sides all the year around. It is not reasonable to suppose that the surface of the country house will be in the same condition as that of the city house, which is protected, and therefore considerable thought should be given to the surface and the preparation of it for painting.

New House Should Be Shellaced

On a new house all the coats should be shellaced. There is a difference of opinion as to when shellacing should be done. In olden times all shellacing was done before the primer was put on. While the daubing of a knot on the side of a house seems to be a simple operation, it has been considered too simple in the past and disastrous results have been obtained on many otherwise good paint jobs on account of not giving more consideration to the shellacing of knots and pitchy places. It is not wise to follow the custom of daubing a knot and then painting right over it. Give the shellac time to dry and the results, as shown in the picture, will not accrue from careless workmanship. Shellac should be applied smoothly and not daubed on.

Of all surfaces that paint is designed for, lumber offers the greatest number of unknown quantities, owing to its variety in kind and condition. The main constituent of wood is ligno-cellulose; it also contains water, extractives and mineral matter. The extractives and the water are both repellent of paint. The problem involves more than two unknown quantities and it can be solved only by an orientation of all the factors involved and then undertaking to control them.

Much yellow pine is used in some districts for building purposes and it has been found that the best way to get it in a receptive condition for painting is to let it weather for several months in order to harden the sap and eliminate the excess of water—then clean and paint.

Wood Has a Thirst

There are many different kinds of wood — some of them trouble makers when it comes to painting—and it is well for the dealer to inquire what kind of wood is used for sliding on a new house, and if anything out of the ordinary he should write to his manufacturer and get

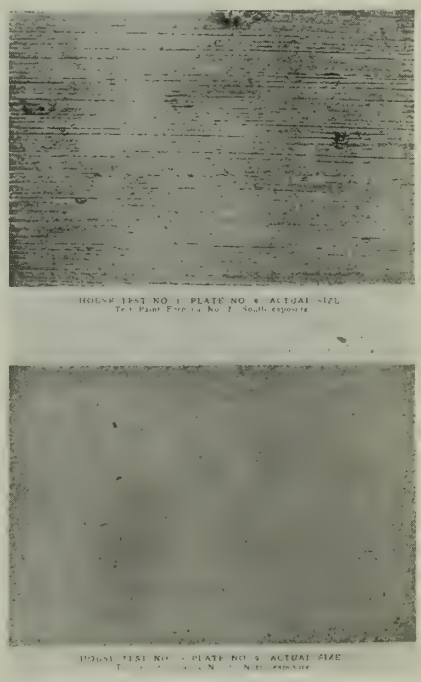


Illustration showing the effects of northern exposure as opposed to southern exposure upon the durability of paint.

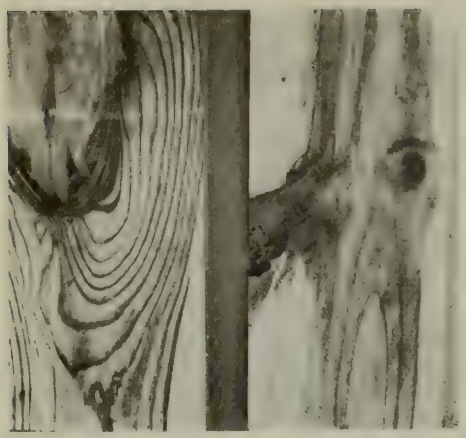
advice regarding the best method of finishing that particular wood.

Of late years spruce has come into prominence for siding, and lumber people, without any regard for finishing, recommended very highly its use. The result was that thousands of houses, finished with this lumber when it was first introduced, failed and the paint was blamed, whereas it was not the fault of the paint at all but it was the fault of the surface.

The problem was placed before the paint manufacturers and they have very easily remedied the defect by making a different recommendation for the application of their products on this particu-



Care should be taken to see that knots are properly prepared. A good coat of shellac is very essential over knots and pitchy surfaces.

lar surface. The more porous and spongy the wood, the more paint and primer it requires. There are soft spongy places in all lumber, and when many of these appear they should have an extra dose of primer in order to satisfy their thirst. The soft spots in all woods are thirsty and you must satisfy this thirst before good results in finishing can be obtained.

Effects of Different Exposures

In view of the fact that paint fails on the sunny sides and on the top sides of a structure much more rapidly than it does upon those that are shaded, and that it fails more rapidly on the top sides exposed to rainfall and sunshine than it does on the sheltered portions, it seems as though the sore and naked places require one coat more than the healthy parts, and the consumer will save money by years of service if this fact is considered when painting.

Good painting is more than the laying on of paint. An experienced painter tells us that the less paint that is put on at each operation consistintly with the proper covering of the ground, the better will be the ultimate result. We incline to the opinion that less paint and more painting is a crying need of the present time.

Moisture the Enemy of Paint

The greatest enemy to paint is moisture, and great care should be taken that there is no moisture present in or on the surface when paint is applied. When water is present underneath paint exposed to the direct action of the sun's rays, vapors are generated which frequently in their effort to get out either rupture the paint or loosen it from the surface so as to destroy its efficiency.

Very often painters will stop work until a shower blows over and then proceed to paint over the wet surface. The strong sun will come out and attack this surface, and blistering will take place.

An investigation was made of a complaint where there was some blistering. The investigator went over the house thoroughly and asked the usual questions and received the usual answers. "The weather was perfect. It had not rained for several weeks before the house was painted and it did not rain for several months after the house was painted. The surface was in perfect condition. The best painter in town did the work, and your paint is absolutely no good." The investigator removed some of the paint from the house and it was sent to the laboratory. Examination proved conclusively that there was a very hard beating rain storm during the time the house was being painted. This beating rain came down on fresh paint and the drops are plainly printed and photographed on the hard paint film. It was another case where somebody wanted something for nothing and the paint manufacturer must be the goat.—The old, old story.

(To be continued in next issue.)

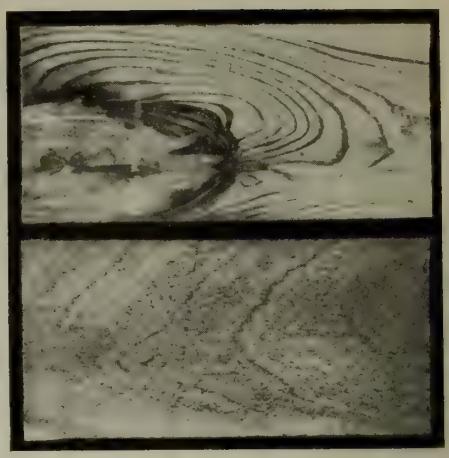


Illustration shows a receptive and non-receptive surface in lumber. Sound, seasoned lumber is a receptive surface. Any good oil paint will stick to a surface of this kind. Non-receptive surfaces include defective lumber, knots and pitchy surfaces.

The Paint Sinner Sinned Against

Getting a Line on a Live Paint Story From the Manufacturers' Standpoint—A Heart to Heart Talk with a Retailer—A False Line of Argument in the First Place Tested—Other Stores Selling at Old Prices and No Reasons Stated

Written for Hardware and Metal by G. E. Pearson.

THE editor asked for a good live story on paint selling for the special number of Hardware and Metal so I got busy collecting facts.

I made a personal call on four different paint manufacturers and asked each one what he considered was the most important feature of the paint trade from the retail standpoint to-day. In each case the reply if one allows for individual variations of thought.

"Get after this retail practice of selling paints to-day on a basis of cost of months' ago instead of taking advantage of the market and making a profit. We want to see the retailer make money. His prosperity is ours, and this is the greatest little opportunity he will ever have to make some easy money in a perfectly legitimate way: "Get after that and play it up and you'll have a live article."

And so this is our brain child, conceived in smelly paint offices and born on city streets in the intervals of an endless pilgrimage amonst the paint stores of Montreal.

The First Interview.

The first store that I went into was one on one of the lesser business streets, in a good district and of a character to lead me to expect a good average representation of the case in hand. I asked for the proprietor and introduced myself at the same time stating the object of my visit and asking his co-operation.

He seemd both interested and amused. "You're quite right. It's a crying evil but I don't see how finding out about it's going to help the case any."

"Why not?" I asked.

"Because we all know it to exist just as well as your manufacturer friends do but since each one of us is pulling for his own individual profit there is bound to be this near-price cutting on the part of some one that starts all of us doing it."

The Bet

"Do you?" I asked pointedly.

He grinned sheeplishly. "Yep."

I studied him. "And you maintain every one else is doing it?"

"Sure I do."

"You're wrong and I'll prove it."

"You prove it. Prove there's a dealer in Montreal selling paint on the market to-day irrespective of what his stock cost him and I'll do the same. All we want is a lead. God knows we want all the profit we can honestly make and if one man is doing it, I'll make it two and perhaps when others hear of us they'll come in out of the wet too. Only," he added sadly with a dubious shake of the head. "You'll never do it."

I buttoned up my overcoat. "Watch my smoke," I said and strode out of the store, intent on the idea I had in mind.

A Good Store But—

There was another store a few doors away, the usual type of hardware to be found in small towns and in the near-the-top class in cities, a class that is better than most and not quite as good as some. The windows were fair. One had a display of seasonable cold weather goods and the other a line of tools. The interior if not as prepossessing as the window was at least fairly well arranged.

The Jarring Note

But there was the usual jarring note. There always is. I had to wait for several minutes although there were no other customers in the store. A clerk in the rear was out in the aisle palpably enjoying a rather hilarious conversation with a friend who leaned against a stove that was inclined to be noisy of lid.

Another chap who was in closer proximity to me was hastily weighing out some nuts at the counter. He seemed in a great hurry, glancing alternately at the jerking beam and at me as he added to and detracted from the weight of nuts in the pan.

Finishing, he had two nuts over. I could not see them but I heard one as it fell on the floor and saw his face as the other one struck home in the wrong box of the rack he had tossed it into. He made a hasty forward movement as though about to change it to its proper place, thought better of, turned and advanced toward me, still looking guilty to my jaundiced eye.

A Weak Argument

"Something?" he asked. "Yes, I'd like some paint."

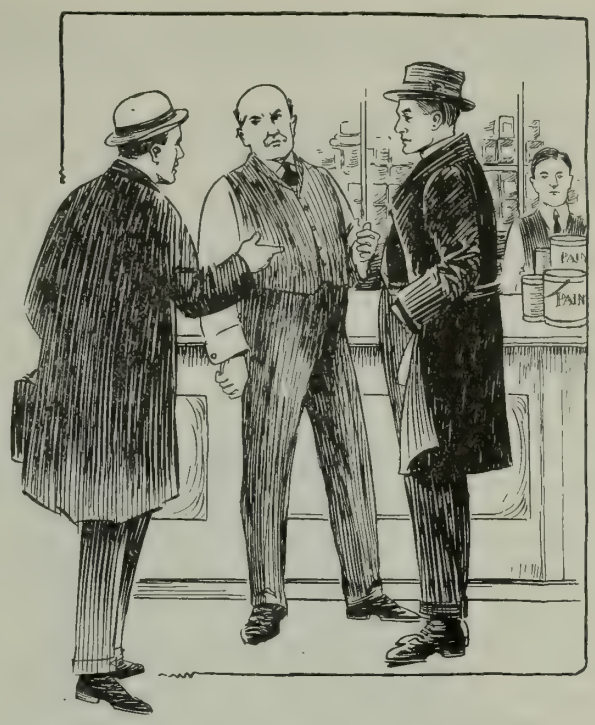
"Ready-mixed, of course."

"Yes."

"Here's the best on the market, ready for the brush and only two sixty-five a gallon." He reached up for a can.

"Why do you say 'only.' Two sixty-five strikes me as a pretty stiff figure?"

"Cause she's gone up and we're selling on the old prices."



"This paint won't cost you a cent over two thirty-five laid down in your store." . . . I simulated an angry astonishment that was really chagrin for the dealer, whom, it seemed, was sometimes sinned against as well as sinning. "Do you mean to say you are making sixty-five cents off me on a gallon of paint?" I thundered. . . . That poor travelling boy! His look was terrible when he realized what he had done.

"How can you do that?"

"Don't see why you should care. It's our funeral," he said truculently. Fine sales talk this. Got me into a friendly mood so that I would be receptive to buying ideas. Not.

"Well, I care this much," I said. "You gave a certain reason for a certain price on your paint and if you want to sell me your paint you'll have to explain to me how it is you are selling below the present market else I'm not likely to believe your bare statement, am I?"

He sulkily admitted the force of my argument but nullified the effect of the admission by a further adventure into the fields of unreason.

"Well, you see its this way: we haven't had a very good turn over in paints lately so instead of putting up our prices to correspond with recent advances to us we've kept selling at old prices on all our old stock 'cause other people are doing the same.' "

"They are," I cried.

"Sure they are, else we wouldn't be doing it."

"That's next door to highway robbery," I said. "But if everyone is doing it perhaps I can find some one who sells at two fifty-five. Thanks for the tip." And trying to look as sarcastic as I felt, I walked out.

The Pilgrims' Progress

I tried several more stores of the same general class but with no success other than a further disillusionment. They were all selling at old prices and low ones. The opportunity of getting at their reasons without disclosing my own identity failed to occur in either case and it was not until I reached the last store that anything happened to enliven the gloomy outlook of my poor pilgrimage.

A Real Find

As I entered the place a flashy looking young man broke away from the salesman whom the later conversation indicated as the proprietor. The former was one of your ultra types, clothes smart to the point of the nth dregree ad. hands immaculately manicured and hair coached back and clipped like mule's. Those nails had never been broken nor those hands skinned on the inside of a splintery keg of nails that had turned refractory and bound into one another like rigid tentacles.

The proprietor was pleasant and inquired as to my needs. I informed him. He quoted me three dollars. I pretended to study. That was standard price. I had won.

Young Hopeful to the Kill

The travelling man who had been loitering near the show case now noticed the cessation of talking and the consquent lull in the proceedings. Being young and unafraid he inserted his personality into the opening presented.

"As I was saying we'll make you the very best figure we can after allowing for advances on raw material. This paint won't cost you a cent oved two thirty-five laid down in your store." He went on easily, "Why—" And then stopped as he saw me come to quick and gleeful life in inverse ratio as the dealer stiffened up with a look in his eye that boded ill for young hopeful's future sales in that store. Apparently the latter had failed to catch the drift of my earlier inquiries.

I simulated an angry astonishment that was really chagrin for the dealer whom

Making the Seeds Drop Their Fatness

Manufacture of Linseed Oil is an Interesting Process — Extensive and Expensive Machinery Used—Bushel of Flax Contains About Eighteen Pounds of Oil

Written by a Hardware and Metal representative from an interview with J. M. Ransom, assistant manager, The Canada Linseed Oil Mills, Limited, Toronto.

A SMELL most delightfully sweet is the sensation which one's olfactory nerves experience on entering a plant for the manufacture of linseed oil. It permeates even to the business office of the concern and overrides, drowns out and makes scarce such smells as come from musty old ledgers and day books. The air is charged with the sweetness of the oil and it soothes one's nostrils like the smell of honeysuckles or hyacinths. There is a wholesomeness about the smell that seems to be invigorating, lifegiving. But this is only preliminary to the description of the process of making the oil which plays such an important part in the hardware trade by reason of its use in the manufacture of paints.

Expensive Machinery Required.

The business of making linseed oil from flaxseed is one of the important industries of the country. It is a comparatively simple process, though extensive and expensive machinery is required. The seed is crushed, cooked and the oil extracted by means of high-power hydraulic presses. Invariably the manufacturer has a large elevator for the storage of the flaxseed. From there it is taken by a conveyor to bins in the interior of the mill. The next process is the running of the seed through a separator for the purpose of removing all chaff and dirt. Quantities of oats, wheat and barley are often removed from the seed at times by this process.

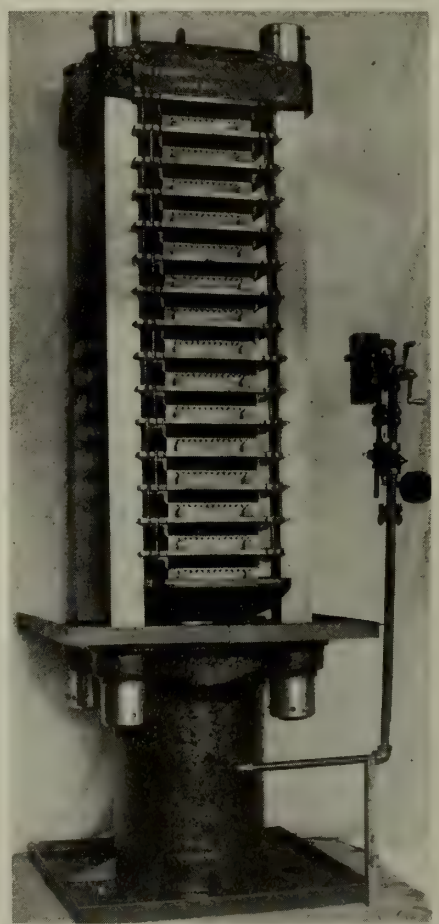
Seed is Crushed to Mead

From the cleaning machine it is carried to a hopper above the crusher. In the crusher the seed runs over a series of very heavy steel rollers, which weigh about 2,000 pounds each. After passing through the crusher it comes out in the form of linseed meal, the same as that secured in drug stores and which is used for poultices and other medicinal purposes. The object of the crushing is to put the seed in a form from which the the oil can readily be extracted.

A conveyor carries the crushed seeds to a cooker where heat is applied to the great vat-like pot and the oils and fatty substances are made more limpid. The oil flows from the meal more readily when it is warm than if in a cold state. Certain manufacturers maintain that oil pressed from the pulp without being heated is better. Paint manufacturers are in accord with this idea when the oil is to be used for certain specific purposes. Occasionally the oil is pressed from the cold meal when it is to be used for medicinal purposes. But modern machinery and the advancement made by the various oil crushers all over the world, together with the increased demand for linseed oil, make it necessary to extract greater quantities from the seed. This is accomplished by using the hot process.

Hydraulic Presses Extract Oil

After the meal has been heated sufficiently workmen draw it off from the cooker and run it into a cake former. The cake thus formed is approximately twenty by forty inches in dimensions. It is placed within the folds of a very heavy canvas and carried to the press. Low pressure is first applied in order to start the oil. When 500 pounds to the square inch is reached, automatically high pressure is adjusted and the press then obtains a pressure of 3,000 pounds to the square inch. The largest percentage of the oil is thus forced out of the meal, leaving the linseed oil cake in the canvas. When these hydraulic presses are at work the oil runs from the slabs of pressed meal like melting snow from the roof of an eaveless house on a warm spring day. Below the press it forms in a stream and runs to the receiving trays in the form of pure product. It reminds one of the oil presses of Canaan about which we have read in times past. And so the seeds are made to drop their fatness. And the oil hurries away in its golden brightness and fresh frothiness to the vats below decks.



Hydraulic press used by manufacturers in the extraction of linseed oil from the crushed seeds. The cooked meal is placed in the press on trays.

Filtered Through Canvas

The oil is then pumped from the receiving trays under the presses to tanks where it is allowed to settle and clarify to a certain extent. From there the oil is run through a filter press in which it is forced through many thicknesses of heavy canvas in order to extract any dust or dirt or fatty substance that may not have settled down. After it passes through the filter it is conveyed to storage tanks where it is allowed to age and become ripe for the market. From the storage tanks it is run off into barrels or to the tank cars used by the railways for transporting oil.

From a bushel of flaxseed which weighs 56 pounds there is approximately 18 pounds of oil and 36 pounds of oil cake. That is, in a bushel of flaxseed one-third of the weight is oil. There is a small quantity of oil left in the cake which is not extracted by the hydraulic presses. But this goes to oil the sides of the beef cattle and milch cows fortunate enough to be fed on such a diet. The slabs or cakes of the pressed meal weight about ten pounds each. Twenty of these are taken from each press after they have been squeezed a half hour to an hour. The sides and ends of these large oil cakes are then trimmed by running through a machine specially for the purpose. They are piled in the storage room. The oil cake for export is left in the form of cakes and placed in sacks, twenty-eight cakes in each sack. For domestic use the cake is ground into a meal or crushed into small pieces about the size of nut coal.

Modern Methods of Wallpaper Display

United Wallpaper Stores, Limited—Have Splendid System of Exhibiting Designs in Canadian Branch—How Samples Are Shown—Complete Record System For Samples and Stock Room

Based on an interview by a Hardware and Metal representative with a prominent wall-paper manufacturer.

THE modern idea of a judicious display of articles which a merchant has for sale is well illustrated in the methods which the United Wall Paper Stores, Ltd., Yonge Street, Toronto, have embodied in their new store recently opened. Selection of wall papers in their commodious and cheery show rooms becomes more of a pleasure than a wearisome work to be toilsomely gone through. With comfortable seats in front of their four hundred designs, the prospective buyer can go leisurely through the large selection without trying either nerves or patience. Small palm trees give the show room a southern atmosphere.

This firm has adopted a modern system of wall paper display. Frames, three feet by seven feet in size, made of steel tubing, and carrying a framework of wood covered with muslin, permit the various patterns of paper to be shown on a flat surface of sufficient size to show what a wall would look like. There are three hundred of these large frames. They are attached to the main frame by means of a socket, which allows the frame to swing back and forth the same as a door. On each display frame there is, therefore, two designs.

Top Covered

At the top of the frame, or the ceiling, as it were, is a covering of white oilcloth. To the front and top of the

View of entrance to United Wall Paper Store Co., showing display windows and electric sign.

frames are the frosted electric lights, which give a light almost as white as day. For lighting in the evening there are in addition five 200-watt nitrogen lamps arranged at intervals down the centre of the show room. To the east end of the store is an additional one hundred frames of smaller size, eighteen inches by four and one-half feet. These also swing from a frame after the manner of a door. In the large windows at the front there are tastefully arranged displays of some of the more expensive papers and borders, together with designs that may be on display for special sales.

Everything in this new show room has been conceived with the idea of placing the goods to the best advantage, with the least trouble, and with the minimum of worry and strain to the purchaser. It is often a difficult job to make a selection from a sample book. A piece of paper, about two feet square, sometimes looks different when seen on a larger surface. It is with this point in view that these large frames have been conceived. Also they preserve the samples in good shape, without danger of becoming frayed or soiled through handling. The show room on the ground floor occupies the entire floor, there being a space twenty feet by eighty feet. To the north

A complete description of the above show-room is given in the accompanying article. Note the attractive manner in which wall paper samples are shown.

side of the showroom are the manager's office and accounting department.

There is a neatness in the arrangement of the displays that gives the impression of spaciousness about the show rooms. There is none of that cluttered appearance that one often finds in a wall paper store, because the goods mayhap are piled to the ceiling in pigeon-hole storage boxes. This firm carries a large stock, having no less than 162,000 rolls on hand at the beginning of this year. Up to the present they have been devoting their energies entirely to the local trade. "Orders must leave the stockroom same day as received," is the principle by which this firm works.

To this end their storerooms above the ground floor are arranged to facilitate the speedy filling of orders. Special trucks carry the rolls of paper from the storage boxes to the shipping counter. An adaptation of this idea of wall paper display could possibly be worked out in a smaller way by means of wooden frames covered with muslin and hinged so that they can be readily turned back.

What Next! What Next!!

The Story of a Hardwareman and Some of the Pains That Beset His Path—They Have To Do Principally with Complaints About His Paint—The Paint That Streaked—The Paint that Would Not Stick.

Based on interviews by Hardware and Metal representative with retail hardwaremen.

AMONG the ills that disturb the retail hardwareman's peace of mind, are occasional complaints from his customers about paint he sold them. There was the woman who used a two and a half wire nail to stir the paint in a can four inches deep. She was somewhat fastidious about getting the paint on her fingers. So she took good care the nail did not go very deep.

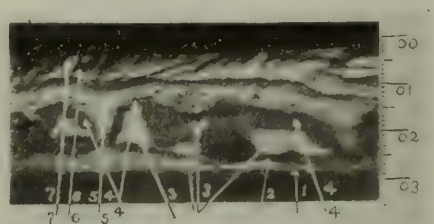
Now one of the injunctions of paint manufacturers is: "Be sure that it is stirred." That is the fabled "nail in the horse's shoe" that often causes the loss of the whole horse. In the case of the paint manufacturer it is often the pivotal point that turns all his scientific knowledge to naught. No matter how fine his goods may be, no matter how excellent the compound of his materials—they are all thrown into confusion and confounded if this one little essential is not punctiliously observed. In the case of the woman who stirred it with a nail she went to her dealer and complained that it was not the color of paint she had bought it for, or that it was represented to be. Furthermore, it was streaked with various shades. The job was a disappointment. And so she hiked off to the hardwareman to tell him that his paint was no good.

"Did you stir it well, madame?" asked the perplexed hardwareman.

"Stir it!!! I should say I did stir it! Do you mean to insult my intelligence and throw vile slurs at my knowledge of the painting art? You would infer I had never done any painting in my life, would you?" The hardwareman proceeded to graffle around for some floating straw on which gracefully to make his escape.

"No, Madame! your pardon, madame!" he floundered in beneath her flashing, scornful eyes. "You see even the best of painters might sometimes omit, forget such a simple little operation. But take this can of paint and this little patent mixing ladle, without money and without price. If you use it to get to the bottom in stirring the can, and if you do not get the right color, and if the paint is then streaked —you kindly come back and I will make out a bill of sale in your name for all my goods and chattels. Yes, and I will throw in this old hulk of a soul!"

But the woman was withal an honest woman. She also had a conscience. Unlike the cat, she did not come back, at least not to complain.



View showing seven different layers of paint. The paint peeled off when the lady put the eighth coat on. It fell off from its own sheer weight. She maintained it had been put on a new building. The dealer learned it had been put on a new section built out of old lumber.

Paint Would not Stick

Then there was the case of that other woman who swore by all the demons above that the paint would not stick. And she let loose her vials of vitriol at the hardwareman until he ducked and hunted his dugout below the counter. Safe behind his ash cans and barricade of binder twine he listened for the last sad surge of that vitriolic heaving of the atmosphere. It did die away. There is always an ending, even to the most violent of upheavals. He emerged, thinking that perhaps she had decamped. Not her. She was there to have it out. But she had soothed herself somewhat. She showed a disposition to be argumentative. She wanted to thrash the matter out. She wanted to know why he was selling such paint and what license he had to be running at large.

In the brief lull periods he managed to get in a few questions. She vouchsafed the information that the paint had been put on a new building. It had cracked and sloughed off like a leper's scales. But the merchant was from Missouri. He had to be shown. Summoning his best diplomatic powers, even in the face of his own incredulity, he volunteered to go himself and have a look at the work. If the paint manufacturers were shunting such an article on him he wanted to know it—and know it quick.

On the way to the woman's home the merchant was the bland artificer in words. He talked of every subject in town topics except paint. Then they arrived to look at the building that had peeled, his inward sensibilities were given a rude jolt. Suffering cat-fur! The paint had shelled off all right. There was no mistake about that. Also it was a new kitchen on the woman's home, for he had never seen it there before In this the woman was correct in her statement that it was a new building.

But what made the merchant's frame shake from stem to stern was the realization that it had been built of old lumber. He took some of the scaly paint to his office. With the aid of a magnifying glass his photographer took a picture of the edge grain of the paint. He deciphered no less than eight distinct layers. The last coat was the straw that broke the camel's back. It had fallen off from its own sheer weight. And the hardwareman sat down to ponder with bowed head in enveloping paws. "What next, oh Lord, what next!"

Editor's Note.—Fact is stranger than fiction. These are facts.

Beautiful Designs in Wall Papers

Fall Patterns Show Tendency to Subdued Colors with Shadow Effects—Borders Are Cheerful in Their Colorings with Veilings to Tone Down Brightness—Solid Colors in Delicate Shades.

In the elder days of Art,
Builders wrought with greatest care
Each minute and unseen part;
For the Gods see everywhere.
Let us do our work as well,
Both the unseen and the seen;
Make the house where Gods may dwell
Beautiful, entire and clean.
—Henry W. Longfellow.

WALL paper manufacturers are doing their part this year in helping to make the home a more beautiful and attractive place in which to live. Fall designs show a tendency to the softer colors in the hangings with brighter colors in the borders made soft by veilings and intaglio embossings. Some of the designs are embellished by touches of gold to enrich and make brighter. There are several beautiful designs in self-tones with gilt tracery. As with the spring designs there are ready-cut friezes and trimmers of beautiful harmonizing tones of other colors than appear in the hangings.

Pretty panels of floral sprays in shadow treatment have ready-cut friezes and trimmer of apple blossoms in their natural colorings. There are some foliage patterns in a series of exquisite self-tone offset and brightened by a frieze of base-trimmer of maple leaves in bright autumnal shades. Another of the popular designs is a foliage shadow stripe in the popular tones of buff, grey and brown enhanced by rich friezes and trimmers of large bright poppies

For the parlor there are pretty silks in designs of rose foliage and buds with a tracery of gilt These will be shown in the popular range of colors of white, cream, champagne, gray and light green. These designs are very effective with their matching friezes and base-trimmers of full-blown roses into which is introduced rather more than a suggestion of contrasting shades of nature's colorings. Also for the bedroom a diminutive floral pattern in quiet colorings with a border of orchids in the rich tones of the natural blooms should find many friends. Throughout the year there has been a special tendency to "near-plain" papers with rich fancy borders and decorations subdued by veilings.

View showing one of the beautiful Fall Patterns of Wallpaper. They are in a variety of striped patterns, embossed stripes, silk stripes and intaglio stripes. The borders and base trimmers are in rich designs of natural colorings.

—Reproduction by courtesy of Staunton's, Limited.

For the drawing room, boudoirs and the better class bedrooms there is being shown a line of solid colors in delicate shades of ivory, cream, champagne, canary, pea green, blush rose, Asia blue, seagull grey and French grey. The ceiling paper generally used with these designs is a silk draper. For halls, dining-rooms, libraries, sitting rooms some of the manufacturers are turning out designs which they designate as mattines. These are in a number of colorings embossed in high relief on special fibre stock in a cable-net design. Some of them are merely embossed on a plain fibre while others have a counter-sunk overprinting which adds considerable decorative value to them. Others again are printed with unique weave effects and in conjunction with the counter-sunk printing and embossing gives a distinctiveness to these designs.

Among the papers of quite moderate cost will be found a pleasing array of floral and foliage designs, tapestries, conventional patterns, chintzes and ribbon effects. There are pretty stripes, plain denims and self-toned patterns many of them with ready-cut borders of exquisitely colored roses, chrysanthemums, clematis or orchids. Some of the hangings have a diminutive floral trail of similar flowers introduced in the borders that go with them.

The gilt papers are bright and attractive and possess a freshness. There is an abundance of conventional and floral patterns which are specially designed for the use of gold in their coloring. There are pretty stripes with ready-cut borders in fruit and floral patterns amongst which will be noticed one of dainty rose-buds of alluring hues amidst clustered foliage which is shown over a stripe with beading of gold. There are quaint designs on fancy grounds which will possibly commend themselves for halls and dining-rooms.

There will also be a new line of varnished tile papers shown this fall. The designs and colorings have an artistic merit that is highly commendable. While there are plenty of patterns of the standard type, there are many novelties introduced that will be readily appreciated by those who are looking for something different to the usual style. One attractive pattern depicts a water-fowl disporting amidst reeds and rushes in a range of new and artistic colorings. There is also an all-over design of bamboo foliage in a variety of appropriate shades. A third design introduces scenic plaques. There are several dainty ceiling designs in appropriate shades, amongst which is a mosaic pattern. There is a range of borders from two to six bands to the width, some of which are specially made to match side walls.

Taken altogether the fall designs are most pleasing in their appearance and will greatly assist the home-builders to make their place of abode more a work of art and a thing of beauty.

Cardwriting Made Easy

by R.T.D. Edwards

LESSON NO. 15—MUSIC PENS

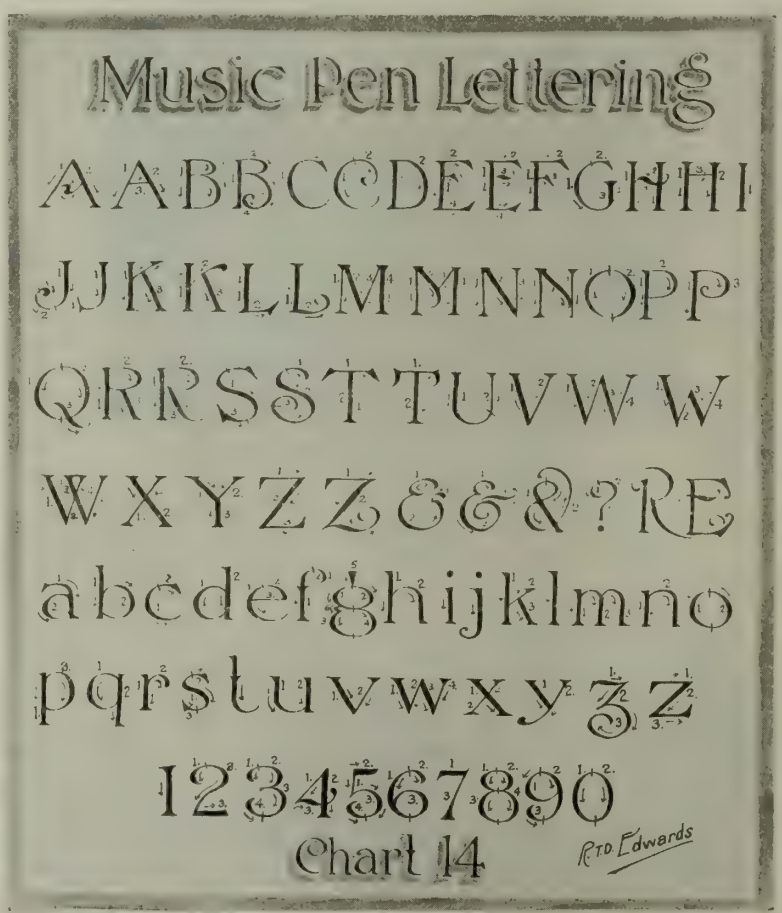
THE music pen is one of the most important of the newest tools introduced for lettering purposes. This pen was invented and used for the purpose of writing music, and it was some time before its value for forming letters was found out.

The music pen's great forte is in lettering with heavy opaque color on plain white card or mat board. For general lettering, of black on white card, the round writing pen is best, but when a finely lettered card is required, the music pen is superior.

In no case should ink be used with the music pen. Heavy cardwriting color, slightly thinned with water, will be found the most satisfactory. The surfaces of mat cards are not as smooth as the white coated cardboard and therefore require something that will not cut the surface of the card as the round writing pen does.

The music pen fills the bill completely. The color can be applied perfectly in a clear-cut manner without causing any rough edges.

The using of white color on dark mat board has been, to most beginners, very troublesome, but with the use of the music pen and a fair amount of practice, this can be overcome. The idea is to get the white, or any color for that matter, quite clear with one stroke of the pen, because it cannot be gone over a second time. The color must be at the right thickness and this can be found out only by experience. The color must be kept thoroughly mixed while in use. Do not allow the size to come to the top of the color or the cardboard will show through it.



The Manipulation of the Pen

Study carefully Figure 2. This shows two illustrations of the music pen: the first, as the pen appears when closed or ready to make a fine stroke; the second, the pen as it appears under pressure, making a broad stroke. You will notice that this pen is triple-pointed. This is the secret of its being able to flow the heavy color. A two-pointed pen will not allow the color to flow from it as freely as the three-pointed one. The principle of the manipulation of this pen is to make the narrow strokes of the letters with the pen closed, while the heavy strokes are regulated by the amount of pressure used to spread the points.

Graduating of the Strokes

The graduating of the strokes needs much practice. The best way to get used to handling this pen is to use plain white card and any show card color you have, providing it is not ink, and practise all the different strokes which are composed in the formation of the alphabet. This will give you the best knowledge of the working of this pen.

One of the most important points about the pen's work is that many sizes of letters can be made with it, graduating from very small up to its capacity, about an inch in height. Figure 2 shows different sized letters made with the same pen.

Mat Board

As stated before, the principal use of these pens is for lettering on mat board, therefore it is necessary to know something about this. Mat board was not first made for

Suggestions for seasonable show-card. This makes a very neat and attractive design.

The accompanying article is No. 15 of a series on "Card-writing Made Easy," prepared by R. T. D. Edwards, especially for the readers of HARDWARE AND METAL. *Judging by the many letters received by* HARDWARE AND METAL *from readers since the commencement of this course, it is quite evident that a great many retail hardware salesmen are following the course closely and have taken up the art of cardwriting as a direct result of the series now running in this paper. Merchants in every line of business are using more show cards now than at any previous time. The value of the self-advertising goods is realized now to a greater extent than in the past. Appropriate show and price cards make merchandise self-selling. The course now running in* HARDWARE AND METAL *is undoubtedly the most complete that has ever appeared in a Canadian trade paper.*

Suggestions for seasonable show-card. A design which has a drawing power because of its uniqueness.

show cards and is not made now exclusively for this purpose. Its main use is for picture mats, photo mounts, calendars, etc. Show cards are really a secondary consideration with matboard manufacturers. Nevertheless, many plain and fancy matboards can be worked up into fine, attractive show cards. It is not advisable to stock up with fancy boards. The plainer kind are the best for all classes of fancy showcards. The kinds most advisable are cream, buff, light, dark and medium grey and brown tones. Many different finishes can be secured in these colors, such as linen, pebble, ripple, clouded, besides the plain. The plain finish is preferable where fine, accurate lettering is necessary.

Some Matboard Finishes

Figure 1 gives an idea of some of the finishes procurable. Do not stock up heavily on wood grain boards, because there are not many occasions when they can be used to good advantage. Wood grains can be obtained in oak, walnut, mahogany, etc.

Make Your Own Covered Boards

Cardwriters who do not wish to go to the expense of ordering matboard can make a very good substitute by getting cover papers from wholesale paper houses. These can be mounted on plain pulp cardboard, by using a heavy flour paste. To keep the card from curling, paste a cheap paper of the same weight on the back of the card and press it under a heavy weight until dry. A very beautiful assortment of fine colorings can be obtained in this way.

The Chart

In general appearance this lettering is very similar to the round writing pen work shown in lesson 13, but in execution it is vastly different.

"A" is a good example of the use of the music pen. Stroke one is made with the pen closed, while stroke two is made by using more pressure to get the broad line. To make stroke three, use heavy pressure in the centre of the stroke. Both ends of this stroke should be made with very little pressure, to get the fine lines. Stroke three of the second "A" is made with the pen closed.

"B" is a letter of three strokes. Pay special attention to strokes two and three. The heaviest pressure must be used in the centre of each stroke. The second "B" is composed of four strokes. Stroke four is used to give a variety to the work, but should only be used at the beginning of the "reader" of a showcard or in headlines. Never use a fancy letter in the body of the "reader."

The "C" in both cases is a two-stroke letter. The difference in the manipulation of the music pen from the round writing pen is illustrated in the second "C." Note that stroke two is finished by shoving upwards on the pen which would have to be completed with two strokes with the square-pointed nib.

The "D" is the same in appearance as that made with the roundwriting pen.

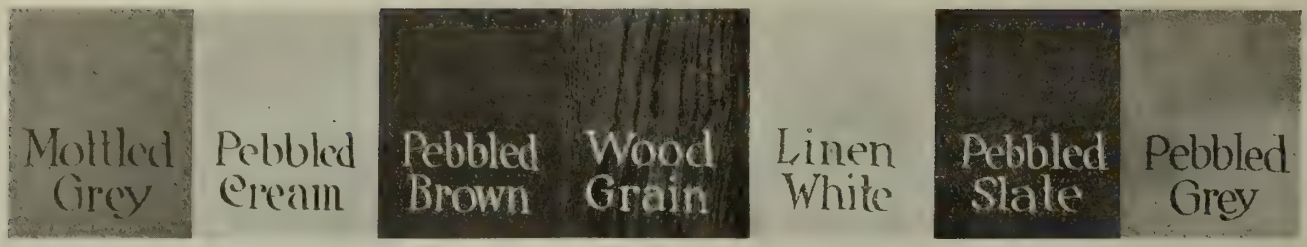
The spur-making on the "E" and "F," as on many other letters, should be watched carefully. By much practice these can be made with one stroke. To make the right hand top spur, spread the pen the full width at the commencement and as the stroke is made release the pressure gradually until the fine line is reached. The bottom spurs must be made just the reverse. Stroke three of the second "E" is made by starting and ending with a fine line, using pressure on the pen in the centre.

"G" is a three-stroke letter. Care must be taken with the joining of strokes one and three.

Stroke three of "H" is made after the same manner as stroke three of the second "E." This style of "H" should not be used in the midst of the "reader," but only for heading purposes. The second "H" is of the plainer variety and can be used on any part of the card. Take care to make the two outside strokes parallel.

Care must be taken to keep the "I" at right angles with the guide lines.

It is best for beginners to make the "J" with three distinct strokes. With practice this can be made with one



Some of the finishes procurable in mat board.

entire stroke. The second "J" shows the use of the spur on the tail.

Note that stroke two of "K" joins stroke one above the centre. The second "K" shows a variety in stroke two.

A plain and fancy "L" is also shown. Stroke two of the "L" is made with one stroke.

The "M" is a letter that always needs careful practice. Be sure to make the lower centre point at equal

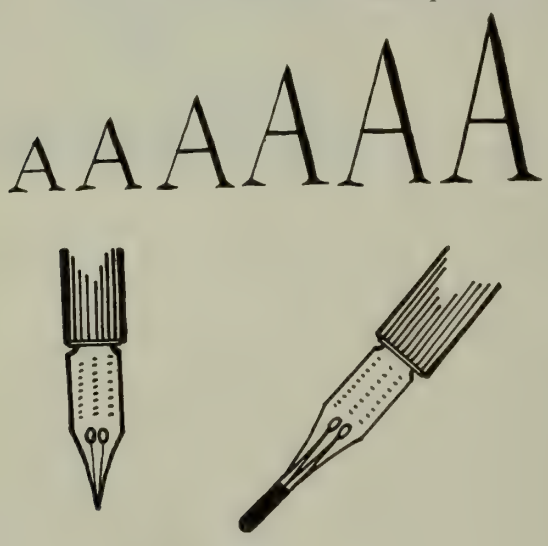


Fig. 2.

distances between the ends of strokes one and four. The second "M" shows a variety in stroke two.

Joins, similar to that where stroke two joins stroke three, have to be completed with the point of the pen. Stroke two of the second "N" shows a curved stroke instead of a straight one.

The "O" is completed with two strokes. Note that the widest part of these two strokes is midway between the guide lines.

The first "P" is a plain one and the second one is of a fancy nature for heading purposes.

The "Q" is the same formation as the "O," with stroke three added. This stroke should present a graceful appearance.

Two styles of "R" are shown. The first of plain variety. The second shows a change in stroke two. This makes a nice variety for illuminated caps or headline use.

Two styles of "S" are shown; first, the plainer, spurred letter, and the second the long, sweeping tail variety.

Only in the spur-making do the "T's" vary. The second letter is quite popular for headline work.

The main part of the "U" is made with two strokes of the pen. Much practice is needed to perfect stroke one.

The manipulation of the pen for the formation of "V" and "W" is very similar. Give particular attention to the formation of the last "W"; note how the strokes cross.

The formation of the "X" is similar to many others shown in previous lessons.

The "Y" is also the same formation as shown before. Be sure to join strokes one and two a little above the two guide lines.

The "Z" is of the plain Roman formation, but the second "Z" is of the fancy variety.

You should practise many times the formation, but the second "Z" is of the fancy variety.

You should practise many times the formation of the "&'s." They are being used constantly by cardwriters. Many other styles can be made, but these are sufficient to start.

The lower case formation is very similar to the round-writing pen formation and does not need any detailed explanation.

The arrows show the directions in which to draw the pen and the cross bars show where the continuous strokes join, so with following the same principle as explained for the upper case lettering you should be able to master the lower case without much difficulty.

A NARROW POLICY

It was in an up-to-date store, small, but in a neighborhood of excellent buying powers. A lady had paid for an article and taken it home, looked at it again the same night, did not fancy it and decided to return it next morning.

The young man unwrapped it and shook his head.

"No, this is soiled, we cannot take it back, can we?" —holding it up to a man at the back. He backed him up in his refusal.

"Well, it's exactly the same as it was when I got it —you soiled it wrapping it up"—which was probably true. "It's no good to me, and I don't want it," and she tossed it down and went out. The writer heard of the incident and her conclusion: that a store that makes it so difficult and unpleasant to accept goods back could not expect her trade. She would go to the bigger stores down town that tried to satisfy their customers.

Her criticism of "uptown" stores does not apply to all, or nearly all. The number who are adopting a more liberal policy is increasing,—and fortunately for themselves. The other policy is becoming more and more foredoomed to end in failure.

The sharp tongue is a weapon that is always loaded, and is often more dangerous to the owner than to the target.

The most potent factor against success is discouragement. The man who becomes discouraged has already lost half the battle of life.

Putting Punch Into Show Cards

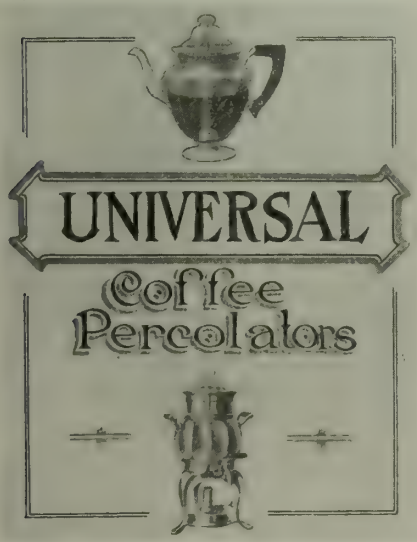
Showing How Card-Writers by Using Illustrations from Advertisements in Hardware and Metal, Can Make Show Cards Doubly Attractive

Written for Hardware and Metal by Thos. O. Crawford.

SHOW cards both for window and interior displays to be effective, must have punch. There is no better way to put punch into a show card than by using a good live illustration.

In the large department stores, expert carwriters are employed. Most of these men are trained in lay-out work, and draw suitable illustrations for the cards they prepare. It frequently happens however that in the hardware store the task of preparing show cards falls upon the window trimmers. In the department store, the window trimmer places an order for show cards and it is filled by the card-writer. The hardware store window trimmer has to prepare his own cards.

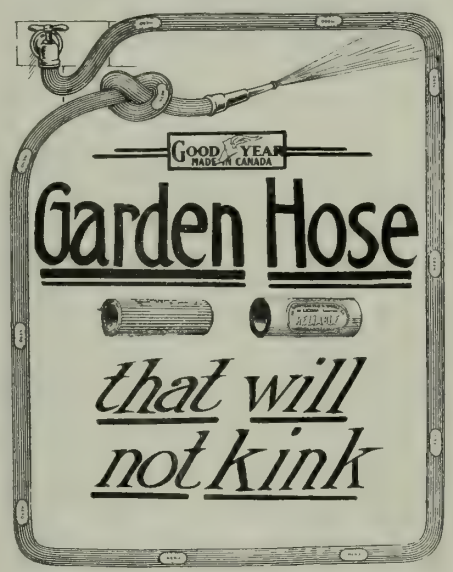
Now a fact that must not be overlooked, is that a great many hardware window trimmers are expert card-writers. Many of these men have become card-writers by studying the many excellent card-writing series which have been published in this paper. On the other hand, there are many window trimmers who can do the lettering on show cards, but are unable to draw suitable illustrations. These are the men who can benefit mostly by the articles which appear in Hardware and Metal from time to time, showing how



The illustrations used in preparing the above show-card suggestion were taken from an advertisement which appeared in the Feb. 19 issue of Hardware and Metal.

show cards can be made attractive by using illustrations taken from the advertising pages of Hardware and Metal.

Every issue of this paper contains a large number of striking advertisements. Not only can the cardwriter use the illustrations taken from the advertisements, but the latter he can



The illustrations used in preparing the above show-card suggestion were taken from an advertisement which appeared in the Feb. 26 issue of Hardware and Metal.

very often find the wording that he needs for his show cards.

This issue of Hardware and Metal is cram-full of splendidly illustrated advertisements, and the card writer should be able to secure enough ideas, and illustrations from this one issue to prepare a large number of show cards, which could be used to advantage during the coming spring and summer.

A Few Examples

The accompanying illustrations show three attractive show card suggestions. The illustrations used in preparing the show cards were taken from advertisements which have recently appeared in Hardware and Metal.

These cards although attractive in appearance, were easily made, and are inexpensive. The tools and materials used were as follows:—No. 6 red sable brush; also a smaller size; stub pen, no. 1½ round writing pen, ruler, photo paste, black cardwriter's ink, for pen and brush, white card-board, scissors.

The illustrations including border, used in preparing the garden hose card were taken from an advertisement in the Feb. 26, issue of Hardware and Metal. The illustrations were cut out from the advertisement and mounted on a sheet of white card-board measuring 10 in x 12 in. White photo paste was used to mount the illustrations on the card-board.

The trade-mark shown on the card was taken from the advertisement, but the wording, "Garden hose that will not Kink" was made with a No. 6 red sable brush. The underlining was done with a brush.

The illustrations used in preparing the card featuring coffee percolators, were taken from an advertisement which appeared in the Feb. 19 issue of Hardware and Metal. This card measured 11 x 14 inches. On the card the word, "Universal" is prominently featured. This lettering was done with a No. 6 read sable writing brush. The lettering is called brush stroke Roman. The remainder of the lettering on this card was made with a No. 1½ round writing pen. The shading was done with a small brush. The small ruling around the edge of the card was done with a stub pen in black ink.

The illustration used in preparing the Stewart horse clipper card was taken from an advertisement which appeared in the Feb. 19 issue of Hardware and Metal. In preparing this card the full page illustration was used, and was posted on a sheet of card-board. The

The illustrations used in preparing the above show-card suggestion were taken from an advertisement which appeared in the Feb. 19 issue of Hardware and Metal.

work in this card, with the exception, of the first two lines, was done with a stub pen.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

This is Article 8 of a new series of practical problems for sheet metal workers, prepared by a practical man especially for the readers of Hardware and Metal. Hardware merchants conducting tinshops have told us that they and their men have found Hardware and Metal's sheet metal courses to be of inestimable value to them, and in many cases they have filed the problems, with the result that they now have several complete courses which employees consult when confronted with sheet metal working problems.

THE patterns necessary for a branch pipe are required. The main pipe and branch both being the same diameter. Fig. 1. let E F G H L M N O P be the elevation, with A B C D the plan of main pipe and J K the plan of the branch piece.

First divide plan A B C D into equal parts 1, 2, 3, 4, 5, 6, 7 and repeat until the whole of the circumference is divided. Next draw dotted lines down until they intersect the joint at L M N.

Now divide plan of branch piece J. K. in the same manner as was adopted in plan A B C D.

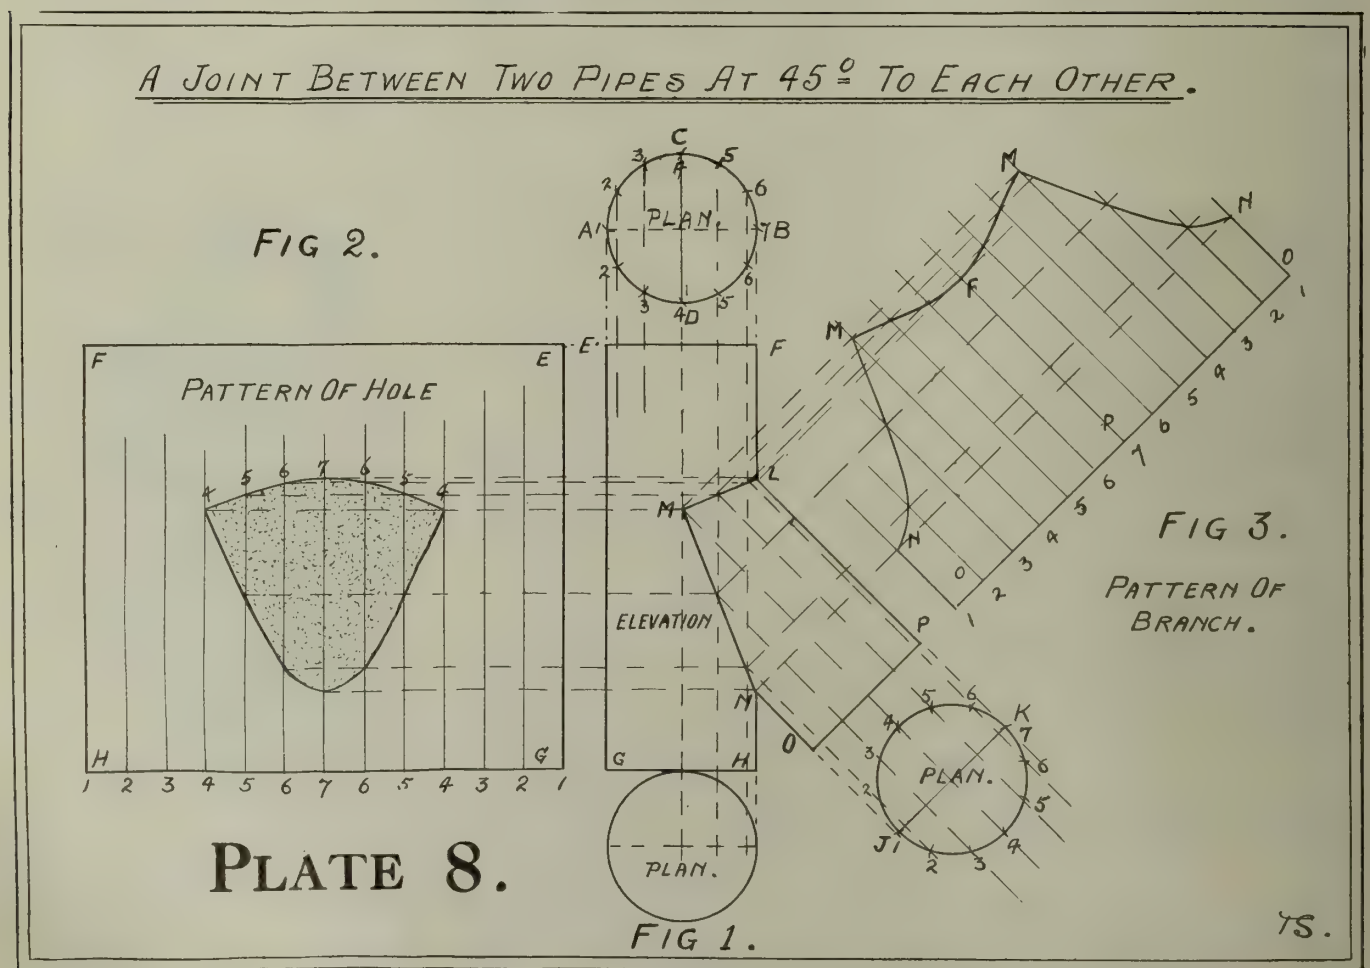
Next draw dotted lines upwards from 1, 2, 3, 4, 5, 6, 7 plan J K until they meet the dotted lines drawn from plan A B C D. These lines should meet at the joint L M N.

The next step to take will be to draw stretchout lines, as shown in Fig. 2 and Fig. 3 respectively.

First draw the stretchout line Fig. 2 as shown at F E H G. These points give the total length of main pipe.

Now transfer the measurements on plan A B C D. 1, 2, 3, 4, 5, 6, 7 and repeat backwards, making 7 on line H, G the centre.

Next draw the stretchout line for pattern of branch piece as shown by line O P O Fig. 3. and transfer the measurements from plan J K 1, 2, 3, 4, 5, 6, 7 repeating these backwards in same manner as was done in Fig. 2.



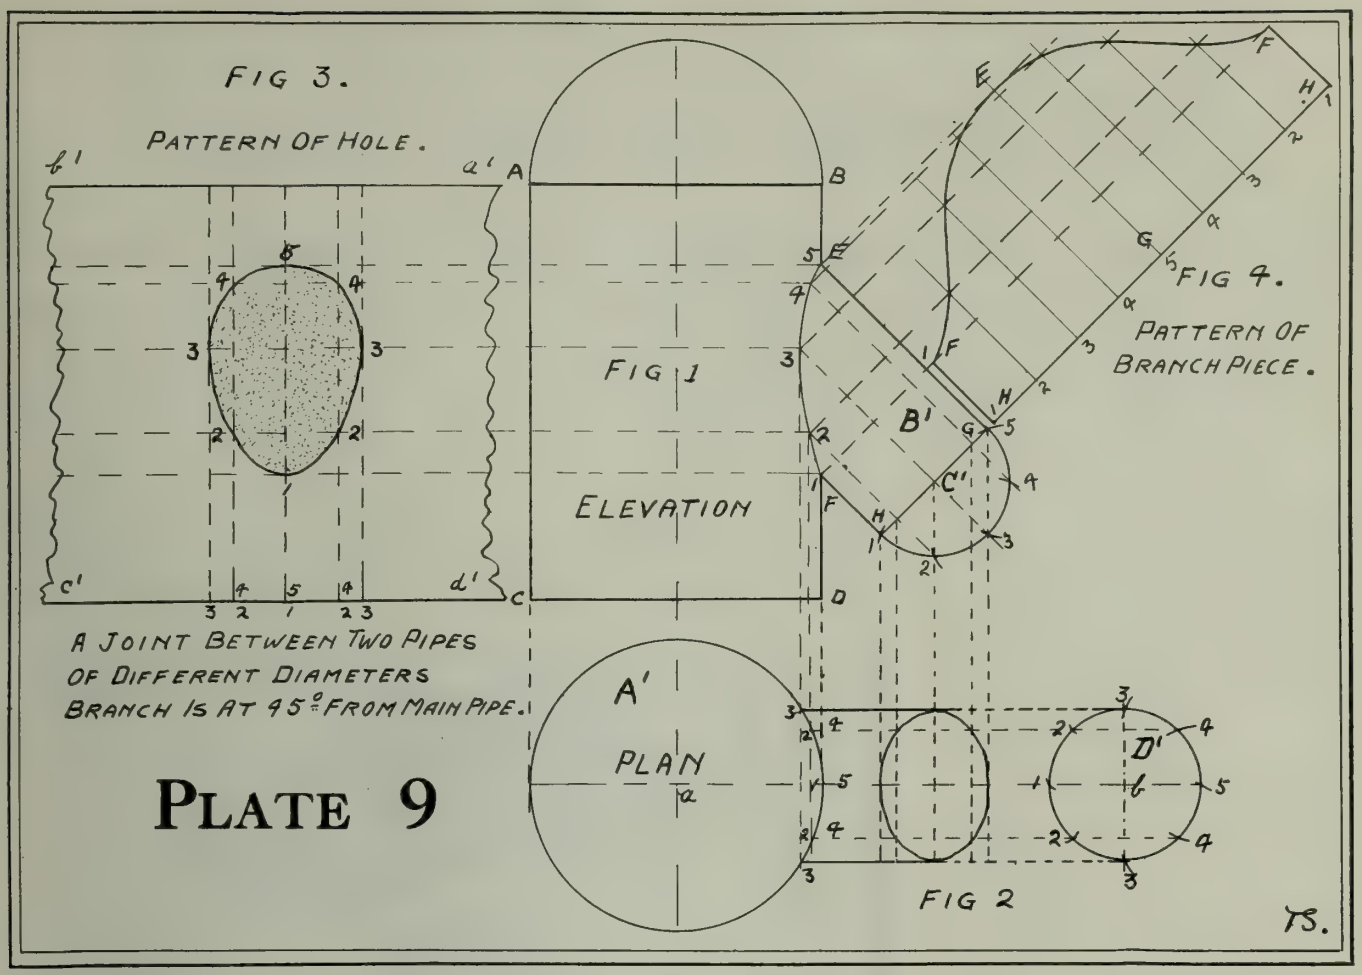


PLATE 9

Now draw lines upwards from 1, 2, 3, 4, 5, 6, etc. on both the stretchout lines in Fig. 2 and 3.

From line 7 Fig. 2 draw horizontal line until it meets point L on elevation, and repeat by drawing lines from 6, 6 Fig. 2 to intersections on M L elevation until the four lines are drawn.

Next draw three more dotted lines from 5,5 6,6 and 7,7 Fig. 2, to the intersections on joint line M N. The points where these horizontal lines, cross the vertical lines 1, 2, 3, 4, etc. Fig. 2 as shown by the shaded portion is the pattern of the hole required for the branch.

Now draw a number of dotted lines in line with the stretchout shown in Fig. 3 from the various intersections on joint L M N in the elevation Fig. 1, until all the stretchout lines have been crossed in Fig. 3.

Now draw the curved lines from N to M. M to F. F to M and M to N. Crossing each point already crossed as shown at 1,2,3,4,5,6,7, etc. The outline M F M. N N O O is the pattern for the branch piece required.

An allowance must be made for seams and joints, these to be determined by the person making the pipe. If a riveted joint, only one width of caps would be necessary, but if a locked seam is required it would be necessary to allow three times the width of the lock

In Plate 9 is shown intersection of two pipes of different diameters, the branch or piece being at 45° angle. Make the diameter of the large pipe 3 inches and the branch 1½ inches, the height of the large pipe 4½ inches.

A 1 represents the plan of large pipe struck from centre a, and shown in elevation Fig. 1.

Now draw outline of branch piece represented by B^1 and draw half plan at end of B^1 as shown at C^1 and divide into four equal parts as shown from H 1 to G 5.

Next draw a dotted line through plan as shown at a to 5 and with b as centre drow a circle D^1 to represent another plan of B^1 and divide this with 8 equal parts as shown 1, 2, 3, etc. to 5 and repeat.

From the intersection in D^1 draw horizontal lines intersecting the large circle A^1 as shown at 3^1, 2^1—4^1, 1^1—5^1. 2^1—4^1 and 3^1, from which points erect perpendicular lines; intersect them by lines drawn parallel to the lines of the smaller pipe which have similar numbers from C^1.

A line drawn from E to F through the points obtained will describe the required mitre between the two pipes.

The same course is followed no matter what the diameters of the main pipes or branches be.

To devlop the pattern of the small pipe extend a stretchout line as shown from G C^1 and transfer the measurements described on plan D^1 to stretchout line H G H.

Now erect a number of lines at right angle from these points, then draw a number of lines from points on mitre line F 1, 2, 3, to E intersecting all the lines previously drawn at right angles with stretched line Fig. 4.

Trace a solid line through these joints of intersection, and the pattern for small pipe is complete, except that allowance must be made for locks, seams or caps as the case may be.

To develop the shape of opening required in large pipe, extend lines A B and C D as shown in Fig. 1, thus describing a part of the stretchout necessary to develop the shape of the opening upon. Now draw 5 horizontal lines from points 5, 4, 3, 2, and 1 on the mitre line, parallel with lines a^1 b^1 c^1 d^1.

Next transfer the measurements of the various intersections described in plan A^1 Fig. 2 on to the line c^1 d^1 as shown at 3 4/2 5/1 4/2 3, taking great care to transfer them accurately, on account of their being slightly different.

Now erect perpendicular lines from the measurements transferred intersecting the horizontal lines previously drawn from mitre line in Fig. 1.

By tracing a line through points intersected the pattern of the opening described by shaded part is complete.

(Continued in Next Issue)

THE JUNIOR CLERK'S PAGE

The Moral of a Lost Opportunity

The Builder Unfolds a Tale of Two Hardwaremen—Trying to Help a Man Who Wouldn't Help Himself and Being Baulked at It—The Hardwareman Who Not Only Saw His Opportunity But Seized It and Followed It Up.

Written for Hardware and Metal by Norman Lewis.

WE had just settled down for an after-dinner cigar, following a fine satisfying spread of the reunion variety. Jim's wife could be heard clattering around amongst the dishes in the mysterious rear; his boy was fiddling with a jig saw puzzle on the floor, and our cigars were going finely.

"Well, Jim, how goes the battle?" I asked.

Jim crossed one plump leg over the other. The very action indicated in some intangible manner a state of prosperity. Jim had that plumpness and that contemplative steadiness of eye that goes with prosperity anyhow, so the illusion was only heightened, not created.

"So-so. Can't complain," he smiled. "What's doing?" I inquired.

"Building."

"Building?" I repeated, and added, by way of explaining my perplexity: "and in these times?"

"Yep. Why not? The houses are spoken for, so I should worry. Others are doing it, too, around here. Altogether there are a round dozen houses going up in this immediate district, war or no war."

"Well, it's a little unusual, that's all," I explained. Then my reportorial instinct coming to the fore, bringing with it visions of affluent hardwaremen, now life in old lines, a rejuvenated builders' hardware line, grand opportunity, etcetera, and so on, I flashed out: "Is there a hardware dealer near here?"

Jim smiled a superior, an enigmatical smile. "Yes and no," and eased himself forward to knock the ashes from his over-laden cigar. I waited for the explanation the words implied.

"You see my decision about going on with the two houses I am building came to a head—a sort of sudden fruition in a night, or to be accurate, at night, owing to an unexpected telephone message I received just after supper one night a few months ago. Everything was up and ready; workmen told off waiting in expectancy, and so on, just requiring this final word for my orders to go into effect.

But amongst the things I had left pending was an order for some shovels and other tools for my excavating, as I did not want to buy them until I was sure the work would go ahead. I figured on ordering them from this fellow up street.

"Well, as I say, I got the word, and I 'phoned the boys to be on hand in the morning, and that the tools and other things would be here by working time. Then I suddenly remembered I didn't

The above display was arranged by P. E. Hughes, for the D. H. Douglas, hardware, Chatham, Ont., and attracted a great deal of attention. The details of the battleship are as follows :—

The Hull of the boat is made up of two cross-cut saws, cutting teeth on top which form the railing. The masts are two eye augers supported by line twine. A wire toaster stretched across the top to represent the wireless telegraphy, cookey cutter on the front for the crow's nest in which two saw sets represent cannons. The cabin is four India oil stones, two on each side, two cabinet scrapers for the ends and five-2-inch rules for the top. A hand drill for the steering wheel, a 3-inch strip of sand-screen for the railing of the cabin. The smoke stacks are 2 sticks of belt dressing. The fenders are four samples of binder twine. A tape line box-wrench with an automatic punch represented the cannons, also cold chisel, saw sets, gauges, hose-nozzles to represent cannons. These were stationed here and there along the edge of the boat. The warship was named "H. M. S. Vigilant". Oyster shell on blue paper was sprinkled over the floor of the window to represent water. A fort of alabastine was built at the end of the window and a paint display arranged for the background. Toy soldiers were placed in a few of the principal spots.

You can arrange the description of Aeroplane to suit yourselves as the photograph explains everything.

The details of the aeroplane are clearly shown above. It will be noted that articles from the hardware stock have been used in its construction.

know this hardwareman's name, and, as I had to beat it down town first thing in the morning, and as the store lay in the opposite direction from the street car line, I decided to run up street and see if he was open, or if he wasn't open, to take his name and 'phone him in the morning.

"So I grabbed my hat and beat it up the line, only to find things closed up. So I got my notebook up to take down the name on the store front."

Here Jim paused for a moment, the better to inject a little pep into his remarks. Believe me or not that he attained that happy result by coming down with the full weight of his fist on the table.

Rummy, didn't have his name on his store front. I looked in vain for it. Not on the window; no, nary sign. The awning was up for the night, else I might have discovered it on that. Of course, I could have found out by asking some of the neighbors, but it wasn't my funereal. There were lots of other hardwaremen about. Next morning I kept my eye pulled when I got on the car going down to the city, and a few blocks down the street my eye caught a flaring sign in a store front: "Jas. Turner & Sons, Hardware In Any Line." I jotted down the name, and when I got down to the office I 'phoned this store and ordered some picks and shovels and things. I had to explain what they were for in the course of the order, and in a jiffy the fellow on the other end of the wire straightened up. I could almost see him do it. His whole attitude changed, but not offensively so, you understand.

"Going to build?" he asked. I said yes, I was. "I'd like to have a little chat with you," he said. "What about?" I asked. "About further orders as the building advances." There was lots of bounce and come back in that fellow's father's son. "All right," I said.

Well, right then and there that fellow made a date with me. He kept it on the nail, got particulars of the size of the job I was on. After a few minutes' seance with his cost book and a pencil, he spread out a price proposition that combined with the service he offered made me agree to give him my business in these two houses. And he's been hitting the bit ever since, fills all orders promptly and comes around soliciting every few days, making sure no new wants have turned up or that old ones have not been properly attended to. And the son-of-a-gun's gouged his way into a lot of business on these other houses that are going up. The other fellow, old Rip Van Winkle, came to about three weeks after my first order was placed, told a hard luck tale, and talked about being neighborly and buying my goods close at home, and so on. I told him there was nothing doing.

"So that's what I mean," continued Jim, "by saying what I did as to whether or no there was a hardware store here. There is, but the owner's asleep at the switch. He'll be driving the other fellow's delivery wagon in another year or two at the present rate of going of them both. It's sure casting pearls before swine to expect a small firm like this to pull such a fellow out of the hole in dull times."

The youngster, tiring of his toy, came over to Jim's knee and proceeded to monopolize the conversation. "Papa, I like the hardware store; it's so nice and shiny." Jim elucidated: "The boy's eye is caught by all the brass and nickel work of the specialty lines. He seems to like to futter around amongst the tools and things too. He makes me take him down at times, just as though it was a show."

"What are you fellow's so busy about?" I turned around. It was Jim's wife. She was an entrancing picture as she stood there smiling quizically at her family. The domesticity of the scene was heightened by the dish towel in her hand, as she softly rubbed an already resplendent bowl.

"Collecting opinions on what makes hardware stores attractive," I said.

"Do you want mine?" she asked.

"Sure thing," I said.

"Then I'll tell you . A hardware store to be attractive should first of all be neat and clean, always. Get that now; always neat and clean. Next to that, I want the price right; also I want to be able to pull things around and to be able to see things spread out before my eyes in baskets and things, so that I can compare quality, size, and so on. Paper and words are well enough to transmit price comparisons on, but not the others—they're too subtle."

The speaker rose. "So that's a woman's opinion about a man's business that depends upon pleasing women for its success, and I'm going back to my dishes."

Jim looked after her admiringly. "She's some right. Still, I don't altogether agree with her. She's taken up too much by the mere appearance of things—the same as the boy when he says he likes the shine of a hardware store. Personally there are just two things, and in the order named. I insist upon quality or quality value and service. The price is a minor consideration, but it is automatically regulated by the matter of quality. That is a high quality article can be sold to a discerning buyer at any price. It's like some markets to-day: it's not a question of price. It's a question of delivery. And, I tell you, the delivery of first quality goods is one of the hardest propositions in the world from a buyer's standpoint."

"Well, here I am forgetting all about old Rip Van Wrinkle.

"My brother-in-law was up a few days ago. He keeps a hardware store just outside the city. He's full of live wire stuff; just a kid, but he's made his way by hard work and hitting the bit. Started in a little two-by-four hole-in-the-wall plumbing place; studied nights, drew up all his own plans, and did all his own jobs. Consequence: in a year's time he had his opposition working for him as a journeyman plumber, and he blossomed out into the hardware business in a small way. That was five years ago, and now he has a rip-starter of a store and eight men working for him.

"He told me he had just finished taking stock and he'd surprised himself. He'd done thirty-eight hundred dollars more business than he thought he had, and he blamed it all on his new line—auto accessories. He says that it's pulled him out of what would have been a bad year for him, and made it a banner one instead. He's even branched out into selling cars. He says it's a wonder, and he specializes on specialty lines, too. Has a big range of stock, but a slim showing of each line. Great head.

"Well, I got side-tracked. The kid inquired, just as you did, as to whether there was a hardwareman up here. I told him about my dead friend without wising him up to the moratorium feature of the case, and he said he thought he'd go up and take a look around, as he always did in a strange neighborhood, to see if he couldn't pick up some ideas. So off he went.

"He was back in half an hour. I thought he would bite his own ear. He was that mad. He said it wasn't a store. It was a hole in the wall. Old Rip had talked hard times, but on the whole was pretty well satisfied with what he called his 'business.' It seems that because he had equalled the business of the year before, and because he turned his stock over twice a year, he thought he had done splendidly. There were tears in his eyes as big as three-inch nuts. The kid himself you know makes a regular ball out of his stock. It doesn't turn over. It simply rolls along over and over like a ball. I laughed and told him of my experience. The recital actually grieved him. It hurt the hardware part of his soul, I think."

Jim paused and looked at me thoughtfully. "I wonder what it is that makes a good hardwareman get so worked up over slipshod methods and lost sales opportunities on the part of dead ones? His latent power of salesmanship?"

I couldn't answer his question. Can you?

WHAT OTHER PAPERS SAY

USE PRESENT COST AS BASIS

From Canadian Grocer

Attention of our readers is directed to the first article in this week's issue based on replies of some thirty-five merchants to an important business management question. The question was asked whether the dealer favored basing his selling price on the original cost of the goods, or on what it would cost him to replace them. The answers show the majority are in favor of present cost; that is, if they purchase an article for a certain price and before it is all sold the price advances, they advance their selling price accordingly. In other words, they favor taking advantage of the profit accruing to them from their good buy.

Others, however, do not favor this or at least they do not always follow this course. Many claim to be governed by competition. If their competitors took advantage of the rise in the market, they say they would do the same, but when their competitors continue to sell at the old price, they deem themselves to be in duty bound to do the same.

The question, therefore, has brought up a difference of opinion and will bear further discussion. If a farmer buys a horse at $100 and finds that through some cause or another the price of horses advance, and in six months' time he would have to pay $150 for the same horse, is he going to consider its value at $100 or $150? The answer is obvious. Why shouldn't the retailer who happens to get in right on a particular market take advantage of the rise in that market. That is logical reasoning, but if, of course, competition is so keen, as a number of dealers say it is, then this method might not always be the best one to pursue. Nevertheless, it is undoubtedly a sound business principle to base prices on present cost.

CONSIDERATION DUE THE TRAVELER

From Men's Wear Review

The attitude of the merchant toward the traveling salesman should be based on business principles. The merchant should accord to the representative of the manufacturer and jobber the same consideration and attention that he in turn expects from his customers.

This is not always found to be the case. A contemporary cites the following incident to show what the traveling man has sometimes to contend with. The senior partner of a big importing house, being not altogether satisfied with the returns of a junior traveling representative, called the young man into his room and asked him to give a demonstration of how he tried to sell merchandise. The traveler did so in a manner, respectful, dignified and convincing, but the proprietor thought that he could improve upon it, so he told the salesman to sit at his roll-top desk and play the part of a retailer, while he went outside to act the drummer. The chief, outside the room, knocked at the office door. No answer. He knocked again and louder. Still no answer. So he opened the door and walked in, to find his erstwhile salesman with his feet on the roll-top desk and a pipe in his mouth. "Get out o' here!" he shouted to the supposed salesman. "But you don't know what I ———." "I don't want to know! I don't care what you've got, or who you are!" blared the man at the desk. "You're the sixteenth salesman who's called here to-day, and that's enough for me. Git!"

This anecdote may be tinctured with a certain degree of exaggeration, but it is nevertheless true that the traveling man frequently has to face indifference and even discourtesy. It is in the interests of the retailer to at least give the traveler a hearing. He may have something worth while to sell and, in any case, is a fellow salesman and as such deserving of friendly consideration.

HOW ADVERTISING TENDS TO REDUCE SELLING COST

From Printers' Ink

"The most important function of advertising is in causing greater concentration in industry," said Edward A. Filene, of the famous Filene store, in Boston, in a recent address before the members of the Los Angeles Advertising Club. "Large advertising tends to concentrate business into larger units, and this is a good thing, because it tends to reduce the cost of selling. The cost of doing business at retail in this country to-day is simply disgraceful—and this is not the individual retailer's fault, either. It simply means that we are inefficient about it—there are all sorts of wastes and dislocations in the process of getting goods from the manufacturers into the hands of the consumers. I believe in large advertising because I know that it reduces the cost of doing business, and therefore gives the goods to the consumer more cheaply. I don't mean, however, that retail business must develop only along the line of the department store—there is just as much opportunity to concentrate in the selling of a specialty. Filene's is a specialty shop doing a $10,000,000-a-year business.

"Retail advertising at present is done very badly, it seems to me, in spite of the fact that we are training ourselves to do better work and through the medium of advertising clubs and similar organizations to know more about it. We educate the public to expect special bargains at reduced prices when the moon is in some particular quarter, or at the full—and yet our fixed costs, our expense of doing business, remain the same, day in and day out. Our institution has done away with special sales and bargain inducements altogether, and we find that it works, in the long run, to our very great advantage. Though I believe that most men are good at heart, and will do the right thing if they are intelligent enough to see what it is, we business men have fallen into a habit of conventional misstatement in our retail advertising which we first endure, 'then pity, then embrace'—and finally forget that it is wrong.

"If we don't get returns from our newspaper advertising it is largely our own fault. People won't respond to advertising if they have no faith in the paper they read. We foolishly and wastefully encourage disbelief in advertising by allowing the newspapers to print our ads alongside those of patent-medicine quacks, get-rich-quick schemers, 'massage parlors,' and so on. It isn't enough to have a majority of the ads in the paper honest—you can't tolerate an egg which is nineteen-twentieths good!

"Advertisers have no business to try to interfere in the editorial policy of the newspapers in any way whatever. When they do so, they simply destroy the confidence which the readers have in the paper, both the news and advertising columns. It doesn't matter what the editorial policy is, it can't hurt any legitimate advertiser—if it is an honest policy. I think the endeavor to get publicity in the form of news articles is absolutely wrong. If the facts involved constitute real news, the papers will publish them anyhow; and if they are not real news, we have no business to try to force them into the paper. The attempt to shape the editorial policy of the newspaper results in the formation of a vicious circle—it hurts the readers and hurts the advertisers and, finally, it hurts the city. If there are things that are wrong anywhere, the sooner the light of publicity is shed upon them the better. You can't stop an epidemic of typhoid or yellow fever by covering up the facts."

GROUND GLASS

From Paint, Oil and Drug Review.

Few people realize that ordinarily, glass, if powdered, makes a fairly good abrasive.

The only difficulty in the past has been that glass, when reduced to a certain size, is so hard that grinding machinery would not pulverize it. Lately, however, owing to the increased demand, machines have been made to do the work very satisfactorily, and the dealer is able to obtain ground glass, the same as he does emery, pumice stone, and similar abrasives.

There are only one or two firms in the United States in a position to furnish the pure glass in this form, and the use of it is increasing constantly. Many of the paint stores have been handling ground glass under the name of "Diamond Dust," and you have, no doubt, noticed the uneven particles which made the so-called "Diamond Dust" practically useless for any fine work.

Now that it is possible to obtain ground glass evenly graded, there is no reason why the sale should not increase considerably. Glass can be used for joint valves on automobile engines, and a number of other purposes where a hard abrasive is necessary.

On first thought, it would seem that the price of the glass would be very low, considering that junk glass could be used, but in order to turn out a good product, it is necessary that the glass be clean and all of the same quality, for instance, plate glass should not be mixed with broken milk bottles, beer bottles, etc.

It is found that the greatest demand today is for the ground plate and window glass, but as it is much cheaper to grind quartz and similar stone, many are selling quartz, etc., for ground glass, which, for some work, of course, will not stand up.

Taking the glass cullet to begin with, it is not a very difficult matter to grind down the material to a fineness of about thirty mesh, but the difficult process starts at that point, when an effort is made to reduce it to 100 mesh and finer.

The hardest steel will be pitted by the small glass particles, and the conveyors and other machinery for handling it soon becomes worn out. This, in itself, is quite an expense.

The next process is the bolting. In order to get a fine mesh of any material, it is necessary to use silk on the sieves. With ground glass the silk does not last very long, and it needs constant watching and replacing. Therefore, what appears at first to be a simple and cheap process, becomes a rather expensive proposition before the material is finished. In fact, the wear and tear in a glass mill is more than any mill known. Granite and hard rocks are child's play as compared with glass when it comes to grinding.

To prove it, take an insulator off a telegraph pole and try and break it. You will find it harder than any granite obtainable.

HARDWARE LETTER BOX

Built-In Range

H. Occomore Co., Guelph.—Please advise where we can purchase a built-in steel range similar to the old English style of range.

The above are made by Wrought Iron Range Co., Toronto, and Geo. Prowse & Co., Montreal.—Editor.

Bon Ami Oil Stoves

William Lochead, Forest, Ont.—Please give name of distributor in Canada for the Bon Ami oil stove.

The Bon Ami stove is distributed in Canada by McClary Mfg. Co., London, Ont.—Editor.

Diamonds Re-set

The Lougheed Hardware Co., Lougheed, Alta.—Please advice where we can have glass cutting diamonds re-set?

Diamonds can be re-set by Sharratt & Newth, London, England, represented in Canada by A. Ramsay & Son Co., Montreal; A. Shaw & Co., London, England, represented in Canada by Hales Bros., 3 St. Nicholas street, Montreal. —Editor.

Air and Electric Screw Drivers

Beatty Bros., Fergus, Ont.—Please advise where we can secure air and electric screw drivers. Also please give address of the Cordage Trade Journal.

Compressed air and electric screw drivers are made by Independent Pneumatic Tool Co., Chicago Ill.; Cleveland Pneumatic Tool Co., Cleveland, Ohio. The Cordage Trade Journal is located at 81-83 Fulton street, New York.—Editor.

Mendets

The Rogers Hardware Co., Charlottetown, P.E.I.—Please let us known who manufactures Mendets, for mending enamel and tinware.

Mendets are made by Collette Mfg. Co., Collingwood, Ont.—Editor.

Ferrules

R. T. Holman, Ltd., Summerside, P. E.I.—Please furnish us with a list of the manufacturers of hoe, rake and fork ferrules.

Ferrules are made by the following firms:—Flay Bros., London, Eng.; H. Mueller Mfg. Co., Sarnia, Ont.; Williams Bros. & Piggott, Birmingham, Eng.; Canada Axe & Harvest Tool Co., Montreal, Que.—Editor.

Crown Herald and Derby Oak

A. Koenig, Paris. — Kindly advise names of manufacturers of Crown Herald Range and Derby Oak stoves.

Can any of our readers kindly supply the desired information.—Editor.

Burlap

T. Dodds & Son., Watford, Ont. — Please supply names of manufacturers of burlap for interior decorating.

Burlap is manufactured by Dominion Oilcloth Co., Montreal, and the Cott-a-Lap Co., Walkerville, Ont.—Editor.

Flat Springs

The Kyle Malleable Castings Co., Merrickville, Ont.—We desire to purchase some flat springs. Please give names of manufacturers. Springs are made by Steel Co., of Canada, Ltd., Hamilton; St. Lawrence Steel & Wire Co., Gananoque, Ont.; B. J. Coghlen Co., Montreal, Que.; Cleveland Wire Spring Co., Cleveland, Ohio; Union Spring & Mfg. Co., Pittsburg, Pa.; Cary Spring Works, 240 W. 29th street, New York; National Mfg. Co., Worcester, Mass.; Wm. D. Gibson Co., 27 Huron street, Chicago, Ill.—Editor.

George E. Smith & Co., Halifax,—Will you be good enough to tell us in the columns of your paper the names of some firms in Canada who make a specialty of manufacturing or dealing in cabinets and furnishings for hardware stores?

Cameron & Campbell, Toronto; Walker Bin & Store Fixture Co., Berlin, Ont.; Dennis Wire & Iron Works Co., London.—Editor.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

176. **Tinned wire for weaving spring mattresses.**—A Glasgow house wishes quotations in gauges from 21½ to 23, and made up in coils.

177. **Asbestos cement building sheets and roofing shingles.**—A Glasgow firm would like to have direct quotations from manufacturers.

178. **Trinidad asphalt felt roofings.**—A firm in Glasgow is open to receive direct quotations from Canadian firms.

179. **Cotton duck and cheap belting duck.** —A Stirling firm wishes quotations for the above: Cotton duck, 52 inches 10 ounces, 12 ounces, 14 ounces, 16 ounces, 18 ounces, 20 ounces, 22 ounces. Cheap belting duck, 42 inches and 45 inches (basis 42 inches 32 ounces and 42 inches 30 ounces).

180. **Asbestos cloth.**—A Scotch house desires to hear from Canadian exporters of asbestos cloth, metallic and non-metallic.

181. **Wire, wiped and soft galvanized.**—A firm in Stirling is open to purchase from Canada.

182. **Oxide of zinc.**—A Scotch rubber company asks to hear from Canadian exporters.

183. **Barytes.**—A Stirling firm would like to receive quotations.

185. **French chalk.**—Some importers in Stirling would like to receive quotations from Canada.

186. **Red oxide of lead.**—A Stirling house wishes to correspond with interested Canadian exporters.

187. **Litharge.**—A Scotch firm asks for quotations.

188. **Antimony.**—A Stirling house desires to hear from Canadian exporters of antimony: Crimson and golden 15 to 17 per cent. free sulphur. Crimson without free sulphur.

190. **Leather belting and compressed asbestos jointing.**—A London house desires prices.

191. **Steel products.**—A Glasgow firm wishes to receive quotations for mild steel billets, blooms, slabs and sheet bars, mild steel round bars, etc., Siemens-Martin wire rods, Siemens-Martin soft drawn wire, bolts and nuts, rails and kindred products.

195. **Screw nails, wire nails in kegs (also made up in packets in cases), mild steel hoops, small sizes iron.**—A large Glasgow importing house will be pleased to receive quotations on the above.

198. **Asbestos yarn.**—A firm in Glasgow wishes to receive prices for two tons of asbestos yarn, without cotton, c.i.f. Glasgow. Sample may be inspected at Department of Trade and Commerce, Ottawa.

200. **Rubber goods of all classes, asbestos goods, electrical goods for insulating purposes.**—A Glasgow firm, large importers from the United States, is desirous of obtaining quotations from responsible Canadian firms.

203. **Mild steel.**—A Glasgow firm wishes to receive quotations c.i.f. Glasgow on mild steel butt welded tubes 1¼-inch o/d by 10 W.G. thick in lengths 13 feet, 13 feet 6 inches, and 14 feet, cut to dead lengths: also mild steel sheets from 13 to 17 W.G. to length and width which will be given, and mild steel bars 1 inch by 3/16 inch; 1 inch by ¼ inch; 1½ inch by ¼ inch; 1½ inch by 5/16 inch; 1½ inch by ⅜ inch; and 2 inches by ⅜ inch, also 15/16 diameter.

204. **Mild steel sheet bars or billets.**—A Glasgow firm wishes to receive quotations c.i.f. for the above, 8 inches, 10 inches and 12 inches wide by 11 pounds to 50 pounds per lineal foot from 15 feet to 16 feet long. Are open to negotiate business to the extent of 1,000 tons weekly.

206. **Galvanized iron.**—A Scotch firm asks to receive quotations from Canadian exporters.

207. **Steel wire.**—A Renfrew firm desires to hear from Canadian exporters of steel wire.

208. **Manufactured asbestos.** — A Scotch house wishes to hear from Canadian firms desiring to export.

209. **Agency for iron and steel.**—A Glasgow firm formerly representing German exporting houses, wishes to obtain the agency of a Canadian iron and steel manufacturer with a view to future business. Territory: Scotland and the North of England. Best references.

210. **Asphalt roofing and asbestos cement sheets.** — A South African manufacturers' agent, who will be in London until March 18, wishes to secure the representation for the Cape Colony of Canadian manufacturers of asphalt roofing (upon the lines of rubberoid), and also of asbestos cement sheets. Samples of roofing are in the possession of the Department of Trade and Commerce. (Refer File A-1737.)

211. **Toys, novelties and electrical fittings.** —A London firm of manufacturers' representatives wishes to obtain, either upon a commission basis or to purchase outright, Canadian small toys (metal and wood), novelties and electrical fittings.

212. **Lawn mowers.**—A Durban firm of importers asks for catalogues and prices f.o.b. Montreal or St. John, on Canadian-made lawn mowers.

213. **Slates.**—A Durban firm makes inquiry for possible supply of school slates from Canada.

EVENTS IN THE TRADE

Fire Losses

Gleichen, Alta. — Fire destroyed Bray's hardware and furniture store.

Hardwaremen Enlist

Hamilton, Ont.—George Howieson, of Wood, Vallance & Co., has enlisted with the 173rd Battalion.

Died at the Front

Medicine Hat, Alta.—Word has been received of the death while on active service in France, of Lance Corporal James J. Morrison, who prior to enlisting was bookkeeper for the Marshall-Mitchell Hardware Co.

New Firm

Kamsack, Sask. — The Kamsack Plumbing & Heating Co., has started in business here. J. G. Hallson, of Hallson's Hardware, is connected with the new firm.

Winnipegers Enlist

Winnipeg, Man.—J. B. Ellis and R. T. Mitchell of the Winnipeg Paint & Glass Co., have enlisted for actice service; also W. Harrison, of the Martin-Senour Co. M. Richmond, of Beatty Bros. staff has enlisted for active service.

Join Beatty Bros. Sales Force

The following have recently joined the sales force of Beatty Bros., Fergus, Ont.: Geo. McQuiggan, Aylmer, Ont.; A. F. McDonald, North Lancaster, Ont.; R. H. Brown, Ottawa; E. H. Brown, St. Louis de Gonzaue, Que.; D. W. Tait, Sussex, N.B.; Albert Orton Barne, Ont.

Move to Berlin

Berlin, Ont.—Doon Twines, Ltd., Doon, Ont., have closed negotiations for the purchase of the new plant erected last year by the Regal Auto Company. The Doon Company will take possession of a portion of the building almost immediately. The plant in Doon will be closed down owing to the difficulty experienced in securing necessary help.

Personal

R. S. Nelson, for the past year with Rice, Lewis & Son, Toronto, has moved to Orillia to take a position in Parson's new hardware store.

Fred S. Bailey, who for a number of years has been selling ready roofing has joined the sales staff of the McFarlane Ladder Works, Toronto, and will cover Western, Ontario.

J. McCormick, for the past nine years connected with the sales department of Mussens Ltd., Montreal, has resigned to take a similar position in the machine tool department of the Canadian Fairbanks-Morse Co., of Montreal.

F. W. Evans has been appointed manager of the Toronto sales branch of the Canadian Fairbank-Morse Co., on Front street. Mr. Evans was until recently in charge of the machine tool department at Toronto and previously to that held a similar position at the head office in Montreal, moving to Toronto, when this department was moved to that city.

Business Changes

Vancouver, B.C.—Patterson & Goldie have dissolved, J. Patterson retiring.

Edmonton, Alta.—The Ross Harlware has removed from here to Dowd, Sask.

Vancouver, B.C.—The B.C. Hardware Co. has dissolved partnership, J. L. Jenks retiring.

Balmoral, Man.—McLaren & Barbour hardware, has been dissolved, J. L. Barbour continuing.

Blyth, Ont.—L. J. Williams has purchased the hardware business of L. O. Charlesworth.

Durham, Ont.—Wm. Black, for many years in the hardware business here, has disposed of his busines to Shirley McIntyre.

Alvinston, Ont. — J. E. Hussey, of Hussey & Kindle's hardware has disposed of his interests to Gordon Chambers.

Lethbridge, Alta.—The partnership of Hart, Patterson Co. has been dissolved. Mr. Patterson retires from the business on account of ill health. Mr. Hart will carry on the business at their new location 418 13th street.

To Build Plant in Hamilton

Hamilton, Ont. — The Stanley Steel Company, with headquarters in this city has been granted a federal charter with a capital of $2,500,000, and it has been announced by Lieut-Col. A. F. Hatch, who will be the vice-president and treasurer of the company, that a large plant will be erected as soon as the frost is out of the ground. Plans for the building will be prepared at once. It will be erected on a site close to the premises of the Canada Steel Goods Company, of which Mr. Hatch is president. E. A. Moore, vice-president of the Stanley Works, of New Britain, Conn., will be the president of the company. The Stanley Company has extensive steel interests in many parts of the State. The Canadian company will be an entirely separate concern. The incorporators of the company are Lieut.-Col. Hatch and his son, Frederick Hatch and T. C. Haskett, K.C.

Appointed Manager Ontario

S. W. Smith has been appointed manager of the Ontario division of Brandram-Henderson, Ltd., and the Pinchin-Johnson Co., of Canada, with headquarters at Toronto. Mr. Smith, who succeeds E. F. Lowe, was formerly manager of the Maritime division, and was located at Halifax, N.S. Mr. Smith has also been in charge of the export department. Mr. Lowe, the former manager, has moved to Detroit, Mich., to go into the automobile supply business.

Australian Buyer in Canada

H. B. Lee, of Messrs. E. L. Yencken & Co., Proprietary, Limited, prominent paint, oil and wallpaper, warehousemen of Melbourne, Australia, is due to arrive in Toronto in the near future. He will make this city his headquarters for a brief period when calling upon Canadian manufacturers supplying such goods as his firm requires. The lines in which his firm are interested are wallpaper, paint brushes, brushware, picture mouldings, gold leaf or foil, paints, glass, etc. He was due to arrive in Vancouver on March 9 by the steamer Niagara. His itinerary included Chicago and Pittsburg, before arriving in Toronto. Letters addressed to Mr. Lee in care of the Canadian Manufacturers' Association, Traders' Bank Building, Toronto, wil reach him on his arrival.

Incorporations

Frost Steel & Wire Co., capitalized at $6,000,000, head office Hamilton, Ont., to manufacture and deal in iron, steel and all other metals from the ore to the finished products.

The Dominion Dustless Sweepers, Ltd., has been incorporated at Ottawa, with a capital of $200,000 to manufacture street cleaning machinery, at Peterborough, Ont.

The Canadian Germicide Co., has been incorporated at Ottawa with a capital of $40,000 to manufacture germicides, disinfectants, antiseptics, etc. Head office to be situated at Toronto, Ont.

HIGH MILITARY HONOR

In the confirmation of the nomination of Lt.-Col. Robert Starke, Montreal, as brigadier commanding the 12th Infantry Brigade, a prominent figure in the Canadian wholesale hardware trade has been elevated to a high military honor, and one which has been earned by a lengthy and faithful service—a service which commenced thirty years ago as a private. Lt.-Col. Starke, who succeeds Brigadier General A. E. Labelle on the completion of the latter's term this month, has for a number of years been a member of Starke-Seybold, Limited. He will assume his new command immediately; the brigade is made up of four Montreal regiments.

Although comparatively a young man, Lt.-Col. Starke is one of the most experienced and most respected soldiers of the garrison, and wears both the Long Service Medal anl the Officers' Decoration for Long Service. Donning the uniform of the Crown as a private of the Third Victoria Rifles, he served in the ranks for some time before taking a commission as a lieutenant and then worked up until he won the title of officer commanding. After going to the reserve of officers he felt the call of duty with the outbreak of the war and returned to military work in order to do his bit in preparing men for overseas service. His work with the McGill C. O. T. C. during the war period has won the high commendation of both Field Marshall H.R.H. the Duke of Connaught and Brigadier General Wilson, who formerly commanded the brigade from which General Labelle is now retiring. Milestones in this career are: 1886, joined Victoria Rifles as a private; 1896, commissioned as lieutenant; 1907, made commanding officer with rank of Lt.-Col. after holding rank as captain and major; 1912, gazetted brigade-major of the 12th Brigade (although on the reserve); 1914, made commander of the McGill C. O. T. C. In 1905 he was elected president of the old Montreal Military Institute.

Although at the time he entered the ranks of the Victoria Rifles the youthful soldier was just able to get by, his experience in the hardware trade goes back even further, for it was about 1882, when he became connected with the old firm of Benny MacPherson & Co. Later he was for a period of nine years with the Peck Rolling mills, where he gained valuable insight as to the manufacturing end of the hardware business. Next he became associated with the wholesale firm of Howden, Starke & Co., a company with which his brother was then connected. Later through reorganization this concern became what is now known as Starke-Seybold, Limited.

Twenty Years Ago

In the Hardware Trade

The following items have been taken from the issue of Hardware and Metal of March 14, 1896:

A. B. Wiswell has been admitted a partner in the firm of A. M. Bell & Co., Halifax, N.S.

Editor's Note.—A. B. Wiswell is now president A. M. Bell & Co., wholesale and retail hardware, Halifax, N. S.

* * *

Hockey teams from the establishments of Frothingham & Workman and Caverhill-Learmont & Co. met on Crystal ice on Tuesday evening to decide the championship, which has for some years been held by Caverhill-Learmont & Co. There has been a long standing rivalry between the two teams, and a keen, hard match resulted. When time was called at the end the score stood 3-0 in favor of Frothingham & Workman, who thus won the championship, and incidentally administered a coat of whitewash to their opponents. The line-up of the players and officers was as follows:

Lt.-Col. Robert Starke, Montreal, who will succeed Brigadier General A. E. Labelle in command of 12th Infanty Brigade.

Frothingham & Workman		Caverhill-Learmont
G. C. Morris	goal	F. Newman
T. Wall	point	G. McGowan
G. C. Davis	cover	J. Davidson
E. W. Monk		Geo. Jordan
A. E. Warren	Forwards	J. E. Botterel
A. E. Carmichael		A. Bain
L. J. McMahon		F. Cockburn

Referee—W. Barlow.
Umpires—M. J. Polan and W. Ainslee.

Editor's Note:

In turning back the clock for twenty years Hardware and Metal found that those of the participants in this hockey duel of years ago who were approached for information had a very vivid recollection of many of the features of the event—some of which (such as the score) had naturally impressed one aggregation more than the other. Also the mention of the names of friend and foe of that strenuous hour revived many memories.

The names of the two umpires were recalled with regret for they have since departed this arena of the greatest of all games. Let us hope that any animosity which may have been felt towards these officials in the heat of combat has long since been forgotten—we know it has.

As to the game itself there is a unanimous recollection of the fact that there were two or three inches of water on the ice—preferably three. The outcome, according to the evidence, which we feel predominately was in favor of the Frothingham crew over that of the craft of Caverhill, but, even so, the latter claim that "if we did lose that game it was about the only one we did in many years." Further report even now echoes out of the years that there was more than glory at stake on the victory, and that there were higher powers than the participants concerned with the outcome; even now it is recalled that this was incentive to additional effort because "higher powers" do not sometimes see the humor of defeat when having something "on" the game.

Of the participants it would be impossible to trace their various careers, but these are indicated to some extent in their present occupations:

Frothingham & Workman Team

Geo. C. Morris is an insurance adjuster, St. James Street, Montreal. He is at present very active in military matters as an officer of militia.

T. Wall is manager for Montreal of the A. G. Spaulding Company, being more concernod now with the selling of sporting equipment than the using of it.

G. C. Davis is the managing director of Frothingham & Workman, Limited, having worked to a high position with the firm he represented in the game.

E. W. Monk is sales manager of the Canadian Express Company at Montreal.

A. E. Warren is another who stayed with the old firm and is now one of the buyers.

A. E. Carmichael felt the call of the West and is in business at Hanbury, Sask.

L. J. McMahon, who later became an athlete of considerable reputation, is now secretary to the manager of the Bell Telephone Company at Montreal.

Caverhill, Learmont Team

F. Newman, who prior to enlisting was associated with the Canadian Fairbanks-Morse Co., has joined for active service, with a commission as major of the 53rd at Toronto.

G. McGowan is still with Caverhill, Learmont & Co., having charge of the consignment of orders of general hardware.

J. Davidson is now the comptroller at the Windsor Hotel, Montreal.

Geo. Jordan is still in Montreal being identified with Tooke Brothers.

J. E. Botterel went west and is to-day a partner in the firm of Baird & Botterel, engaged in the grain business at Winnipeg.

A. Bain is another who continued to follow the hardware business with marked success, now being manager at Vancouver for the wholesale firm of E. G. Prior & Co., Limited.

F. Cockburn, who must have been youthful in those days—for he still is, or seems to be—is still connected with the firm, having charge of the pricing of the general hardware lines.

The Officials

W. Barlow, who acted as referee, was for many years prominent in hockey circles in Montreal, and was a member of the championship team of the M.A.A.A.

M. J. Polan and W. Ainslee, the umpires, as stated, are both deceased. The former was connected with Frothingham & Workman, Limited, and for a time played championship lacrosse, being captain of the Shamrocks for a period. The latter was employed by Caverhill, Learmont & Co.

* * *

W. H. Evans, of the Canada Paint Co., Toronto, has been elected a member of the Toronto Athletic Association. Mr. Evans is a firm believer, evidently, in the Latin motto: Mens sana in corpore sano (A sound mind in a sound body.)

Editor's Note.—Wm. H. Evans is now a resident of Montreal, where he conducts a manufacturers' agency.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Another heavy list of price changes has been issued. The changes are of far-reaching importance to the trade. Although prices on many lines of iron and steel products are abnormally high at present, there are evidences of further advances which in all probability will go into effect in the near future. Wholesalers report that country trade is brisk. City trade has been temporarily halted by the recent cold weather and heavy snow falls. The outlook for spring is bright, but there will undoubtedly be shortages of many hardware lines. Lead continues as the feature of the metal markets and is now quoted over 7c at New York and St. Louis. The high price of pig lead has affected the price of many manufactured products. Among the many lines which have advanced during the week are: Flat and round head bright wood screws, wire staples, roofing, building paper, rifles and shot guns, emery and sand paper, shot, farm bells, curtain rings, snare wire, anchors, shoe thread, gun and rifle covers, hand saws, taps and dies, tin, lead, plate and sheet glass, axes, hatchets, bar iron, refined and horseshoe iron, domestic, tire and toe chalk steel, lead pipe, lead sheets, pipe fittings, cut nails, arsenate of lead, turpentine. A new list has been issued of extras for galvanizing nails. A new list has been issued on ship augers. New lists have been issued for small sizes of auger and car bits. A number of further price changes are predicted in the reports which follow. Readers will note that many of the price changes announced this week have been predicted by HARDWARE AND METAL for some time past, and they will not come as a surprise to those who have been following the market reports. It is utterly impossible to enumerate, in the space devoted to markets at a glance, a complete summary of the many important price changes and features of the week. Readers are therefore advised to read closely all the market reports which follow. The hardware markets are to-day in a condition such as has never existed before and the only way to keep posted is by closely following the weekly market reports.

MONTREAL

MONTREAL, March 15.—The comparative lull noted in the hardware trade during the first days of the month has been succeeded by activity quite equal to the good showing which has been made since the first of the year. This applies to general staples for country points in heavy hardware and in the city trade there is less activity. Very cold and unseasonable weather may be responsible to some extent for the quiet sentiment in the city but outside the effect is not noticeable and such warm weather lines as lawn tools are beginning to move in fair volume. Deliveries of general shelf goods are very good for the season but shipments of heavy hardware will be somewhat restricted until the first of April ; from that date there will be a very heavy movement throughout the greater portion of the month the first rush being revived as usual with the opening of navigation about the 15th of the month.

Reference to the price situation is only a repitition of what has been said regarding the continually advancing advance of prices in practically every branch of the trade. This week there are further increases in many lines of manufactured iron and steel and large number of the more highly manufactured products handled by the trade. Also it is noted that there is a more than usually large number of miscellaneous items to which detailed reference cannot be made. Particularly in the heavy goods, predictions are being made of further increases from time to time until the situation clears itself—and when the, clearing will commence cannot yet be forecast.

Although lead is the feature of the metal markets and promises to create new high records in the near future, the fact that tin is 5 cents higher in New York than it is in Montreal is perhaps more interesting. This is explained in that tin is about the only metal which the United States imports in large amount and under war restrictions (which do not apply to Canada) shipments are only made from London under special permits. For this reason Montreal follows London on tin, whereas on all other metals New York is a direct factor in the local quotations.

Advances are recorded this week on : bar iron, refined and horse shoe iron and mild, band, sleigh shoe, domestic, tire and toe calk steel; lead pipe, lead sheets, pipe fittings, nails (wire, cut and roofing), galvanized, plain steel, hay, stove pipe and other wire, staples, screws, axes, hatchets, augers, shot, roofing materials, farm bells, sand and emery papers, curtain rings, snare wire, anchors, axle washers, shoe thread, gun and rifle covers, Butterfield goods, Disston's saws, etc.

Tin Higher and Firm.—There has been an advance of half a cent for tin during the week and the market is firm on the increase. In the same period New York has advanced 7 cents and is now 5 cents higher than Montreal. The explanation of this seemingly extraordinary situation is that at the present time tin is the one metal on which Montreal follows London rather than New York. The reason is that the United States has to import its tin and that there are restrictions agains shipments from London to that country which do not apply to Canada. On other metals which the United States produces New York is the dominant market on his side of the water. The American situation appears to be due to a shortage of spot supplies following a period in which receipts have been small. Montreal quotation : 49½c.-50c. continued firm.

Copper Remains Steady.—There has been practically no change in the market situation as regards copper during the week, and the advances which were scored on the sensational upward movement of some weeks ago are still maintained. The American situation indicates dullness, with consumers well covered, and a tendency to cut quotations to some extent. The American production of the metal continues on a record-breaking basis. Montreal quotation : 32c.-32½c. steady.

Lead Scores Big Gain.—The lead market continues to be the feature of local situation in metals and the price has been up 1½c. since last report. The indications are that still higher quotations may be expected. The market is following New York closely. The American Trust quotation has been marked up to a basis of 6.6c., but this is no indication of the spot situation. Quotations for ready delivery in New York are now 7c. to 7¼c.

or about the same level as reached at the peak of the 1915 movement when the Trust went to 7 cents. The amount of lead available between now and the end of April is reported to be so small that if the demand continues new high records are likely to be established. Montreal quotation : 10¾c.-11c. strong.

Spelter is Easier.—The situation in spelter continues somewhat easier, with the result that the quotation has been marked down 1 cent locally. Montreal is acting in sympathy with New York and London and the latter has recently reported substantial declines. This followed the threat of the British government to stop trading in metals in England. Spelter is the only metal to be adversely affected. Conditions are so unsettled that many American producers are not naming any prices at all and are waiting for the market to establish itself. An explanation of the violent decline in London is being awaited. Montreal quotation : 23c.-23½c. unsettled.

Other Metals.—The markets for antimony and aluminum show no change since last report although in each case the American prices show slight declines. Antimony is still quoted at 48 cents and aluminum is nominal at about 68 cents. Sheet zinc is somewhat easier but as yet there have been no changes in quotations: casks 31 cents and part casks 31½ cents.

Solder is Strong.—With the continued strength in the tin situation, solder is strong on the recent advances, and still higher prices are to be looked for. While there is a wide range in prices as between different qualities the general situation is indicated by the following quotations : Commerical half-and-half 29c.-30c.; Strictly half-and-half 31c.-32c.

Iron and Steel Situation.—A description of the situation in the iron and steel markets is simply a repetition of what has been said for many weeks ; there is a still increasing difficulty with regard to getting supplies. Future deliveries are being deferred further and further when booked at all and deliveries from stock are steadily advancing with the exhaustion of available supplies. Under these conditions there are further advances for several lines of manufactured steel and iron and further changes in an upward diection are being contemplated.

Iron and Steel Advances.—Following the prediction of last week that there would be an advance on bar iron in sympathy with the American situation, the price has been marked up 20 cents. At the same time there have been increases on refined and horseshoe iron and mild, band, sleigh shoe, domestic, tire and the toe calk steel. New quotations follow : Common bar, per 100lbs, $2.65. Refined iron, per 100 lbs. $2.90. Horseshoe iron, per 100 lbs. $2.90. Mild steel $3.05. Band steel $3.05. Sleigh shoe steel $3.05 Domestic $3.05. Tire steel $3.15. Toe calk steel $3.95..

Pipe and Tubes.—The general advances on black and galvanized wrought iron pipe referred to last week have gone into effect and the market is firm at the higher level. There have been still further advances on tubular goods in the United States and for this reason a further marking up of pipe would not be a matter for surprise while boiler tubes may be expected to go up in the near future.

Boiler Plates.—Although there is no general change made in the quotations for boiler tubes this week, advances may be expected before next report. It is pointed out that at the present time deliveries from stock at New York are on a higher basis than has been quoted to the trade here. This is a typical example of the recent developments in the market for manufactured iron and steel.

Sheets are Firm.—There are no changes this week in the quotations for black or galvanized sheets or Canada plates, but the market is very firm and dealers can see nothing but higher prices unless there is some change in the manufacturing situation which cannot at present be forseen.

Lead Pipe up Again.—Following the advance of 1 cent per pound on lead pipe last week, the effect of the advancing market for pig lead has been such that another increase of 1 cent has been made. The quotations now are : $12.50 for lead pipe and $13.50 for lead waste pipe.

NEW DISCOUNTS ON SCREWS

The advance on wood screws predicted in Hardware and Metal last week has gone into effect and the discounts now being quoted are as follows:

Flat head bright, 80 and 10 p.c. off list.
Oval head bright, 75 and 10 p.c. off list.
Round head bright, 75 and 10 p.c. off list.
Flat head brass, 50 p.c. off list.
Oval head brass, 47½ p.c. off list.
Round head, brass, 47½ p.c. off list.
Flat head bronze, 40 p.c. off list.
Oval head bronze, 37½ p.c. off list.
Round head bronze, 37½ p.c. off list.

F.O.B. Hamilton, Toronto and Montreal, with freight equalized thereon.
Terms: 2 p.c. cash 30 days.
Orders will only be accepted with specifications and for prompt shipment, and these discounts are subject to change without notice.

Lead Sheets go up.—With the rising lead market there has been an advance all round on lead sheets. So far the prices have been marked up 1 cent but this does not cover the advance in the cost of raw material and for this reason further increases are to be expected. New quotations are as follows : Lead Wool, 13c. lb.; Sheets, 3 lbs. sq. ft. $12.00; Sheets, 3½ lbs. sq. ft. $11.30; Sheets, 4 to 6 lbs. sq. ft. $11.75; Cut sheets, ½c. per lb. extra; cut sheets to size, 1c. per lb. extra.

Pipe Fittings up Again.—General advances have been made on iron pipe fittings. The new discounts are as follows : Canadian malleable 27½ per cent; bushing 60 and 10 per cent.; flanged unions 60 and 5 per cent.; malleable bushings 60 and 10 per cent.; nipples 72½ per cent.; malleable lipped unions 62½ per cent.; plugs 60 and 10 per cent.

Nails Much Higher.—The 25c. advance on wire nails referred to last week has gone into effect here, the present quotation being $3.45. At the same time there has been another advance on cut nails to a basis of $3.20. Still another advance in nails affects galvanized roofing nails which are up $1.15, to $10.15. All these changes come as the result of the increased cost of raw material.

Galvanized Wire.—Folowing the wire advances briefly recorded last week there has been a change in the quotations for galvanized wire. The new figures for galvanized and other fence wires are now as follows : No. 9, coil spring $4.30; No. 9, plain galv. $4.25; No. 12, plain glav. $4.40; No. 13, plain galv. $4.50; O. & A., No. 10 $3.76; O. & A., No. 11, $3.82; O. & A., No. 12 $3.90.

Other Wire Advances.—Practically all varieties of steel wire were affected by the changes of a week ago to which reference has been made. The base for No. 0-9 gauge smooth steel wire is now $3.50 with the usual extras.

Hay wire : No. 13. $3.50; No. 14. $3.55 and No. 15. $3.65.

Cut Hay baling wire : No. 9, $3.90; No. 10, $3.95; No. 11, $4.05; No. 12 and 13, $4.15; No. 13½, $4.25; No. 14, $4.40 and No. 15, $2.65. Advance on this basis 2½ per cent

Wire bale ties : No. 12, $3.90; No. 13, $4.00; No. 13, $4.05; No. 14, $4.15; No. 15, $4.30; No. 16, $4.55.

Stove Pipe Wire : No. 18, $4.75 and No. 19, $5.00.

Fence Staples Affected.—Fence staples were affected by the movement in wire. Galvanized in kegs now quoted $4.65 and bright $3.80 with the usual addition of 25c. for 25 lb. boxes.

New Screw Discounts.—As has been predicted in these reports there have been further advances on screws the bright and bronze, both flat and round head being affected. New discounts are as follows : Wood, F. H., bright 80—10; Wood, R. H., bright 75—10; Wood, F. H., bronze 40; Wood R. H., bronze 37½.

Iron Bench Screws up.—Iron bench screws are affected by this last advance in screws. New quotations are : 1 inch, $4.75; 1⅛ inch, $5.75 and 1¼ inch, $7.35.

Many Hardware Lines Affected.—There have been a great many changes in general hardware lines during the week and in all cases adjustments have been to higher levels. One feature of the readjustments was the number of miscellaneous items affected. These are looked upon in the trade as odds and ends and as such a detailed description is practically impossible, as in many cases perhaps only a couple of numbers out of a total of a dozen or so are altered.

Axes Are Higher.—Announcement is made by several wholesalers that there has been advance on practically all lines and brands of axes as the result of the rising cost of raw material. In a general way this may be described as from 50 cents to $1.00 per dozen.

Hatchets Also.—Hatchets are also effected by the increase in the price of

axes referred to and for the same reason.

Augurs.—In connection with the advance on augur bits referred to last week, which was represented as being about 10 per cent. one wholesale firm reports that only Numbers 3, 4, 5, 6, 7 and 8 are affected, the change being about $1.00 per dozen on the list prices with the same discounts prevailing.

Shot up Again.—Although it is only a couple of weeks since there was a material advance in the price of shot the rising cost of lead has been so rapid that another increase has now been made, the new Montreal quotation being $13.13 net.

Roofing Materials.—Following the advance on certain roofing materials referred to last week there have been still further increases announced by the manufacturers. Tarred felt, ready roofing, carpet felt and tarred sheathing are affected. New quotations are as follows: Tarred sheathing, No. 1, 66c.; 2-ply Ready Roofing, $1.05; 3-ply Ready Roofing, $1.30; Carpet felt, $3.50; Tarred felt $3.25.

There are also proportionate advances on the different brands handled by wholesale firms. One firm quotes No. 1, $1.20; No. 2, $1.45 and No. 3, $1.75.

Farm Bells Again.—A second advance within a few weeks has been made on farm bells. The latest quotations are: C x 40 lbs., $2.75; B x 50 lbs., $3.25 and A x 75 lbs., $4.50.

Sand and Emery Papers.—As forecast last week, there have been new list prices issued for sand and emery papers including the B & A, U. S. and Imperial brands. The discounts remain as before: B & A, 40 per cent.; U. S. 45 and 5 per cent. and Imperial 45 per cent. The new prices will be found in a special panel.

Brass Curtain Rings.—New list prices have been announced for brass curtain rings as follows: No's. 508-19c.: 209-22c.; 510-25c.; 511-30c.; 512-34c.; 513-39c.; 514-49c.; 515-57c.; 516-60c.; 517-64c.; 518-70c.; 522-$1.05; 524-$1.35; 526-$1.65; 528-$2.40.

Oil Cloth Binding.—There has been a considerable advance made on oil cloth binding. This is another of the effects of the rising cost of tin and other metals.

Brass Snare Wire.—Another advance on brass snare wire has been recently made. The new quotations are: No. 18, 61c.; No. 20, 62c. and No. 22, 64c. The latter is the size most generally used.

Miscellaneous Items.—Some of the many miscellaneous items affected this wek include anchors, axle washers, cross cut saws, shoe thread (up 15 per cent), etc.

Important Brands Up.—A general advance is announced by one local wholesale house on a line of stocks, dies, tap reamers, etc. This same firm states that another advance on Stillson wrenches and parts is to be expected in the near future. Another wholesaler advises that one line of saws has been advanced 5 per cent. this being the second increase in the past few months.

Gun and Rifle Covers.—There has been a general readjustment of prices on gun and rifle covers. For solid leather there is an advance of as much as 20 per cent. on some lines; for the half leather and half canvass the increase is less and for the plain canvass the changes are not very important.

Seasonable Lines.—Although very cold and unseasonable weather has to some extent interferred with the movement of seasonable lines in the city, the country districts do not seem to have been influenced. Already there is a demand for lawn equipment, including hose, sprinklers, couplings, etc.

TORONTO

TORONTO, Ont., March 16.—The favorable conditions in the hardware market, reported last week, have been maintained, and business is moving out in good volume to the country, but the city trade is not so active. The situation generally is unchanged, and the steady advance in prices continues to be the main feature. The difficulty and delay in obtaining raw materials is causing considerable anxiety to manufacturers, and threatens to curtail production, and thereby making deliveries to wholesalers very uncertain. Congestion of freight on the railways is also affecting the situation and causing considerable delay to shipments. There is no improvement in the situation as regards to ocean freight rates, and it is feared that the shortage of tonnage will become more serious than at present.

The new schedule on binder twine may be expected towards the end of the month. There may be some delay in giving out the new prices owing to the unsettled conditions in the market, due to the big increase in the cost of raw materials. The cordage market is very firm, but prices are unchanged, although the situation is very unsettled owing to the continued advance in the cost of raw materials. A good demand for oil stoves is reported and shelf goods are moving out in good volume. Bookings for summer lines continues satisfactory, and the outlook is good for the coming season's trade. The building trade is quiet, and there is not much of a demand for builders' supplies.

Important Price Changes.—There is no abatement in the upward trend in prices, and indications still point to higher levels. The steady increase in the prices of iron and steel is one of the principal causes of this abnormal situation, which is becoming more acute as time passes. There is no relief in sight, and present conditions will no doubt continue for the greater part of the year. The price changes announced this week are all upward, and include wood screws, fence wire, hardware tacks, nails and capped goods, lead pipe, lead sheets, cow ties and stall fixtures, builders' hardware, blind and bed staples, carpet tacks, shot, pipe fittings, sheet and plate glass. A new shoefinders' list has been issued. Manufacturers of scissors and trimmers have advanced prices 10 per cent. Manufacturers in the United States have advised the trade of another advance of 10 per cent. in builders' hardware, and Canadian manufacturers will no doubt advance their prices an equivalent amount in due course. Makers of ready roofing and roofing paper have advanced their prices. This was predicted in these columns last week, and is due to the increase in cost and scarcity of raw materials, particularly rags.

Steel Market Active.—The mills continue to receive orders for steel in large volume and deliveries are getting more behind than ever. The situation is becoming serious, as the steel companies anticipate some difficulty in filling orders for all the steel required for munition and other purposes. An enormous quantity of shells will be turned out this year, which will require a large tonnage of steel. In addition to this, there is a very large and profitable export business to take care of. The Canadian Steel Foundries have resumed operations out at the Welland plant with their 12-in. rolling mill, and the 22-in. mill will be running shortly. The market continues very strong, and the prices have an upward tendency. Boiler tubes are unchanged, but the mills report a heavy demand for locomotive and merchant tubes. Prices of shafting have advanced $5 a ton in the States, but are unchanged locally. The new demand for shafting is reported to be heavy, and none of the makers have any to sell for delivery inside of six or eight months. Boiler and tank plates are unchanged, but higher prices are anticipated. Iron and steel bars are firm at $2.75 per 100 lbs. base.

The tremendous pressure on the mills in the United States continues, and, despite the heaviest outputs recorded, they are getting further behind on deliveries. The U .S. Steel Corporation on February 29 had unfilled orders on its books amounting to 8,568,966 tons compared with 7,922,767 tons on January 31. Steel bars are unchanged at 2.50c, iron bars 2.35c, plates 2.75c, and shapes 2.25c Pittsburgh. Billets have advanced, due to the shortage of supply, and are quoted as follows at Pittsburgh: Bessemer and open-hearth billets $40, and forging billets $60 per ton. Wire rods have advanced $5, and are now quoted at $55 per ton Pittsburgh. Mills delivering rods to Canada have to declare their market value, which has lately been $50, but this will probably soon be raised to $55. Deliveries on wire rods are very backward, running into the second half. Chicago warehouse prices are unchanged but firm.

Pig Iron Situation.—Quotations are unchanged, and the situation in the market much the same as last week. As the steel companies make their own pig iron, the market has not been affected much by the heavy demand for steel. A revival in the foundry business would have a greater effect on the pig iron market. The total production of pig iron in Canadian blast furnaces in 1915 was 913,719 short tons, valued at approximately $11,592,819. The production in 1914 was 783,164 tons, and valued at about $10,002,856. A large proportion of the production in 1915 was used on the manufacture of steel for munition purposes. The production this year will no

doubt exceed last year's tonnage, as the steel mills are more active this year owing to a greatly increased demand for steel products.

Old Materials.—The market is weaker and depressed with quotations practically unchanged. The ordinary business is very quiet, the demand being almost entirely in connection with munitions. Heavy melting steel is quiet, but in good demand, but the embargo on the export of wrought iron and steel scrap is depressing this market. Copper and lead are firm, particularly the latter, although there has been no change in quotations. Aluminum is very scarce, and prices are firm.

Machine Tools.—The market has been more active this week, and quite a number of inquiries have been received by local machinery houses for tools for 4.5 in. and 6 in shells. Orders keep coming along for single tools for shell plants, and there will no doubt be steady business of this nature throughout the year. Representatives of the Gray-Dort Motor Co. have been in town buying equipment for their new plant at Chatham, Ont. It is reported that the Canadian Hoskins Co., of Walkerville, Ont., are in the market for various kinds of wire drawing machinery.

Metal Situation.—The chief item of importance this week is a sharp advance in the tin market and the steady upward movement in lead. The strength of the tin market is due to a scarcity of spot metal, but quotations are purely nominal. The lead market is strong, with outside quotations higher than the Trusts' price. There is a heavy demand for lead and a scarcity of supplies has developed. The copper market is firm but quiet, the demand for this metal having fallen off temporarily. The spelter market is weak and low, there being little buying to speak of. The market declined in London as well as New York. The antimony market is quiet but firm, with the situation unchanged. The aluminum market is dull and weaker.

Copper Firm.—Prices of copper are entirely nominal for all deliveries and the market is dull. The situation, however, is unchanged, and the quietness is due to an absence of business, consumers being well covered for the meantime. The producers have control of the market. There is no sign of weakness in the situation, and there appears to be little possibility of prices being depressed materially. Local quotations are unchanged and nominal at 30½c per pound.

Tin Advances.—Quotations have advanced sharply on account of a scarcity of spot metal, and the market is strong. The tight situation in New York has been caused by consumers not being able to sell owing to restrictions applied by the British Government. Consumers under the British restrictions cannot carry heavy stocks or re-sell the tin and the spot situation is liable to be affected any time on account of these restrictions. Tin has advanced 6c, and is purely nominal at 56c per pound.

Spelter Weaker.—The market is weak and the decline continues. Buyers, however, are showing more interest than for some time, and this has given the market a better tone, despite the lower prices. Spelter has declined 2c, and is quoted at 21c per pound.

Lead Strong.—The market is strong and higher, due to the heavy demand and acute scarcity of supplies, notwithstanding the fact that the production is the highest ever known. The Trust has advanced the price of lead to 7c New York, but outside quotations are even higher at 7½c New York. Lead has advanced 1c locally, and is quoted at 9½c per pound.

Antimony.—The buying movement appears to have stopped, and consumers are well covered in the meantime. The situation is unchanged, and quotations nominal at 48c per pound.

Aluminum.—The market is a little easier owing to freer offerings of metal Quotations, however, are unchanged at 68c per pound.

Solders Higher.—The advance in the tin and lead markets has affected prices of solder, which are from 2c to 3c higher than last week. Guaranteed is quoted at 31½c, and strictly at 29c per pound.

NEW LISTS, ETC., ISSUED

A new list has been issued for galvanizing nails, as follows: Smaller than 1", $5.75 per 100 lbs; 1" to 1¼", $5.45 per 100 lbs; 1⅜" to 2", $5.25 per 100 lbs; 2½" and larger, $5.05 per 100 lbs. Galvanized, barbed, roofing nails take the following extras: Smaller than 1", $5.25 per 100 lbs; 1" and larger, $4.75 per 100 lbs.

The list on small sizes of auger bits has changed and all sizes up to 8-16 are now listed at $5 per dozen. Other sizes remain unchanged. On car bits the list has been changed to $11.25 per dozen for 6-7 and 8-16 sizes. Other sizes are unchanged. A new list has been issued for ship augers, as follows:

	With Screw	No Screw
4 to 10-16	$11.00	$13.20
11 and 12-16	12.00	14.40
13 and 14-16	13.00	15.60
15 and 16-16	14.50	17.40
17 and 18-16	16.00	19.20
19 and 20-16	18.00	21.60

A new list has also been issued on sand and emery paper in reams and rolls.

Galvanized Sheets Firm.—Galvanized sheets continue firm and unchanged, although the recent decline in spelter has affected the sheet market to some extent. The price of spelter is, however, still far too high, and makers of sheets are waiting until the spelter market assumes a definite course. There are no indications of any decline in quotations on galvanized sheets, as black and other sheets are increasing in cost, as are all materials used in their manufacture.

Hat and Coat Hooks Up.—A new price for 3-inch coppered wire hat and coat hooks has been issued. Hooks are now 65c per gross, against 60c before the advance.

Cotter Pins Advance.—The new discount on cotter pins is 85 and 10 per cent.; the old discount was 90 per cent.

Lead Sheets Higher.—Another advance in lead sheets has been made on account of the higher cost of pig lead. Sheets, 3 lbs. sq. ft., are now $11.50; 3½ lbs. sq. ft., $11.25; and 4 to 6 lbs. sq. ft., $11 per 100 pounds.

Fence Wire Advances.—Owing to the increase in cost of raw materials, makers of fence wire have advanced prices 15c per 100 lbs. The change affects plain galvanized, coil spring and O and A wires. The new prices are as follows: No. 9 coil spring, $4.50; No. 9 plain galvanized, $4.25; No. 12 galvanized, $4.40; No. 13 galvanized, $4.50; O and A, No. 10, $3.76; O and A, No. 11, $3.82; O and A, No. 12, $3.90 per 100 lbs. Barb wire is unchanged at $4.50 per 100 lbs.

Wood Screws Advance.—The advance in wood screws, predicted in Hardware and Metal last week, is now in effect. The new prices are 20 p.c. higher for bright and 10 per cent. for bronze screws. The new discounts are as follows: Flat head bright, 80 and 10 p.c.; round head bright, 75 and 10 p.c.; oval head bright, 75 and 10 p.c.; flat head bronze, 40 p.c., and round head bronze, 37½ p.c.

Ready Roofing Advances.—The advance in ready roofing, predicted by Hardware and Metal last week, is now in effect. The new prices are about 10c per roll higher, and cover practically every line on the market. The advance has been expected for some time, as the situation in the rag market has been growing steadily worse. There is a great scarcity of rags and prices are very high, with the result that the market is very unsettled. Quotations on roofing are subject to change without notice, and it would not be surprising to see still higher prices. Tarred felt has advanced from $2.60 to $3.25 per 100 lbs. The new prices are given in the current market quotations.

Building Paper Advances.—Prices of all lines of building papers have advanced from 2c to 3c per roll. Carpet felts and similar materials have all made considerable advances, ranging from 15c to 90c per 100 lbs., according to the product. Here again the market is very unsettled, and prices are liable to advance again any time owing to the situation in raw materials.

Lead Pipe Advances Again.—The price of lead pipe continues on the upgrade, another advance of 1c having been made, following the advance recorded last week. The new price was not unexpected, as the pig lead market has been climbing steadily for some time, and all lead products are consequently affected.

Wrought Iron Pipe.—The pipe market is very firm at the new prices announced last week, which are given in the current market quotations. The market in the States is also strong, with a tendency to higher prices.

Hardware Tacks Up.—Makers of hardware tacks, nails and capped goods have lowered the discount from 75 and 25 per cent. to 75 and 10 per cent., the latter being now in effect.

Shoefinders' List Revision.—Prices given in the last Shoefinders' list issued have been advanced $1.25, the list being net. The new list is being printed, and will be issued in a few days.

Cow Ties Advance.—New discounts on cow ties and stall fixtures have been issued. The new discount open and closed

ring cow ties is 40 and 5 per cent., and on stall fixtures 35 per cent.

Shot Advances.—A substantial advance of $2.25 per 100 lbs. in standard shot has been made, bringing the price up to $13.40 per 100 lbs., with extras as before. Shot has been affected, like other lines, by the high cost of lead.

Carpet Tacks, New Price.—A new discount on double-pointed carpet tacks has been issued. Carpet tacks in bulk are now 45 per cent., and in dozens 80 and 10 per cent.

Blind Staples Advance.—The new discount on blind staples is 30 per cent., and on bed staples 10 per cent.

Pipe Fittings Advance.—Prices of pipe fittings have made another advance of 5 per cent., the new discounts being as follows:—B. & C. malleable fittings, 20 p.c.; unions, 60 p.c.; cast iron and malleable bushings, 62½ p.c.; plugs, 62½ p.c.

Builders' Hardware.—Manufacturers of builders' hardware in the United States have advised the trade of another advance of 10 per cent. in their goods. Canadian manufacturers will no doubt announce a similar advance in the near future.

Scissors and Trimmers.—Manufacturers of scissors and trimmers have advanced their prices 10 per cent.

Binder Twine.—It is expected that the new prices on binder twine will be issued towards the end of this month. It is possible that there may be some delay owing to the unsettled condition in the market. There is no doubt that the new prices will be considerably higher than last year, as both sisal and Manila now cost much more than they did twelve months ago. The outlook in the market is uncertain, and some mills have ceased taking orders on this account.

Rope Market.—The cordage market continues firm, with quotations unchanged. The situation in the raw material markets shows no signs of improvement; stocks are still light, and prices maintain their high levels. Freight rates on Manila are now approximately five times higher than they were before the war, which has an important bearing on the situation.

Utensils.—The demand for most lines of ware continues steady, and prices are being well maintained. If copper, tin and spelter remain much longer at the present levels, manufacturers of ware will no doubt have to advance their prices.

Machine Screws.—Prices of machine screws are firm, and an advance may be looked for in the near future, as raw materials are steadily increasing in cost.

LONDON

LONDON, Ont., March 16.— The usual weekly budget of price changes, nearly all in an upward direction, has been brought down. And the end is not yet in sight. A great many more important changes are expected in the near future.

Business continues fairly good. Spring lines such as maple sugar making supplies etc. are moving. Country trade is holding up well.

Screws Are Higher.—Flat head bright screws have advanced 20 per cent. and the new discount is 80-10 per cent. Round head bright screws are about 15 per cent. higher and are quoted at 75-10 per cent.

Wire nails have advanced 25c per 100 lbs. folowing the advance noted in the Toronto market report last week. The new price is $3.40 base. Cut nails remain at $3.10 base.

Fence Staples Higher. — Galvanized and bright fence staples have advanced. Galvanized staples are now quoted in 100 lb. kegs at $4.65 per 100 lbs.; 25 lb. boxes, $4.90 per 100 lbs. Bright staples are quoted in 100 lb. kegs at $3.80 per keg; 25 lb. boxes $4.05 per 100 lbs.

Wire Goes Higher.—O & A wire has advanced 15 cents per 100 lbs. and is now quoted as follows:—No. 11. $3.76 per 100 lbs.: No. 11. $3.82 per 100 lbs.; No. 12. $3.90 per 100 lbs. Hay baling No. 14 is quoted at $4 per 100 lbs. Stove pipe wire in small lots is quoted at 6c per pound. In quantities the prices are. No. 18. $4.75 per 100 lbs.; No. 19, $5 per 100 lbs.

Galvanized fence wire remains unchanged at prices previously quoted.

Staples and Tacks Higher.—Blind and bed staples have advanced. Blind staples are quoted at 30 per cent. off list. Bed staples are quoted at 10 per cent. off list.

Double pointed tacks have advanced and are now quoted at 80-10 per cent. which makes the net prices as follows: No. 10, 24c doz.; No. 11, 26c doz.; No. 12, 29c doz.

Rifle and Shot Guns Up—Some lines of rifles and shot guns have advanced about 20 per cent. Shot has also advanced and is quoted at a new discount of 12½ per cent. with the usual extras.

New Prices on Valves.—New discounts have been issued on globe, check, and angle valves. Jenkins pattern and standard are now quoted at 55-5 per cent. Genuine Jenkins valves are quoted at 35-5 per cent.

Building Paper Higher.—New and higher prices have gone into effect on building papers and the new prices are per roll as follows:
Plain paper. D2. 38c; plain paper D1 54c: Tar E2, 46c; Surprise. 40c; Resin sized paper, 52c; Tarred felt, $3.25 per 100 lbs.; Carpet $3.50; Plain roofing, 2 ply, $1.05 roll,3 ply $1.30 roll; With wire edge 10 cents extra.

Advances Expected. — Higher prices are expected on plate and sheet glass, pipe fittings, turpentine. Binder twine prices for 1916 have not yet been issued, but they will be considerably higher than the prevailing prices of last year.

New Lists — New lists have been issued on small sizes of auger bits, car bits and ship augers. A new list of extras, galvanized nails has gone into effect.

WINNIPEG

WINNIPEG, March 16.—With the month of March over half gone, jobbers are making comparisons on the amount of business handled this year as against last year's results, and the balance is largely in favor of 1916. Retailers throughout the country show a tendency to place orders freely, and it is to be expected that results this year will be very satisfactory.

Scarcity of Goods.—Once again the jobbers are sounding a note of warning to their customers to place orders for all lines of steel goods, which they will require for this year, at an early date. Manufacturers are experiencing great difficulty in securing raw material and this will affect the ordinary every day lines of hardware which every retailer has to carry on hand. Such lines as steel thumb latches, and cheap steel door locks are very hard to procure. As a matter of fact, there have been no cheap steel door locks in Winnipeg since last November.

All the jobbers will be in somewhat of the same position with regard to supplying their customers.

Many Price Changes. — There are quite a number of price changes to note this week, and it will be seen that among the lines affected are wire nails, staples, galvanized sheets and barbed wire.

Another line on which advances may soon be expected is woven fencing. The manufacturers of this commodity state that present prices cannot be maintained and the same cry is heard with regard to shortage of material.

Tinware Advances. — Soldering coppers show an advance of 10 per cent., and the base price applying to same today is 55c per pound.

Various lines of tinware have taken another advance in price, the advance ranging from 5 to 7½ per cent.

Washers Higher.—Revised prices on wrought iron washers have gone into effect and prices quoted below rule today.

Wrought Iron Washers	Less Than Cases Per 100 lbs.	Full Cases Per 100 lbs.
3-16"	$13.35	$12.45
¼"	11.25	10.50
5-16"	9.85	9.20
⅜"	8.10	7.58
7-16"	7.75	7.25
½"	7.19	6.73
9-16"	7.12	6.67
⅝"	7.05	6.60
¾"	6.91	6.47
⅞"	6.91	6.47
1"	6.91	6.47
1-⅛"	6.91	6.47
1¼"	7.05	6.60

Valves Advance. — Another advance has gone into effect on the different makes of brass valves. Standard angle valves and globe valves size 1 in. are now quoted at 99c each. The Penberthy regrinding and compodisk angle and globe valves size 1 in. are now quoted at $2.10 each. From this a fair idea of how extensive these increases have been may be gathered.

Iron Pipe Goes Higher.—Wrought iron pipe, both black and galvanized has again taken a decided jump following

(Continued on page 196.)

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 17. — Spring shipments are moving out in good volume and in the trade more attention is being paid to this end of the business for the time being than to new orders. However, both on the part of the retailer and the manufacturer the buying is regarded as satisfactory considering the season and the conditions prevailing. Price changes are not important at writing but there have been developments which promise to have an early if not immediate effect; in fact changes would probably already have been made were the buying more active. These price tendencies are both up and down concerning different commodities, but the net change does not tend to weaken the general position of the market as regards ready-mixed lines and predictions of further advances in the course of a month or so are general.

Linseed Oil. — Although there is no general change on the quotations of last week for linseed oil, there are reports to the effect that earlier prices are to be looked for. One firm reports a reduction as likely before this report reaches the reader but as this would mean that the top of the range would come down it cannot be taken that the minimum would necessarily be affected. The existing situation is covered by the following quotations:

	Raw,	Boiled
1 to 2 barrels	.....97c-$1.00	$1.00-1.03
3 to 5 barrels	....96c-99c	99c1$1.02
6 to 9 barrels	....95c-98c	98c-$1.01

White Lead on the Rise.—Quotations for white lead on a basis of $11.55 for ton lots with 30 cents added for smaller quantities are as at last report. However, the situation has gained further strength on material advances on pig, during the week and, unless there should be some marked and immediate reaction, higher prices are a certainty. In fact it is stated that it is only the fact that there is practically no lead being bought at the present time—orders having been generally booked for spring supplies—coupled with the already abnormal quotations ,that have deferred an advance during the week.

Turpentine Stronger.—Reports regarding the turpentine market are conflicting, indicating both strength and weakness on the opinion of different authorities. The situation appears to be that while there has been some weakness recently in this market there has been a decided upturn in the South. Quotations are generally as at last report with the prospects that if wholesalers follow primary influences there will be an increase in the very near future. The market may be regarded as 77-78c for single barrels and 76-77c for larger quantities. At the same time 80c for single barrels is heard with the difference in this connection, that whereas a week ago this firm talked of a reduction, an early advance is now regarded as more than likely.

Gasoline Again Advances.—Still another advance on gasoline has been made this week and the market continues strong in its upward movement. Reports from the United States would indicate that increases in price are to be looked for from time to time unless there is some unexpected improvement as regards possibilities of production or substitution. Quotations which are 1 cent higher than last week are:

Gasoline, in barrels 32c
Gasoline, in drums 29½c
Gasoline, tank wagon 29c

Benzine ½c lower.

Arsenate of Lead — Following the withdrawal of quotations on arsenate of lead referred to last week, there have been new supplies of chemicals come to hand. New prices have now been announced by the Canada Paint Company on arsenate lead paste at an advance of 5 cents to 6 cents as predicted. The base quotation for 100 pound drums is 15¼ cents and for 1 pound bottles 24½ cetns.

Glass and Putty. — There are no changes in the market as regards glass and putty. Quotations are generally firm and the demand comparatively light.

TORONTO

TORONTO, Ont., March 16.—The principal feature of interest this week is the advance in prices of sheet and plate glass. Higher prices have been expected owing to the steady increase in cost of glass in the States. The Paris green situation is very unsettled and a shortage is looked for later on in the season. It is possible that white lead may take another advance in the near future on account of pig lead being so high. Turpentine is firmer and higher, but linseed oil is unchanged and, if anything weaker. The general trend of prices is upward, and the market continues firm.

Linseed Oil Firm.—The demand for linseed oil is still light, but will no doubt improve when the weather gets warmer. The market is weaker, but quotations are being held at last week's level. Flax seed is practically unchanged at Winnipeg, but there is none coming East owing to congestion on the railways and at the terminals. It is reported that very little Argentine seed is coming to Canada, so this market has not been affected so far on this account. Cake is weaker, which is having a tendency to stiffen the oil market. The situation in the oil market locally is unchanged from last week, and the following prices are being generally quoted:

	Raw.	Boiled.
1 to 2 barrels	...$1.02	$1.05 per gal.
3 to 5 barrels	... 1.01	1.04 per gal.
6 to 9 barrels	... 0.99	1.02 per gal.

Turpentine Advances.—There is very little movement in turpentine, but the market is a shade stronger and higher. The market is expected to remain firm for some time, as stocks in the South are getting low, and the demand may improve any time. The following prices are being quoted for turpentine in Toronto: 1-barrel lots, 79c; 2 to 4 barrels, 78c, and 5-gallon lots, 86c per Imperial gallon.

White Lead Firm.—The recent advance of pig lead to 7c in New York has increased the possibility of another advance in white lead in the near future. Indications point to continued strength in the pig lead market, and further advances. White lead is being quoted locally at $11.70 per 100 lbs. in ton lots.

Paris Green.—While it is hardly probable that the consumption of Paris green will be materially affected by the high prices, it is possible that the supplies available later on in the season will not be sufficient to meet the demand. The scarcity of the necessary chemicals is causing considerable anxiety to the manufacturers, and may cause them to restrict their output. It is reported that the manufacturers will only make up Paris green against orders, and in any case carry very light stocks. In the States, manufacturers will make about half the quantity produced last year, in which case there is little chance of Paris green being imported into Canada. This will throw the domestic demand on to the manufacturers in Canada. The situation is acute, with no prospect of any relief.

Glass Advances.—An advance in glass has been frequently referred to in these columns, as conditions in the American market warranted higher prices here. The new discount on sheet glass is 30 per cent., being the same for the city and country. A few weeks ago this discount was in effect, but was changed to 30 and 10 p.c., the 10 p.c. having now been removed. The discount to the trade on plate glass is now 30 and 5 per cent., as against 35 per cent. formerly. The following arrangement for plate glass only has been introduced. The above discount 30 and 5 p.c. will be f.o.b. warehouse on

all orders up to and including $50 gross list or less. On orders over $50 gross list, delivery charges will be paid, but there will be an additional flat charge of $10 to cover casing, cartage, insurance and freight. This arrangement applies to specifications which can be put in a box car. Any charge for freight, etc., over the $10 will be absorbed by the dealer.

Gasoline.—The market is firm and prices are unchanged. Higher levels, however, are looked for in the near future, as the consumption of gasoline is steadily increasing. There is no improvement in the oil situation.

Putty.—The market is firm and unchanged. The following prices are being quoted in Toronto for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, in casks	$2.65
Bulk, in 100-lb. drums	2.85
Bulk, in 25-lb. drums	2.95
Bladders, in barrels	3.25

Pure putty, 70c per 100 lbs. advance.

WEEKLY HARDWARE MARKETS

(Continued from page 194.)

the advances in East, last week, and below are given to-day's prices.

Black Iron Pipe.		Galv'd Pipe.	
3/8"	$ 3.40	3/8"	$ 5.66
1/2"	4.25	1/2"	6.62
3/4"	5.10	3/4"	8.22
1"	7.46	1"	12.12
1 1/4"	9.50	1 1/4"	1[illegible].00
1 1/2"	11.50	1 1/2"	17.50
2"	15.00	2"	24.00

Well Casing Higher.—The latest prices on well casing both Screw and Socket and Inserted Joint also shows how this line is being affected under present conditions. Prices to-day are as follows:

Well Casing Screw & Socket.	Ft. Wm. Per 100 Feet	Win'pg.
4 1/4"	$38.29	$42.09
4 1/2"	41.39	45.45
5"	47.47	52.21
5 5/8"	58.61	64.52
6 1/4"	67.05	73.77
Inserted Joint.		
4 1/4"	$39.18	$42.85
4 1/2"	42.30	46.30
5"	48.60	53.25
5 5/8"	60.05	65.77
6 1/4"	68.65	75.17

Screws and Tacks Higher.—Flat and round head bright wood screws have advanced and flat head bright are now quoted at 75-10 per cent. off list. Round head bright screws are quoted at 70-10 per cent.

Carpet tacks have also advanced and the discount now in effect is 75 per cent. off list. Black iron rivets are quoted at 45 per cent. off.

Coppered rivets and burrs, assorted No. 8 are quoted at 24c per lb.; No. 10, 26c per lb. Burrs only No. 8, 27c lb.; No. 10, 29c lb.

Nails, Wire Higher. — Wire, nails, staples, bale ties, etc., have al advanced, following the advances noted in our Eastern market reports last week. It is altogether likely that further advances will take place in the very near future. Wire nails are quoted $3.60, Fort William and $4 per keg at Winnipeg. Quotations on other lines at Fort William and Winnipeg are as follows:

	Ft. Wm.	Win'pg.
Staples, bright, per keg	$3.75	$4.15
Wire bale ties	4.35	4 75
Stove pipe wire	....	6 1/2
Plain galv'd wire, No. 9	3.75	4.05
Plain galv'd wire, No. 12	3.95	4.25
Coil spring wire, No. 9	3.80	4.10
Barb wire, Lyman	3.55	3 80
Barb wire, Glidden	3.40	3.65
Barb wire, Baker	3.35	3.60

	Winnipeg
Galvanized Sheets, 10 3/4 oz.	$7.25
28-gauge	7.00
26-gauge	6.70
24-gauge	6 30
22-gauge	6.20
18, 20-gauge	6.00
16-gauge	5.85
Black Sheets, 28-gauge	4.75
26-gauge	4 60
17 to 24-gauge	4.50
10 to 12-gauge	4.30

GOOD ROADS CONGRESS

On March 6th the opening occurred of the Third Canadian and International Good Roads Congress at Sohmer Park, Montreal, for the furtherance of the public good by the agency of improved roads. To educate public opinion on the economic importance of good roads and to point out to every class in the nation how closely related good roads are to its continued prosperity and advancement are amongst the avowed purposes of the congress.

The present convention is meeting with an unusual degree of success in the matter of its attendance which from the first day has been in excess of that expected on a basis of past experience. There is a very good representation from all over Canada as well as from adjacent American cities.

INCORPORATIONS

The Wilson Scale & Machinery Corporation, Ltd., has been incorporated at Toronto with a capital of $100,000 to manufacture, scales, tools, machinery implements, utensils, hardware, etc., at Toronto. Ont.

The Hughes Electric Heating Co. has been granted a provincial license at Toronto to manufacture electric heaters and other electric appliances. The capital is not to exceed $50,000 and the head office is at Toronto.

The Powers Accounting Machine Co. of Canada, Ltd., has been incorporated at Ottawa with a capital of $25.000 to manufacture perforating, tabulating, adding, calculating machines, etc. Head office to be situated at Montreal.

The Stanley Steel Co., has been incorporated at Ottawa with a capital of $250,000 to carry on the business of iron and steel makers, smelters, engineers, sheet metal and rail rollers, etc. Head office to be situated at Hamilton. Ont. Incorporators, A. . Hatch, F. M. Hatch and T. C. Haslett, all of Hamilton.

THE PAINT SINNER SINNED AGAINST

Following is a continuation of article which appears on Pages 172 and 173.

it seemed was sometimes sinned against as well as sinning.

"Do you mean to say you're making sixty-five cents off me on a gallon of paint?" I thundered. That poor traveling boy; his look was terrible when he realized what he had done. And so was the dealer's. However, he stuck by his guns. "That's not all profit. A good many things must come off that in overhead charges. I'm sorry but that's my price."

I drew myself up with an air of conscious virtue. "So am I but I can't allow myself to be victimized this way."

It seemed the easiest way out of an uneasy situation; I saw the look of hunger in the dealer's eye when he looked at young hopeful and it was the look of blood hunger. I thought I had better be going. Besides I wanted to collect my pound of flesh from that first dealer. The door jammed for a moment on a fold of my coat as I went out and I caught the angry interjection. "You ——— price maintenance, ——— kill it yourself."

A business organization may be ever so magnificently constructed; may be organized with almost infinite perfection. yet a few erroneous policies will run the organization into an "iceberg," and the work of years, the experience of many men all go down in the mad whirl of business blunders.

CATALOGUES AND BOOKLETS

WHITE'S, LTD., NEW CATALOG

Whites, Limited, wholesale hardware and metals, Collingwood, Ont., have just issued in a substantial binder, a 622-page loose-leaf catalog of general hardware lines. The new catalog is attractively gotten up, is well illustrated, and contains a number of standard lists in addition to special lists. Sheets illustrating new goods will be issued frequently and sent to those who receive the catalogue. Whites, Limited, have endeavored to prepare the catalog in such form that it will be of real practical value to the retail hardware merchant.

• • •

MYERS' SPRAY PUMPS

F. E. Myers & Bro., Ashland. Ohio, recently issued catalog S P 16, consisting of 64 pages featuring spray pumps for spraying, painting and disinfecting. The catalog also contains formulae for spraying, and a spraying calendar.

Current Market Quotations

These prices are for such quantities as are usually ordered by retail dealers. Large buyers can frequently make purchases at better prices.

Re Gauges of Sheets.
In the quotations which follow on sheets, it is advisable to note that Queen's Head, Fleur de Lis, and Gorbal's Best Best, also Colborne Crown are English gauges, while Apollo and Premier are U.S. gauges. American 10¾ oz. is the same as English 28 ga.; American 28 gauge is the same as English 26 ga. The heavier gauges are almost identical, the English sheets running slightly lighter than the U.S. standard.

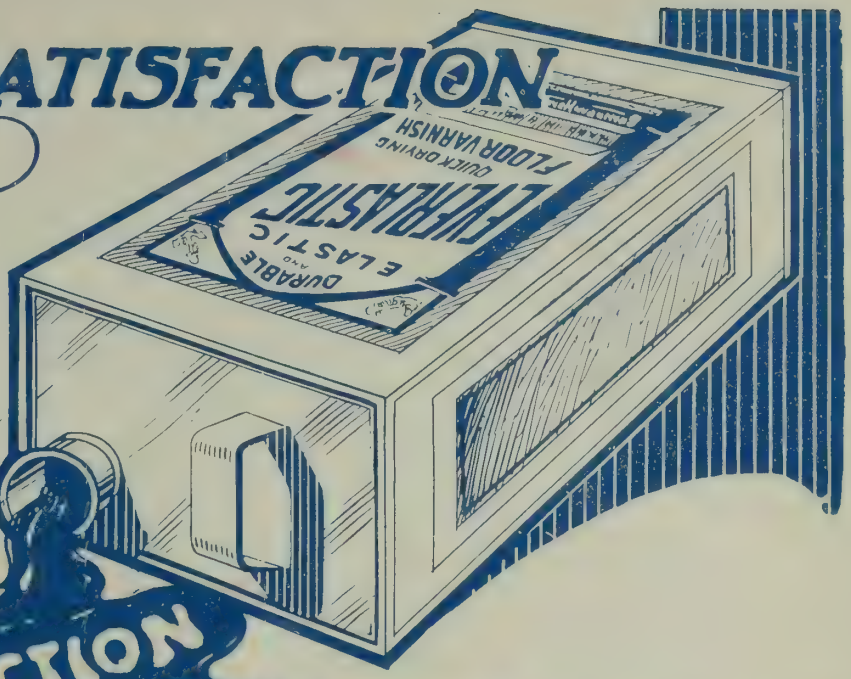
SPREADS SATISFACTION on any floor



SATISFACTION

"EVERLASTING and ELASTIC"

are the words from which the name of our quick-drying Floor Varnish

"EVERLASTIC"

has been derived. The two qualities of durability and elasticity account for the general satisfaction this Varnish is giving to consumers throughout Canada.

Hardwood floors are usually the pride of the householder, and when you recommend to them a Varnish like

"EVERLASTIC"

they feel that you have done them a good service.

Made in Canada

Sold on Merit

The Paint that is Easiest and Most Profitable to Sell

Martin-Senour 100% pure paint is unsurpassed in quality because it is made so good that there is no room for others to improve. It has to be sold only once; after that it sells itself. First users become your friends and steady customers.

Regardless of scarcity or high cost of raw materials, 100% pure paint never changes in quality—the formula of purity is strictly adhered to, and your customers are protected by our absolute guarantee printed on the label of every can.

The materials entering into the manufacture of 100% Pure, namely, pure white lead, pure oxide of zinc, pure linseed oil and turpentine dryer, have been found by expert paint chemists and experienced painters through exhaustive tests to be the materials best suited for paint making. Therefore, by supplying your customers with 100% Pure you are giving them their full paint value and assuring them of lasting satisfaction, which is not obtainable with adulterated materials.

This high quality, together with the strongest advertising and sales promotion work, has made 100% Pure the Canadian paint users' first choice, and that is just why it is the easiest and most profitable to sell.

MARBLE-ITE FINISH

STANDS THE SCUFF

Marble-Ite is "the distinctive floor finish" with the money-back guarantee, which from its reputation is much in demand by people who wish to make and keep their floors "Spic and Span."

It gives lasting beauty and satisfaction on floors of all kinds. It dries quickly with bone-like hardness. It is heel-proof, water-proof and almost wear-proof. It won't mar or scratch white, crack or blister.

Write us for a sample—Prove it for yourself.

A MONEY-BACK GUARANTEE

"Marble-Ite" floor finish is made of the finest varnish gums and oils by most modern and scientific methods, and when used according to directions on the can, is guaranteed to give absolute satisfaction on every floor it covers. Our Dealer-Agents are instructed to refund the purchase price, or replace the varnish, if it doesn't do all we claim.

The Martin-Senour line of Varnishes, Stains and Enamels is most complete.

In addition to Marble-Ite, the "distinctive floor finish," are the following leaders, each guaranteed to best serve the purpose for which it is made:

DURABLE OUTSIDE SPAR. For highest class exterior work where extreme durability is required.

FINEST INTERIOR FINISH. For high-grade interior work

WOOD-LAC. The "Stain of Fame."

MISSION-TONE WOOD DYE. For procuring beautiful mission effects.

VARNOLEUM. For beautifying and preserving oilcloth and linoleum.

MARTIN'S WHITE ENAMEL. (The Enamel de luxe). It stays white.

These unsurpassed quality products create and retain trade for the Dealer who handles them.

BOECKH TRADE MARK EST'D 1856 TORONTO

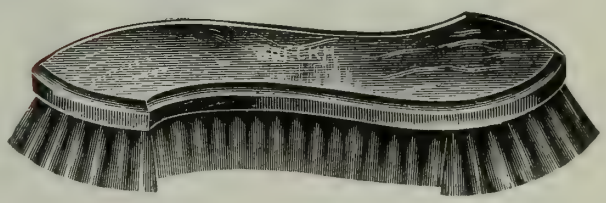
The Bristles CAN'T Come Out

"Steel Grip" Paint and Varnish Brushes

Practical painters prefer "Steel Grip" Brushes **because** they know the bristles can't come out and handicap them in their work —**because** they are easy to work with on account of their flexibility —**because** the proportions of the handle means freedom from cramped fingers—**because** they give a maximum of brush service—**because** they are guaranteed.

Boeckh's Household Brushes

Bannister Brushes, Hair Brooms, Scrub, Shoe and Stove, Window and Waxing Brushes, etc., have the appearance that appeals to the housewife, and they sell at a price that pleases the pocket-book and give service extraordinary.



Boeckh's Guarantee

WE PROTECT THE DEALER AND CONSUMER WITH OUR "GUARANTEE"

Each and every Brush which bears the name BOECKH is absolutely "guaranteed," and if found defective it may be returned and will be replaced with a new one—entirely at our expense. The dealer cannot lose on Boeckh's Brushes, and, besides, the customer is assured of getting satisfaction.

Lowe Bros. Purpose

Lowe Bros. Purpose is—to create an organization in which the consumer, the dealer and we, the manufacturer, are like a family, so close is our common interest, so great is our trust and belief in each other's integrity and ability.

Lowe Bros. Policy

First: To make "High Standard" paint the very best that the art of paint-making is capable of to-day—our fifty years' scientific experience helping in no small measure to this end. Second: to treat our customers and the public just exactly as we would like to be treated.

Lowe Bros. Publicity

Like the elephant's trunk, it's flexible and it's always reaching for—and getting—something new and good. Bill-boards, newspapers, magazines, circulars and letters form the back-bone of our complete 1916 campaign. Hand in hand with our 50 years' experience in making paint has marched 50 years of knowing how to sell it for our dealers.

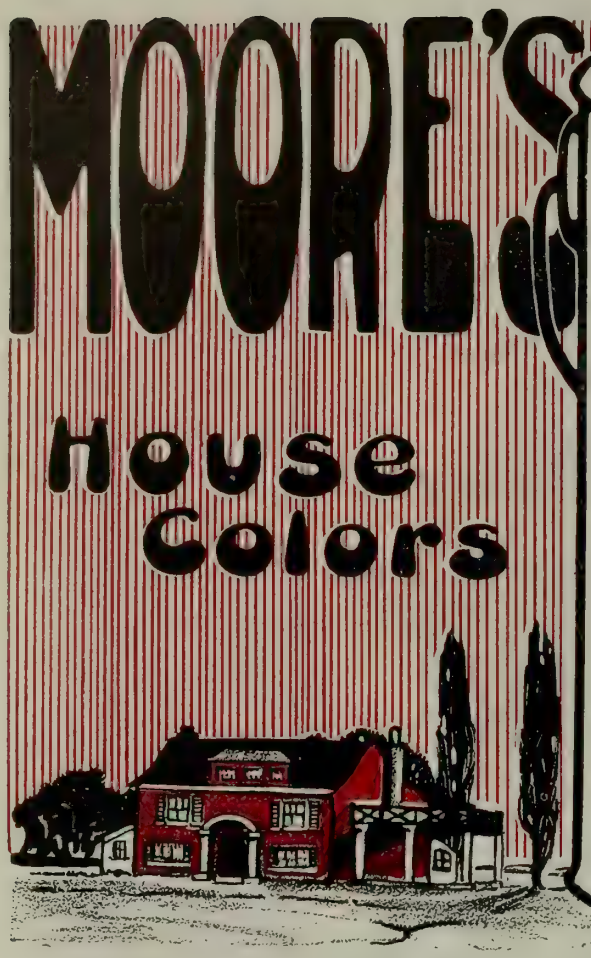
Lowe Bros. Paint

Is sold on an agency basis that makes our customer our partner—gives us mutual aims, gives us a complete understanding—gets us both results. If you are not a Lowe Bros. agent, and if you are the right man, there is a proposition here that will open your eyes.

WRITE US TO-DAY ABOUT IT.

Lowe Brothers
Limited

TORONTO



A Pure Linseed Oil
PAINT

This paint is made from the very best and most lasting pigments combined with Pure Linseed Oil and the very best liquid dryers.

Dries perfectly hard and without gloss, yet possesses sufficient elasticity to prevent cracking or peeling.

Its working and lasting qualities have been thoroughly tested at seashore and inland, and numerous testimonials as to its merits by both dealer and consumer.

The Moore Line

MURESCO — The best wall finish.
HOUSE COLORS — A pure linseed oil paint.
FLOOR PAINT — Dries hard over night.
MOORAMEL — Perfect flowing enamel.
TILE-LIKE — Varnish and stain combined.
SANI-FLAT — A non-poisonous flat oil paint.

The Painter's the Man You've Got to Please

To Do Paint Selling With the Greatest Ease

and Profit.

The Moore Line is right on the Job.

Sales of the Moore line come double-quick, because the quality is high and the price comparatively low.

When you sell to a painter once you are practically sure of his future patronage.

It will be well worth your while to let us put our agency proposition before you. Write.

Does Every Dollar you receive for your Paints and Varnishes represent the giving of full value for your customers?

This is a very important question—a material increase in your business probably hinges upon it, because trade invariably follows value.

There are many kinds of paint—good, medium and bad. Some cost high and are not worth it. Some are cheap and yet not worth their price, being full of adulterants.

JAMIESON'S

Pure Prepared Paints and Varnishes

Represent a value seldom placed before the trade. They are second to none in service, and their price is comparatively low for that of good quality.

We would like you to ask to be shown, because we have abundance of proof that our claims have a substantial foundation.

Investigate now—it costs nothing, and may be worth hundreds, perhaps thousands of dollars to you.

Your request for particulars and proposition will receive our immediate attention. Make it.

Collins' Guaranteed SPRAYERS

We have been making sprayers since 1900. Our leaders are:

Sturdy Sprayers:—Hold four gallons, have three spray caps, spray anything from disinfectant to whitewash.

Crown Sprayers:—Hold one quart. The regular imperial fruit jar is used. Makes a double spray. Used for spraying cattle and general use. Will not rust. We also make glass sprayers in ½ pint size. One quart tin sprays. Sprays for spraying floor wax.

415 Symington Ave. - - Toronto

Would you believe words could be printed on Wood Veneer?

The veneer is very thin, in fact as thin as paper, and then it is mounted on heavy cardboard. The new sign which we are distributing to Hardware stores is a good sample of this kind of work. The lettering on this sign is inlaid in a different kind of wood veneer. All this helps make the sign interesting and when it is displayed by a Dealer selling Simonds Hand or Cross-Cut Saws it invariably creates a great deal of interest. A high-grade saw like the Simonds should necessarily be represented by a high-grade sign. We will send one or two to any customer selling our saws, whether buying direct from us or through a jobber.

W. H. BANFIELD & SONS

370-386 PAPE AVENUE
TORONTO - - CANADA

Mr. Hardware Man, this is a good line. Look up your friends who own a garage and talk lockers to them.

Lockers that are made of wood are most unsanitary, and an additional fuel in case of fire.

Our metal lockers are highly sanitary and made on strictly hygienic principles.

They will not burn, and they occupy but a small space. They are light and airy, and each has a different lock.

These lockers are a great benefit to places where a number of people are employed. They prevent contact of one person's clothing with another's, thus avoiding possible contagion.

Illustrating our **Combination Tool and Clothes Locker.** This is the ideal locker for Machine Shop and Garage. We can equip our Locker to suit the most exacting requirements.

We manufacture Steel Shelving for all purposes.

Eureka Fountain Compressed Air Sprayer

Automatic Controlling Valve is directly in front of the handle, and the Controlling Lever is directly under the handle, so that it is easily operated with one finger.

Saves its cost. This valve and lever will save the cost of the sprayer in making a given amount of solution do so much work. One filling and one minute spraying will spray 2,000 plants. None is wasted.

No complex or intricate parts. Ask for catalog.

LINES THAT WILL APPEAL TO YOU BOTH IN SALEABILITY AND PROFIT

The goods we manufacture have given distinctive service and satisfaction for years and are considered a source of much business by all our dealer customers.

Eureka Glass Tank Sprayer

is reliable, durable and inexpensive.

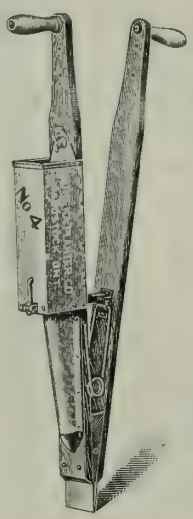
The receptacle of this sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover.

The pump cylinder is made from I.X. tin and is considerably longer than the ordinary glass tank sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service.

This sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock.

Ask for catalog.

Eureka Corn Planters



Two Hand

Made in one hand and two hand styles.

Both are well finished and are light and durable and both positive and accurate in their action.

The materials used are the very best.

A seed guard adjustable by a nut outside the hopper determines the number of kernels to be dropped in each hill. It is so devised that no matter what position the steel slide (what slide back and forth on the hopper base) is held only one lot of seed can pass into the jaws at one time. A flat steel spring is used in place of the cheap brushes used on ordinary planters and which are constantly wearing out.

Let us give you other reasons why it is a good line to carry.

Write for catalog.

PEERLESS PERFECTION

THE FENCE THAT STAYS "PUT"

PEERLESS Perfection is one of the easiest fences to erect, because it stays "put." It can be erected over the most hilly and uneven ground, without buckling, snapping or kinking. Every joint is locked together with the well-known "Peerless Lock." The heavy stay wires we use prevent sagging and require only about half as many posts as other fences.

Peerless Farm Fence

is made of the best Open Hearth steel fence wire. All the impurities of the steel are burned out and all the strength and toughness left in. Makes the fence elastic and springy. It will not snap or break under sudden shocks or quick atmospheric changes. Our method of galvanizing prevents rust and the coating will not flake, peel or chip off.

Send for catalog. It also describes our farm gates, poultry fencing and ornamental fencing.

Agents nearly everywhere. Agents wanted in unassigned territory.

Fixture Installed by
J. G. SEIP
Linwood

Two Essentials for the Up-to-date Store

Good Appearance and Good Service

If you intend to buy equipment for your store do not be deterred by first cost—if you can afford it. Consider whether it will save you money, increase your facilities and bring you additional trade.

The difference in cost between a fixture properly made and finished and one that is "good enough" because cheaper in first cost would not be considered for a moment, if you could make comparisons before instead of after you have installed it.

Illustrated catalog and estimates gladly furnished.

The Walker Bin and Store Fixture Company, Limited
BERLIN MANUFACTURERS AND DESIGNERS OF MODERN FIXTURES ONTARIO

Quality and Price that Creates Unusual Demand

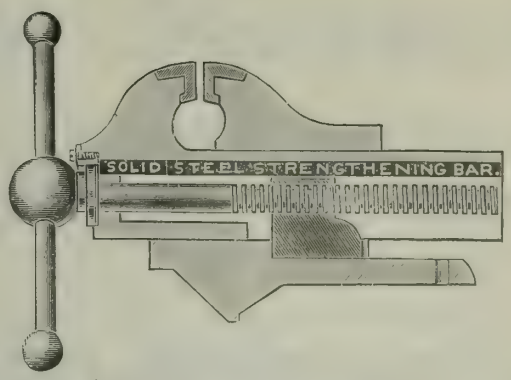
22X	"			3¾ "	"
23X	"			4¼ "	"
24X	"			4¾ "	"



Showing Reinforced Slide

The Solid Steel Strengthening Bar as used in the Slide of Parker's New Vises, combined with the blending of steel and best iron in the making of the castings (known as Semi-Steel) make them practically unbreakable.

This is why the machinist will have no other. Then the Steel Jaws can be removed and replaced when necessary.

The low set jaws make them the most desirable vise for the mechanic to use.

To Sum Up

Parker's Vises are the best that money can buy.

They are sold at a reasonable price.

They are taken in preference to others in the leading machine and railroad shops.

A New Serial Story to Start Soon

IN an early issue the publication will begin of a new serial by Arthur Stringer. Canadians have followed the spectacular rise of this young writer with great pride, and, when his remarkable story of the west, "The Prairie Wife," ran through Saturday Evening Post something less than a year ago, it was felt that he had reached not only the pinnacle of literary fame but the heighth of his power—for "The Prairie Wife" was undoubtedly one of the finest love stories ever written and a graphic picture of the life of the Western homesteader as well. But Arthur Stringer is only beginning to show his power, and in "The Anatomy of Love" he brings forward an entirely new style; it is different from anything he has ever done before and in many ways is a better and bigger story than any of his past efforts. It is a magnificently done piece of work and suggests that there are no limits to his versatility and capacity.

The Anatomy of Love

By

Arthur Stringer

Arthur Stringer

is Canadian born and bred. His first journalistic experience was secured in this country, but he decided to try his fortune in the bigger field that offers in the United States and accordingly went to New York. All young writers have their vicissitudes, and Arthur Stringer did not escape the common fate; but success nevertheless was not long in coming. He "broke" into the magazines early and soon became recognized as one of the brightest of magazine short-story writers. During the past few years he has become one of the "head-liners"—the established writers, whose stories are eagerly sought after, and whose names are printed in black type on magazine covers. His work has been found regularly in such publications as Saturday Evening Post, Cosmopolitan, Colliers, Hearsts, Century—and in fact all the leading magazines. He has written a large number of books of all kinds—tales of secret service detectives and counterfeiters, rare yarns of adventure, business stories, character stories, love stories. The genius that he displayed in "The Prairie Wife" will be found in a rarer degree still in "The Anatomy of Love."

By securing the right of first publication of "The Anatomy of Love," MacLean's is in a position to offer its readers the finest feature ever presented by a Canadian periodical. This may seem a sweeping claim to make, but no one who knows Arthur Stringer's work well will question it.

A recent photograph of Arthur Stringer

A great story by a great Canadian author

Will Start in June MacLean's

Addition to Electro Assortment

ON this page is shown an addition to Hardware and Metal's electro assortment for retail hardware dealers. With the cuts shown below the assortment now totals 219. These electros are supplied to hardwaremen at the small cost of fifteen cents each. Cash with order. Sheets showing the whole assortment will be mailed on request. Since the introduction of this service by Hardware and Metal a few months ago, orders have been received from all parts of Canada and many of the largest retail concerns in Canada are now using Hardware and Metal electros regularly in their newspaper and circular advertising. Many merchants in the small towns have also taken advantage of this service. Be sure and order by number.

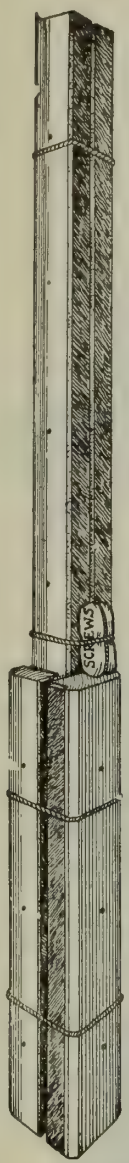
Swan Weatherstrip



THE ONLY ONE OF ITS KIND.

Made of solid oak and best quality felt—first-class workmanship.

GOOD APPEARANCE

The oak is nicely finished, the felt is green in color—fits snugly.

CONVENIENTLY PUT UP

in sets complete for one door (see cut), holes are drilled—ends coved — nails supplied — no trouble — no waste.

SELLS AT SIGHT.

The best selling weatherstrip on the market — because of its efficiency, common-sense construction, and good appearance.

If you have previously handled the Swan Weatherstrip, get your order in early, so as to avoid disappointments in delivery. If it is new to you, get acquainted. Send for samples and description.

Canadian Made.

Swan Mfg. Co.
929 Maryland St., Winnipeg, Man.

R. BIRD & CO.
Crewkerne, England
Wholesale. Orders through merchants.

WEBBING

Manufacturers of
Cotton, Linen and Woollen Webs, Straining Webs, Ready-Made Girths, Rollers, Surcingles and Horse Clothing of every description for the Saddlery Trade; also of **Chair, Tray, and Cocoa Binding Webs,** for Upholstery Purposes.

143-153 University Avenue
TORONTO CANADA

Every Minute Pays → YOU ←

IS every minute of your spare time bringing you profitable returns? Through the day time you earn money—why shouldn't your spare time be devoted to bringing you in an extra income?

We would be pleased to tell you about a plan, that although not interfering in the least with your regular duties, will produce for you an extra $10.00 a week. That amount can be increased as you become proficient in the work, and bring into play the salesmanship that your regular occupation gives you.

We need a man in your home town to represent us, and for that service, his earnings will be liberal. That, we will tell you all about when you write us.

Do so to-day—next week every minute of your spare time will count for you in cash.

The MacLean Publishing Co.
143-153 University Ave.
Dept. C. G. Toronto, Can.

Elgin Wrenches

stand for convenience and service. Excel in appearance, finish, durability. The convenient Wrench for inconvenient places. Convenient to use, easy to carry, effective in results.

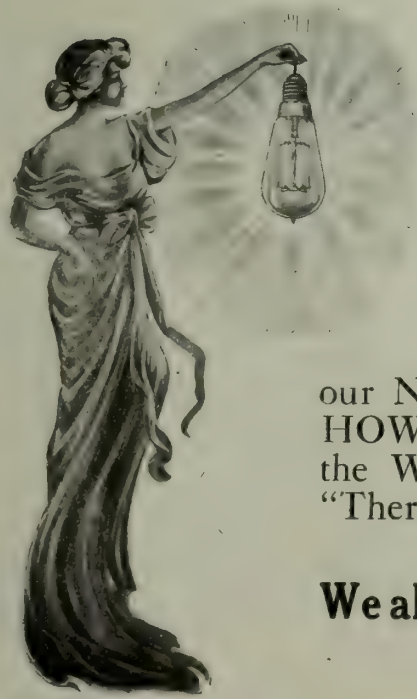
OSHAWA, ONT.



"Made in Canada"

WHY

DEALERS everywhere find it better to SELL

NITRO K-T LAMPS

than to COMPETE with them

BECAUSE

our NITROS are MADE by EXPERTS who KNOW HOW to MAKE them and MAKE them RIGHT, and the WISE DEALER is he who has LEARNED that "There are others" who DON'T know HOW.

We also make the K-T Vacuum Type Tungstens

Every Automobile Owner Wants Protection Against Accidents

Every Ford Owner is a good prospect for a

LINE SUB-RADIUS ROD

because it insures radius rods from breaking—or bending—keeps the front axle in perfect line at all times. Stops the vibration of front axle, giving that steadiness to the steering wheel that heavier cars have.

By eliminating the vibration of the axle it reduces wear on ball and socket on rear end of radius rods.

It will make the car run much straighter and easier to steer, especially on roads that are rutted badly.

Simple, Dependable, Durable, and a Money Saver for the User.

A line that will pay you a handsome profit and bring you much business.

Manufactured by

Line, Hansen & Kimball Co.

50 High Street - Moose Jaw, Sask.

Convenience, Quickness and Economy That Fills a Long-Felt Want

by simply pressing on the plunger. The oil is entirely controlled by the operator in whatever position the can may be held.

SAVES THE OIL. As the flow of oil ceases the instant the pressure on the plunger stops, not a drop of oil need be wasted.

TRY IT. THE SALES WILL SURPRISE YOU.

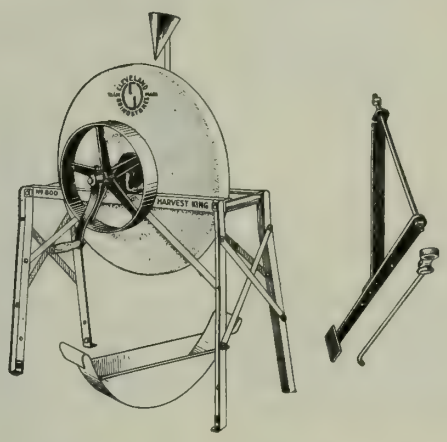
R. E. BLOOMER, Keithsburg, Ill.

"Cleveland Grindstone"

QUALITY

at a

Popular Price



"HARVEST KING"

Genuine Berea Sandstone — quarried at Berea, Ohio.

Sold only to Hardware and Implement dealers.

The First and Only grindstone made to satisfy the universal demand for "Genuine Berea" quality at a medium price.

Regular Standard High Grade, 24x2″ stone, 20% larger than furnished in any similar frame; only grindstone of its class with roller bearings.

Stout angle steel frame fully braced. Pulley 12x2⅜ in. Hand crank and dip cup. Weighs complete about 125 lbs. Comes to you stone crated and frame-folded, all ready to put up by merely bolting ends of side braces.

Catalog on Complete Line

Send for this Catalog. Include name of your Jobber and we will mail copy of our famous book: "How to Keep Mail Orders at Home."

Make your store distinctively different both in appearance and service

and you'll command the biggest trade in your vicinity

Our Metal Shelf Boxes will enable your clerks to keep system and give your customers quicker and more satisfactory service.

With these Patent Metal Shelf Boxes, the articles are displayed on the outside of each box, a system which greatly facilitates selection by the customer and often recalls needs to him which he would forget were it not for this display.

Great strength prevails in all these boxes—they will last a lifetime. Supplied in any finish desired. Tell us your requirements and we will sketch a plan for an assortment of boxes and quote you prices on same.

A Number Of Our

Metal Shelf Boxes

NICELY ARRANGED

WILL DO IT

We also make a splendid line of **SHELVING, DISPLAYING, COUNTERS, NAIL BIN COUNTERS, SCREW CASES, etc.**

WRITE FOR DESCRIPTIVE MATTER.

HERE'S A CHANCE FOR THE CANADIAN HARDWAREMAN

We want Canadian Hardwaremen, Ironmongers, House Furnishers, etc., to get into touch with us with a view of fixing up Agencies for the Daisy Vacuum Cleaner in Canada.

The "Goods" we offer are a perfect example of *British Manufacture.* The terms will appeal to you, the margin of profit liberal. A large range of hand and electric models from $7.50 to $94.50.

THE DAISY VACUUM CLEANER

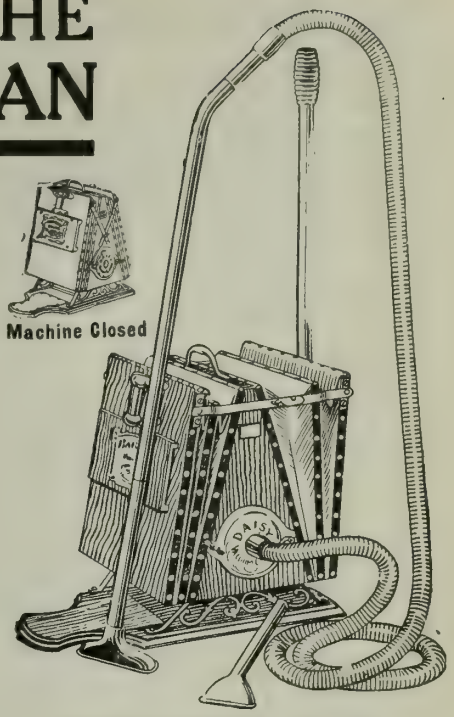
Of the Machine itself—

WOOD—Seasoned Oak. CASTINGS—Well Finished. LEATHER—Best Selected. PLATING—Well Coated. EFFICIENCY—Unequalled. Those are the "Daisy" Arguments.

Talking Arguments are not required.

Ask your Shipper for details or write us direct.

Sole Makers—**THE DAISY VACUUM CLEANER CO., LTD.**
Head Office and Works—Leamington Road, Gravelly Hill, Birmingham, Eng.
Telegrams: "Ileklean, Birmingham." Telephones: 405 and 406 East. ABC 5th Ed.
London Showrooms—17 Philpot Lane, Fenchurch St., E.C. (1 minute from Bank).
Contractors to the British Government.



"BABY DAISY" $21.00

Handsomely made in solid oak, with nickel-plated fittings, has quadruple bellows, and is collapsible. Complete with 6 ft. hose, carpet nozzle, upholstery nozzle, lengthening tube and lever brush nozzle.

Registers Imperial Gallons

CANADIAN DEALERS— This is one of the fastest selling Auto Accessories of the year—

Every Ford Owner needs the Challenge Gasolene Gauge. Show it to him and he will buy it. The reason is simple. Though the car may cost $500 or $600, it is no good without gasolene. The owner cannot afford to be in doubt as to his gasolene supply. At small cost he can ascertain the exact amount at any moment. No guesswork.

The Challenge Gauge will register the contents of a gasolene tank at all times and under all conditions. It is safe, leakless, accurate and durable—outlasting the car. Why not sell them in your neighborhood? A good profit and quick sales for you. It is an important part of every Ford.

Ask your Jobber or write us.

Goodyear Superiority

THE Goodyear Tire & Rubber Company of Canada, Limited, is inevitably linked with all that is supreme in rubber goods. It is an industry of tremendous proportions—serving the people in the conservation of energy and the transmission of power.

The Goodyear Automobile Tire is the largest selling tire in the world.

The Goodyear Truck Tire has yet to meet its equal.

The Goodyear Motorcycle Tire has been adopted by every leading motorcycle manufacturer for 1916.

The Goodyear Carriage Tire is now used by 70 per cent. of the vehicle manufacturers of the country.

Goodyear Bicycle Tires are recognized as having standardized bicycle tire design and construction.

The Goodyear "Wingfoot" Air Heel is rapidly displacing the old type hard rubber heel.

Goodyear Neolin is superseding leather in some of the latter's most important uses.

Goodyear Belting Hose, Packing and Valves hold an enviable position in the mechanical goods field.

These are the facts which must win you to Goodyear superiority.

When you sell Goodyear Garden Hose you are not selling hose of an unknown make. Goodyear Hose carries with it the name and reputation of all the Goodyear products.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED—HARDWARE CLERK WITH FOUR or five years' experience, to act as city traveller. Must be good salesman, and good personality. Give references and state salary needed. Apply Peart Bros. Hardware Co., Regina, Sask. (12)

WANTED—A GOOD SALESMAN CALLING on hardware dealers and painters, also a good railroad salesman, to take a well-known paint specialty line on commission. All enquiries treated confidential. Apply Box 260, Hardware and Metal. (tf)

WANTED—HARDWARE CLERK IN SMALL town of 1,500 population. One or two years' experience. Sober, industrious. Good opportunity for right man. State age, salary, whether married or single. Box 265, Hardware and Metal. (12)

WANTED — POSITION AS HARDWARE clerk, with Western experience; steady employment. Can furnish best of references. Box 253, Hardware and Metal. (14)

LIVE HARDWAREMAN USED TO MANAGing and buying, thirteen years' experience in farm and high-class hardware. Open for engagement now or in spring. Box 262, Hardware and Metal. (12)

FOR SALE

FOR SALE — FIRST-CLASS HARDWARE and stove business in good manufacturing town, with all factories busy. This stock is all in first-class shape and all bought at the old prices; will run about $5,000. This is a money-maker and worth investigating. Box 263, Hardware and Metal. (12)

FOR SALE — HARDWARE BUSINESS IN southern Saskatchewan, on Soo line. Best wheat growing district. Town having five elevators and large trading territory. Present owner wishes to leave for family reasons. Apply to Box 248, Hardware and Metal. (12)

HARDWARE AND TINSMITHING BUSIness in central B.C. Five to twelve thousand dollars will handle. Good reasons for selling. Apply Box 261, Hardware and Metal. (12)

FOR SALE — ESTABLISHED HARDWARE business. Excellent site in West End of Toronto. Both residential and factory districts to draw from. Stock about $4,000. Must sell on account of continued ill-health. T. E. Hoar, 1760 Dundas St., Toronto.

FOR SALE — GENERAL HARDWARE IN best farming and manufacturing district of New Ontario. Only reason for selling is poor health. Stock $10,000. Will accept special rate and good terms for quick sale. Apply L. C. Wideman, Charlton, Ont.

MISCELLANEOUS

THE RESULT OF SELLING A QUALITY ARTICLE

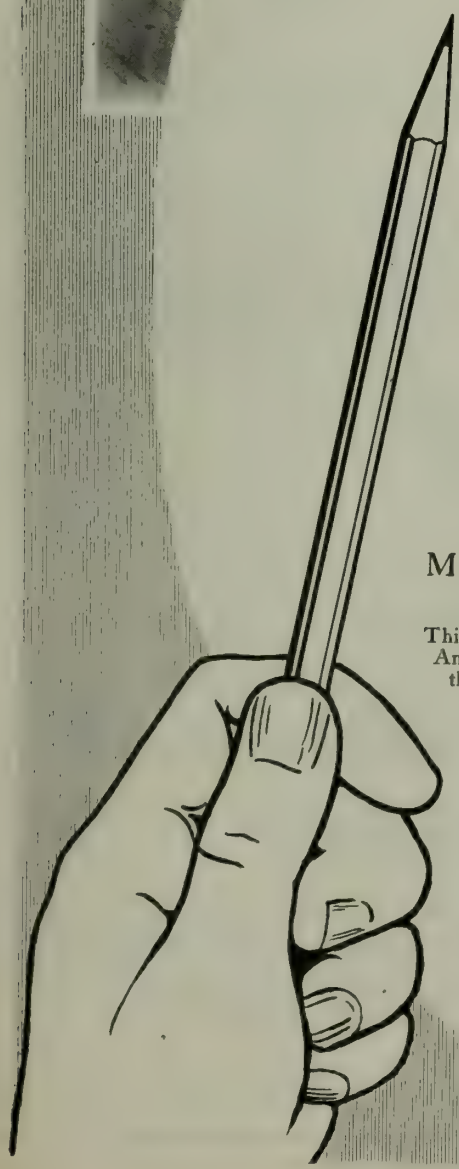
Reputation—

is built up by recommending and selling goods that give the greatest amount of service and satisfaction.

When you sell an article that is a disappointment you help your competitor because your customers will judge your other goods by that sale, and will go elsewhere for their next purchases.

Make your slogan "quality and service" and you'll surely get the "cream" of the hardware trade, besides high-grade goods do not cost any more to handle, bring you in a large volume of business, decrease your overhead, and increase your profits.

"SPECIAL" SAWSET



MORRILL PRODUCTS ARE THE QUALITY KIND

This is the Sawset that is being used to-day by all progressive carpenters. Any inexperienced person can set a saw with this Sawset as perfectly as the most experienced mechanic.

Send for our catalogue illustrating our complete line of Sawsets, Bench Stops, Nail Pullers, Box Openers, Punches, Seal Presses and Liquid Soap Dispensers.

WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step. It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

"Don't Jump, Dad;
"I won't run over you"

"My new coaster goes like the wind, but I've got great control over it." Here, Mr. Hardware Dealer, is the wagon the boys will worry dad to get as soon as they clap their eyes on it. They'll win out, too, when you show the boy's elder the many exclusive features which go to make the

AUTO WHEEL COASTER

the greatest wheeled toy ever sold to the Canadian trade. Here are a few of the features to remember when showing this new coaster:

Steel Axles (meaning strength)

Roller Bearings (the great speed producer) **Spokes are oval-shaped and mitred at the hub** to give strength where spokes generally break.

Fifth wheel for front bolsters to turn on.

Wheels built like real auto wheels; will stand all kinds of abuse.

The Auto Wheel Coaster is strong, easy running, reliable and attractive in appearance.

Make a hit with the boys of your town by featuring the Auto Wheel Coaster during the Spring and Summer months.

The Canadian Buffalo Sled Company, Limited, of Preston, Ont.

Concave, Brace Head Steel Rake

Weldless Steel Rake, Straight Teeth

PICK THESE FOR FIRST PLACE!

WELLAND VALE RAKES

In our CONCAVE BRACE HEAD STEEL RAKE the head is punched from a solid steel bar. Brace is not welded but drawn from solid steel, making it a one-piece rake, and stronger than any other make on the market.

Our STRAIGHT TOOTH WELDLESS STEEL RAKE is a line of solid steel rakes, perfectly sound and rigid.

The Double Back has several advantages which are readily apparent, such as for levelling off, etc.

Finished with handles of excellent quality, and sells at a remarkably low price.

Note This:

THE MAN WHO DEMANDS A GOOD RAKE CANNOT BE SUPPLIED WITH A MORE SATISFACTORY LINE, and the margin of profit will put more money in your cash drawer.

Write for circulars and full particulars.

"North Star" Dry Cells

will give your trade an overflowing measure of good battery service.

It is the best tonic you can take for picking up your battery trade. The tonic should be taken at once, as there will be an exceptional demand in Western Canada next Spring for dry cells. If you are planning an auto accessory department, include North Star dry cells. If you are not, you will want them anyway, as the demand for them is insistent.

Your jobber will supply them at once.

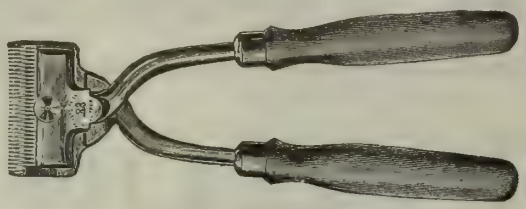
PRIEST'S HORSE and TOILET CLIPPERS

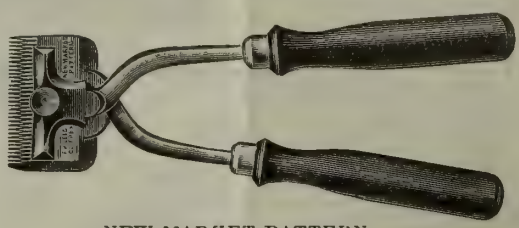
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.

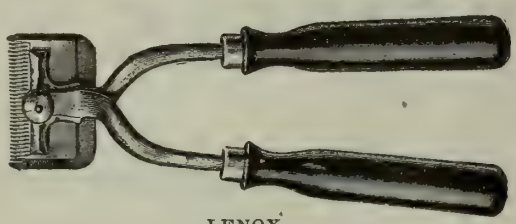
Some styles of hand Horse Clippers are illustrated below. All handles are heavy malleables, with threaded shanks, to keep the wood handles from pulling off. Spring tension on the adjusting nuts insures perfect contact at both ends of the cutting plates. Plates are perfectly ground and designed to cut hair, not break it off by main force.



BALL BEARING
Retailing at about $2.50.

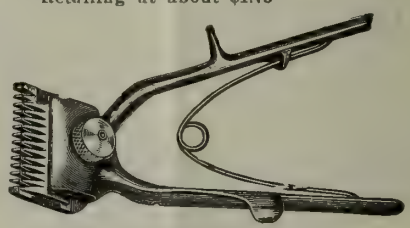


NEW MARKET PATTERN
Retailing at about $1.75



LENOX
Retailing at about $1.50

If you are not familiar with these goods, send for samples and compare them with others.



Hunter, Fetlock and Dog Clipper
Retailing at about $1.50.

—IT WILL GREATLY HELP YOU TO INCREASE YOUR LADDER SALES IF YOU SELL THE

Hercules Step Ladder

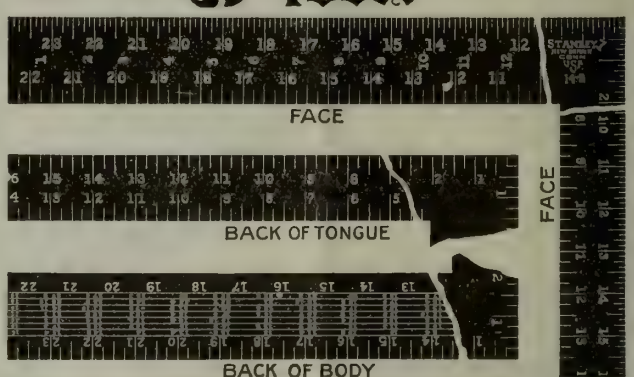
When a man asks for a step ladder show him this illustration—it will at once give him a comprehensive idea of the "Hercules" Strength and you'll make the sale with practically no effort.

The **great strength** of the Hercules is due to the fact that only the very best materials are used and the wide steps and top are strongly trussed.

Write for catalog No. 5 and full information.

The Stratford Mfg. Co., Ltd.
Stratford, Can.

Stanley Tools



Stanley Steel Squares

Every Stanley square is weldless, or, in other words, made from ONE piece of steel, and all four edges are machined. Particular attention is called to the finish of all numbers and the depth and accuracy of the graduation.

Special care has been given to the simplifying of all tables used, so that the workman can get the measurements he desires with ease and rapidity.

They can be furnished in a number of different styles and the variety of finishes offered include Royal Copper, Blued, Nickel Plated, Galvanized and Polished. All Royal Copper and Blued finished Squares have white enamel figures and graduations.

Each Square is packed in an anti-rust wrapper and this stamp STANLEY NEW BRITAIN CONN USA appears on the face of all numbers.

Send for special circular containing complete description.

SELL MORE FILES

For three years we have advertised in every technical trade paper in Canada, educating manufacturers, superintendents, shop foremen and workmen to use more files.

We have demonstrated clearly that it is wasteful to continue using a file when it has reached its "inefficient point."

The result of this campaign has been a tremendous increase in the demand for files, particularly the Famous Five manufactured by us:

KEARNEY & FOOT
GREAT WESTERN
AMERICAN
ARCADE
GLOBE
(Made in Canada)

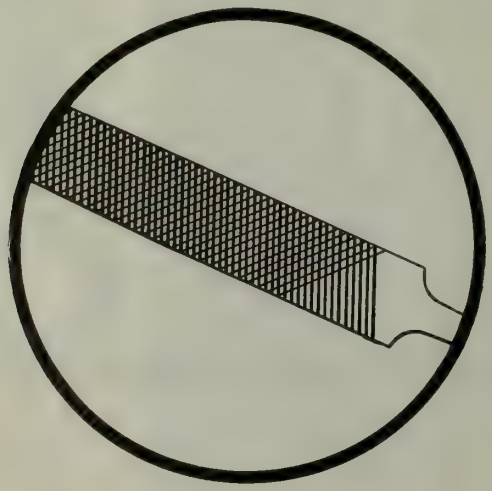
This increase is so great that to-day we supply 90% of the files sold in Canada. Last year we manufactured and sold 60,000,000 files. The dealers who sell the Famous Five turned over this business and made their profit from it.

How much of this business did you get? Did you do 90% of the file business in your locality? If you did not, you're likely missing business by not selling the Famous Five.

We have an interesting proposition to any dealer who wants to increase his file business. We will send him particulars of it if he will write for a copy of "File Filosophy" and our Trade Catalogue.

Nicholson File Company

Port Hope *(Jobbers Everywhere)* **Ontario**



WHY
You Should Sell Our
HOCKEY STICKS, BASEBALL BATS AND HANDLES

They are made in Canada from the selection of the wood to the finished product, experts supervising the manufacturing.

Our hockey sticks are superior to all others in design, material and finish—give them a trial and you will be convinced that this claim has a sound foundation.

Those who buy sticks upon appearance will get quality as well if you sell our brand.

Send us your order to-day—we guarantee satisfaction.

Best Known and Best Liked

ONE vital requirement in building the prestige which makes people turn instinctively to your store is the handling of goods that are well and favorably known.

In rope, Plymouth has more acquaintances and friends than any other. The advertisements written by its makers and the words spoken since 1824 by its users have made it the best known. Superior quality has made it the best liked.

To millions of rope buyers the famous ship trade-mark and the name Plymouth mean satisfaction.

You will find it easiest to sell people rope when you offer them Plymouth Rope.

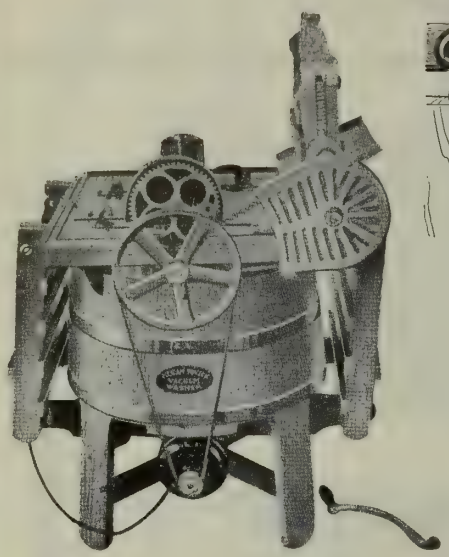
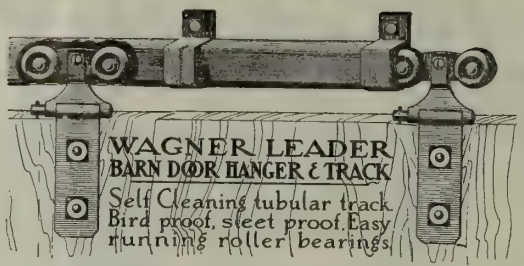
THREE BIG LINES—

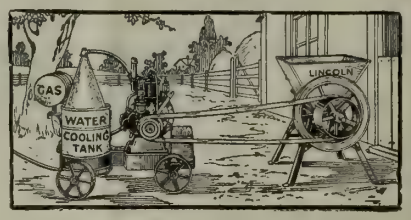




The Wagner Leader is without doubt the best barn door hanger and track on the market, and will be in great demand by the farm trade this year. Send for Wagner catalog.

One of the "KLEAN KWICK" lines of washing machines. Can be run with gas engine, or the wringer and machine can both be operated by hand. It is quiet in operation, and all the working parts are guarded. Produces twice the action of any machine with valve in stomper. Very simple gear construction.

Famous Cushman Light Weight Engines



We want you to handle our 4 h.p. Cushman binder engine. Its light weight and steady power permit it to be attached to rear of binder, etc. With a Cushman you can cut from 8 to 10 acres more and with fewer horses. If in heavy or tangled grain, and the sickle chokes, all they need to do is to stop the team; the engine clears the sickle. Binder runs the same, whether horses go fast or slow or stop. Binder will wear several years longer, as it is not jerked faster and slower by the horses. Attachments furnished for any binder.

2-Cylinder Engines built in 8 H.P., 15 H.P. and 20 H.P. sizes.

ONTARIO

To the Hardware Dealers of Ontario

DO you know that right in our own province hundreds of people are writing to us for information in regard to our HORSE SPECIALTIES and in most cases they even ask where they can procure them. Wherever it is possible to do so we refer them to their nearest dealer or perhaps give them the name of two or three dealers in their locality.

Have you samples of the different lines on hand to show when they call?

Are you keeping your goods well displayed?

Would you like a Window Transfer of our Agency sign to connect your store up with our general Publicity Campaign?

To show you the interest that is being created amongst the farmers of Ontario, we are showing below a copy of a recent ad. run in leading farm journals and a few of the replies. Glance over them. It is just possible that you may even know some of the parties.

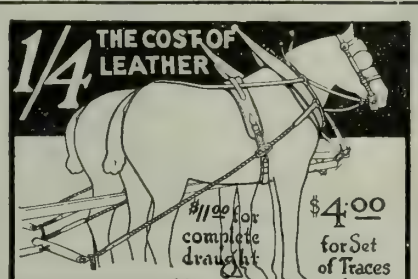
Martin Kohler.

Bruce Mines.
Please send me descriptive Book let of your Harness and Halters.
Leslie Mills.



You can figure this up on your spring overhauling of heavy work harness. GRIFFITH'S Giant Rope Traces stand between you and the big jump in leather—and they are stronger. Your complete draught at $11! It's like finding $10 or $12. Giant Traces at $4! Complete with malleable ends and electric-weld heel chains, and all charges paid ($4.50 west of Fort William).

GRIFFITH'S GIANT ROPE TRACE

Have your dealer show you these outfits. If he hasn't any in stock, write us. But make sure you get them. Mention this paper and we will send you a list of other money savers. **G. L. GRIFFITH & SON, 72 Waterloo St., Stratford.**

THIS IS ONE of a series of Ads. that are running at the present time in a list of Nine of the Leading Farm Journals of Canada. We are referring to replies from Ontario only in this issue. The opportunities in SASKATCHEWAN will be dealt with next week. Watch for it. Saskatchewan dealers. We have a bunch of live news already, and more coming in every mail.

ORDERS

Bruce Mines, Ont.
Enclosed find one dollar for which send me one of your Giant Halters.
Leslie Mills.

P.S.—This halter is for a young colt that is to be tied up for the first time.

Sent from Factory.

Palermo, Ont.
Please send me one of your Handy Tie Ropes, for which I enclose 25 cents.
R. Kelly.

Sent from Factory.

Exeter, Ont.
Please send C.O.D. one set of your Giant Traces and equipment.
Jonothan Kydd.

Turned over to dealer in Exeter.

Barrie Island, Manitoulin.
I am enclosing six dollars for six of your Giant Halters. Sent by express to .....
Albert E. Long.

Sent direct from Factory. Credit note for the profit sent to our dealer at Gore Bay.

TESTIMONIALS

R.R. 2, Kirkfield, Ont.
I received the Giant Halter and Tie satisfactorily. I put the Halter on a colt for the first time to-night and it pulled only once. That was enough. It didn't pull any more.
John J. Brentnell.

Beaverton, Ont.
We are pleased to be able to report that your Giant Traces have been highly satisfactory. We have had them in use on our heavy teams in all kinds of work. We find that while they are lighter than leather they are equally good.
Dunrobin Farms.
E. W. Mackay, Mgr.

Acton, Ont.
I like your Handy Tie fine. It is Handy, quick to tie, and never slips.
C. J. Akins.

RESULTS

That Count In Cash

Are you a business producer? Can you get results from your efforts that mean more money? If you are and are ready to consider a plan that will augment your present income from $5.00 to $10.00 a week, you are the man we want to represent us in your district. The more time you have the better the pay.

We need bright, brainy, active, hustling young men as district representatives. We will within the next month make hundreds of appointments—why not write at once and make sure of your district? If you are looking for an increase in wages to take care of your many extra summer needs—our plan provides the money for them without interfering in the least with your regular duties.

Many of our representatives devote an average of four hours each day to looking after our subscription business. These men average anywhere from $10.00 to $20.00 a week. Would an income like this interest you? Write us to-day: we will gladly send you full particulars concerning our plan, without obligating you in the least—simply say, "Show me how to turn my spare time into money."

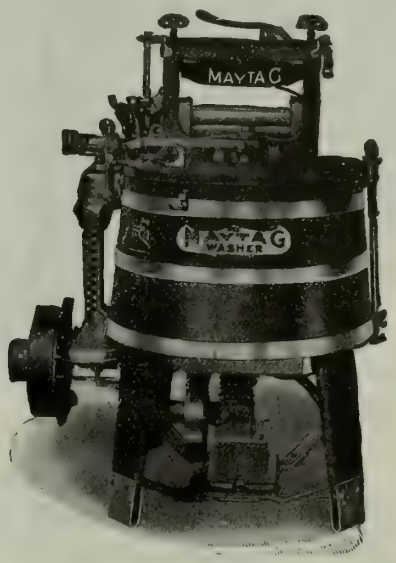
The Maytag Multi-Motor Washer

Announcement Extraordinary!



What the Maytag Multi-Motor Washer Will Do

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU**.

You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST**. This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

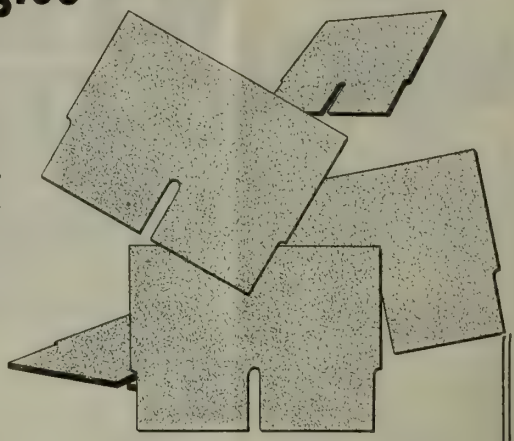
NEPONSET Twin Shingles

The Greatest Roofing Development of the Twentieth Century.



There can be no doubt that Neponset Twin Shingles will be the biggest selling roofing for homes. Everything is in their favor—first, the handsome appearance of the soft green, or dull red, of the crushed slate finish; second, the durability of asphalt-saturated felt, and slate; third, the ease of laying; fourth, the economy in actual service.

Great Dealer Opportunity

Every sale will help you to build up a trade worth while. Link up your store with the whole Neponset line—Neponset Twin Shingles, Neponset Paroid Roofing, Neponset Wall Board and Neponset Roofing Felts and Building Papers. A satisfied customer is not only your best advertisement, but your greatest asset.

Bright Light Stove Polish

Bright Light is prepared from the best English lead and Japan which produces a brilliant lasting polish that will not speck nor turn white. Put up only in our patent box to protect the fingers from coming in contact with the paste.

Every box is hermetically sealed, so that the polish will not dry out. Packed in quarter gross cases.

Our D. S. C. Repair Outfit.

Will repair any inner tube, whether auto or bicycle; always handy; fits the pocket; everything in it of the very best.

Contains:

1 piece of Pure Rubber Patching
1 piece of Sandpaper
1 box of Talcum Powder
1 piece of Adhesive Canvas
1 tube of Eagle Cement

Odorless Jet Enamel

for Stove Pipes

Will not burn off. One coat will give a beautiful ebony finish; dries quickly, and will preserve stove pipes from rusting. Especially adapted for registers, grates or iron where a high finish is required. Put up in six-ounce bottles, handsomely labelled, with cork neatly dipped makes an attractive package. Packed 3 dozen in a case.

Best Harness Oil Dressing

Is a paste combination of Neatsfoot and Wax so blended as to give a waterproof that will keep the leather soft and pliable. Put up in pound tins, handsomely lithographed. Packed three dozen and one dozen wood cases.

Eagle Rubber Cement

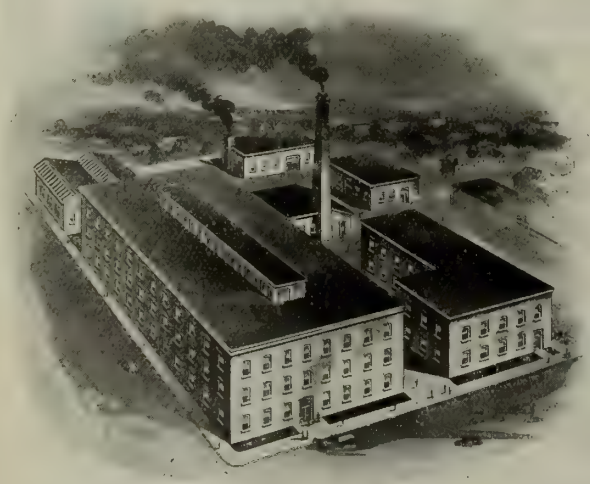
Is recognized by all dealers as being superior to any rubber cement (except our D. R. C. Brand), and is handled by all dealers in such large quantities that we are able to sell it at a price which, considering quality, defies competition. Put up in all styles.

Staon Stove Pipe Enamel

It is a union Japan of extra quality, and is recognized as being superior to any other union Japan on the market. Staon will stand a high temperature, dries quickly, and has no offensive odor. Put up in air-tight tins in three sizes. Labelled with a three-colored varnish label. Packed three dozen to a case.

Staon Stove Paste

Is a compound made from pure Ceylon lead, gives an excellent black shine that will stand over eight hundred degrees of heat without burning off. Put up in penny lever tins, straight sided, so that the polish may be removed very easily without waste. Attractive package, three-color lithographed varnish label. Packed 3 dozen in wood case.



Domestic Specialty Company, Limited

Hamilton, Canada

If interested, tear out this page and keep with letters to be answered.

Ideal Silver Cream

It will clean more silverware in less time, with less expense, than any other preparation made. "Ideal" is not an electro-plating preparation; removes nothing but the dirt, leaving the silverware like new. Put up in eight and eighteen-ounce bottles, packed three dozen in case.

Satin Gloss Harness Dressing

A self-shining dressing of exceptional quality for use in finishing new and old harness, and also the best dressing for general use. It is the blackest and produces a beautiful soft, satin gloss finish, for buggy tops, saddles, fly nets, trappings, etc. Especially adapted for bench work. Put up in cans, kegs and barrels.

Very Best Stove Pipe Enamel

It's a Union Japan and is superior to any stove pipe varnish where quality, quantity and price are taken into consideration. Put up in half-pint and pint bottles, with cop and brush.

RE-NU-AL Wood Polish is not a varnish nor does it leave any coating on the surface, merely removes the dirt and brings the original finish back to the varnish. Removes scratches or burnt spots and will clean any varnished wood-work from the cellar to the attic better and with less labor than any other preparation.

When it comes to *Blacking Enamels and Rubber Cement* you cannot make a better step than buying from us. We say this with confidence because our goods have always given the best of satisfaction, and they pay a very substantial profit.

Send us a trial order now.

Klondike Metal Polish

The Monarch of all polishes; imparts a brilliancy to all kinds of metal. It will clean quicker and leave a brighter finish than any other. Made in black and white.

Canada's Only Weekly Hardware Paper

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 30 TORONTO, MARCH 25, 1916 No. 13

Advance in White Lead Was Predicted

Advance of $2.25 Per 100 lbs. in the Price of White Lead in Oil Has Gone into Effect —Lead Being Sold to Orient—Lead Production in Canada—Imports and Exports for 1915.

THE sensational advance this week of $2.2 per 100 pounds in the price of white lead in oil, will not come as a surprise to those who have been following Hardware and Metal's weekly market reports.

Week after week, for some time past the pig lead situation has been referred to in the weekly market reports in this paper. Special reference has been made in the paint market reports to the pig lead situation and its effect on white lead in oil.

In the March 4 issue of Hardware and Metal the Montreal weekly report, in announcing an advance of 25c per 100 pounds on white lead in oil, stated in part as follows:—

"On the head of the strong situation in white lead in oil, referred to last week, when it was explained that higher prices were warranted, there has been a further strengthening of the pig market, with the result that an advance of 25c to a ton basis of $10.55 has been forced. On the higher basis the market is very firm, and it is stated that the position of pig lead supplies warrants still further advances, despite the decline in the price of linseed oil. However, the volume of business passing is not heavy, and this is a considerable factor in maintaining moderate price levels. An indication of the strength of the market is the fact that even on the advance no orders are being booked, quotations being for immediate acceptance and immediate delivery only. Up to this time orders have been accepted for delivery up to opening of navigation."

The Toronto report on white lead in oil, in the same issue stated:—

"Another advance in white lead in oil has been made, bringing the price up to $11.70 in ton lots. While not altogether unexpected, this last advance has caused some excitement in the trade, as the price is abnormally high, and there is nothing to indicate that the top of the market has been reached. The pig lead situation is very strong, and higher prices may yet develop in that market."

The following week, March 11 issue, Hardware and Metal's Montreal report stated:

"Lead is very strong on the advance recorded last week. Since then there has been still another increase in the quotation for pig. Under these conditions higher prices for lead are warranted. Factors for restraint are that the trade is pretty well bought and the volume of business passing is not heavy and the fact that already the prices are abnormally high. Quotations are on the basis of $11.55 for ton lots, with 30 cents added for smaller quantities and these figures are for immediate acceptance and immediate delivery only. Any activity in demand is likely to lead to immediate advances."

NEW STANDARD LISTS

Owing to the unprecedented conditions in the hardware trade, manufacturers have found it necessary to make alterations in the list prices of many lines on which standard lists apply. All changes in the lists have been recorded in Hardware and Metal's market reports as they occurred. As retailers will no doubt be anxious to secure new and complete set of lists, Hardware and Metal will run a series of standard lists in which changes have been made. The first of the series will start next week. Every retailer should make it a point to file each new list as it appears, and make changes in cost books if they have not already been made. Several cases have recently been brought to light, indicating that retailers have been selling goods at a serious loss due to figuring selling prices from old lists.

The Toronto report in the same issue referring to the strength in the market stated:

"The market is firm at the advance announced last week. Pig lead has again advanced since the new prices for white lead were issued, so manufacturers are confronted with another problem. Indications all point to still higher prices for pig lead, in which case white lead may follow suit. White lead is being quoted locally at $11.70 per 100 lbs. in ton lots, with 30c extra for less than ton lots."

Last week's issue, March 18, stated that unless there was a marked and immediate reaction, higher prices were a certainty. The Montreal report stated in part as follows:

White Lead on the Rise

"Quotations for white lead on a basis of $11.55 for ton lots with 30 cents added for smaller quantities are as at last report. However, the situation has gained further strength on material advances on pig, during the week and, unless there should be some marked and immediate reaction, higher prices are a certainty. In fact it is stated that it is only the fact that there is practically no lead being bought at the present time—orders having been generally booked for spring supplies—coupled with the already abnormal quotations that have deferred an advance during the week."

The Toronto report in the same issue stated as follows:—

White Lead Firm

"The recent advance of pig lead to 7c in New York has increased the possibility of another advance in white lead in the near future. Indications point to continued strength in the pig lead market, and further advances. White lead is being quoted locally at $11.70 per 100 lbs. in ton lots."

This week an advance of $2.25 per 100 pounds has been announced. The price

of pure white lead in oil at the advanced cost in ton lots is $13.80 per 100 pounds at Montreal, and $13.95 per 100 pounds at Toronto.

The price of pure white lead in oil at the outbreak of the war, in ton lots was $8.20 per 100 pounds at Montreal, and $8.35 per 100 pounds at Toronto, an advance of 15 cents per 100 pounds having taken place about a month previous to the outbreak of the war.

The present high price of white is warranted by the present prices of pig lead.

A comparison of pig lead prices in effect early in the present week compared with prices of a year ago at New York and St. Louis is very interesting. The Trust price at New York on Monday was 7.00c as against a price of 4.10c a year ago. The average for a year prior to the war was 4.16. According to the American Metal market, the price at East St. Louis on Monday of this week was 6.92½. The price a year previous was 4.05. The average for a year prior to the war was 4.04.

On account of lack of offerings, and the scarcity of supplies, the lead market has continued to grow stronger each day. Producers, it is claimed, are sold up to their capacity, and are holding tight, refusing to sell ahead to any extent. A peculiar feature of the situation as reported by the American Metal Market is the fact that the greater part of the lead sold of late has been shipped to Seattle and other Pacific ports for export to Japan and Russia. It is said that the demand from the Orient shows no falling off and there were early this week several new orders for March and April shipment on which the buyers bid 7⅞c St. Louis, and sales have been made at 8.00c. As the orders are being placed for shipment via the Pacific and therefore lead which is in the West is worth as much and more than lead which is in New York.

The National Lead Company, a subsidiary of the American Smelting & Refining Company, is understood to have large inquiries for shot, sheets, and other finished products, amounting to about 1,000 tons, but being unable to obtain the pig lead, is hesitating to make offers. It is understood that the parent company is largely oversold and to-day is refusing to make sales at its nominal quotation of 7c per pound for shipment from the West. It is a matter of some interest that pig lead was sold as low at 3.35c per pound in October, 1914, three months after the outbreak of the war. This was the lowest point ever recorded, at least, since 1880. Lead has been slow in responding to large war contracts, but the present indication is that new high record prices are likely to be established.

Lead Production in Canada

The most recent figures available on lead production in Canada are those compiled by the Division of Mineral Resources and Statistics for 1915, a preliminary report of which has recently been issued. The figures for production, while subject to revision are based upon direct returns from mine and smelter operators.

Although there was an increase of nearly 25 per cent. in the production of lead the 1915 output has been exceeded in six of the past 15 years. The production of lead in 1915 was 45,377,065 pounds, which valued at 5.60 cents per pound, the average price of pig lead in Montreal for the year, would be worth $2,541,116. The production in 1914 was 36,337,765 pounds valued at $1,627,568, or an average of 4.479 cents per pound. The 1915 production consists chiefly of pig and manufactured lead produced at Trail, B.C., but includes also an estimate of the lead probably recoverable from ores shipped to smelters outside of Canada. The entire output of the Surprise mine in the Slocan District, B.C., was shipped to the United States, refined in bond, and sold in London.

The exports of lead in ore, etc., in 1915 are recorded by the Customs Department as 1,845,100 pounds valued at $40,273, and of pig lead 2,066,929 pounds valued at $79,067. Exports in 1914 were 246,100 pounds of lead in ore and 510,573 pounds of pig lead.

The total value of the imports of lead and lead products in 1915 was $2,479,261 as against $1,042,538 in 1914.

Do You Quote Prices?

Successful Merchants of To-day Are Those Who Keep no Secrets in This Respect — They Are the Magnets Which Draw Trade—Essentials of Advertising That Brings Results—Some Advertisers Fall Short by a Very Small Margin

ONE of the perplexing questions for many a merchant in the small towns is the advisability of quoting prices in their advertisements. If they quote prices some are of the opinion that they are playing into the hands of their competitors. In other words, they think by letting the other fellow know the price for which they are going to sell that he will immediately put his prices down to a lower point and quietly undersell them. They reason that they lose the sale under these conditions and question the wisdom of letting the other fellow know too much about what they are doing.

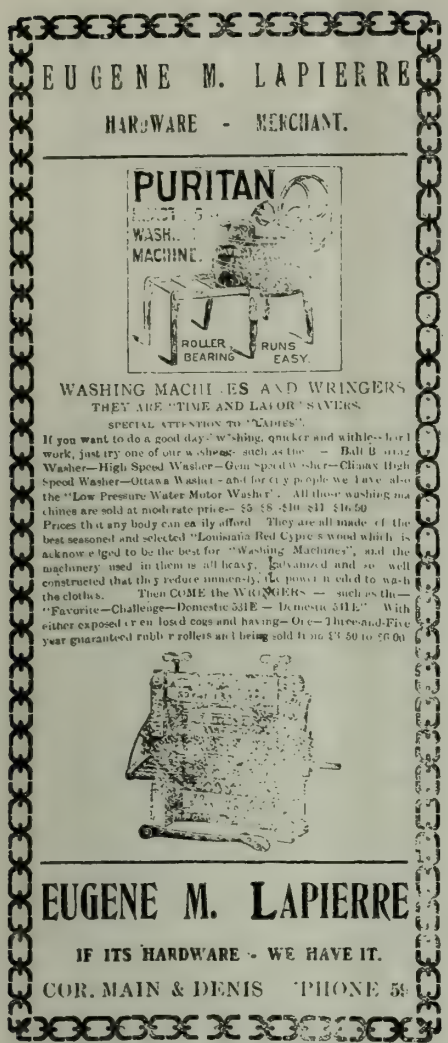
Yes, it is true the merchant in quoting prices, lets his competitor know where he stands. But at the same time he is also letting several hundred prospective customers know. If his price is a fair one he has no need to fear that his competitor is going to jump at the chance of underselling just for the sake of making the sale. The chances are that where a merchant would lose one sale by quoting his prices he would gain ten customers by such methods. It is the fear of dragging their business methods into the limelight that makes many merchants draw back and go on advertising in the same old way: "Our prices are right. See our new stock of hardware. Come to us and we will save you money."

Leaders in the art of getting business have found that sort of talk does not get them anywhere. If it is a bad principle to quote prices, would it also not hold good in the case of the department stores? Quoting of prices is one of their strong points. They are the magnets which attract the gaze of the purchaser whose purse is burning from the weight of the weekly pay.

But prices must be backed up by something that tells what they can expect for a certain price. This is the method by which the big advertiser leads the wary one to water. It is of course another thing to make that wary one buy after he or she is corralled and safely in the store. But it is a great deal easier to sell an article when they know the price and all the details than if the curiosity had never been whetted in the least.

Ads That Get Trade

Every merchant looks with longing eyes to the advertisements of the successful city merchant who "puts his ads. across the footlights" and makes them get trade. There is one perpetual



Example of an advertisement which has some good features, but which falls short in the essentials which make for business-getting publicity. It is attractive. But presswork is poor, there is no attractive headline and prices are referred to in a general way.

question mark in his mind: How does he do it? These articles are designed with a view to assisting the merchant to see how he does it. By practical illustrations from advertisements that have appeared in various papers throughout the country this end is sought. Last week there was pointed out the necessity of telling in detail about the goods, quoting prices, and of the advantage in having the advertisements well illustrated. The very great need for an attractive typographical arrangement, the proper distribution of white space and the very desirous element of "punch" was also emphasized. There must be an intimate appeal—an appeal to reason to clinch the arguments made.

This week reproduced herewith are two interesting advertisements on wringers. One is an example of the advertisement which almost "made the grade" but "fell down" in the vital points. The other is an advertisement from a successful hardware advertisement of a department store which "made the grade" and got the business. No more eloquent talk could be made than to show the methods by which each worked. The advertisement of Eugene M. Lapierre has a number of the essentials of good advertising.

From a typographical standpoint it is rather attractive. This was possibly due more to the blind gropings of the "printer's devil" who was trying out his hand at artistic display than to the mature and studied arrangement of the typo's art. However, that is mere supposition. The fact remains that the advertisement does attract. Two of the points which make the advertisement attractive are the cuts of the washer and the wringer, with a good distribution of white space. There is possibly just a trifle too much white space at either side of the cuts. But that is neither here nor there. The advertisement is commendable, too, from the point of quoting prices. There is some attempt made also to tell about the washer and wringer in detail.

Weak Points of Washing Machine Ad.

One of the faults which may be pointed out is the poor presswork. A merchant should insist that his advertisement come out clear and distinct. In both cuts in the Lapierre ad. the presswork is so bad that some parts cannot be deciphered. This is quite a common complaint among newspapers in small towns. It is one of the points on which the large city daily lays particular stress. The merchant can exercise the proper kind of pressure to remedy this condition. It is not necessary for him to have a row over it with the country editor. But he should in a friendly manner point out the necessity of having good presswork — printing that the subscribers can read. A heart to heart talk with the editor will do a great deal of good and possibly result in his raising the typographical appearance of his paper from front through to the back page.

This matter of poor presswork is perhaps the glaring weak point from the standpoint of the editor. There are other faults which must be attributed to the merchant. In the first place he has been too anxious to get his name before the public. It is his goods that he wants to get before the public—as well as his name. His name appears no less than twice — at top and bottom. It would have been advisable to cut out the top name and insert a line what would tell in a few brief words what the merchant wanted to "put across." A line such as "Time and Labor Saving Washers and Wringers" would attract the eye and make an appeal to the housewife.

Glittering Generalities

In the text of the advertisement all the various kinds of wringers have been named and the range of prices given. But the price is not tied down to any particular make. The prices given might have been the complete range of prices for all the washers or they may have been the range of prices for each particular make. The advertisement does not tell which. The essentials of good advertising require that the price should be nailed down to the particular make or brand to which they apply. In the reproduction of the mills advertisement a good illustration of this point can be had.

This same defect is noticeable when the wringers are enumerated. A string of wringers is given, then the prices are bunched together. One cannot get a mental picture of any one of the wringers and the price attached to it. Note

(Continued on page 35.)

Example of an advertisement which pulled business. There is a good distribution of white space, an attractive typographical arrangement, each machine is minutely described, and the prices are quoted. This advertisement was the same size as the Lapierre ad, ten and a half inches deep across two columns.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, MARCH 25, 1916 No. 19

EDITORIAL NOTES

THE financial statement is essential in the relationship between creditor and debtor.

* * *

CUTTING prices is certainly a queer way of increasing profits and yet it is generally resorted to with that end in view.

* * *

DESPITE the warnings of the trade papers there are still some retailers who allow themselves to be taken in by schemes which are prohibited by law, and by which the retailer is eventually the loser, not only in actual cash, but by making dissatisfied customers.

* * *

ONE of the greatest troubles of the retail trade has been a misunderstanding of the word "competition." It has occurred to a few that the word could mean something else besides "price"—that there could be such a thing as competition in service, in quality, in suggestion, in originality; but to the great body of merchants, both large and small, it has meant only "price."

MINERAL PRODUCTION INCREASED

ACCORDING to the official annual preliminary report on mineral production in Canada, which however, is subject to revision, it is evident that the metal mining industry has, in 1915, shown the largest output on record. The total value of metal and mineral production in 1915, was $138,513,750, compared with $128,863,075 in 1914 and $145,634,812 in 1913, the latter being the greatest production on record. The increase of 1915 over 1914 was $9,650,675. The heavy demand for metals, as a result of the war, created activity in the production of copper, lead, nickel and zinc. Developed deposits of these metals were worked harder during 1915, than in previous years, and late in the year the opening of old, and exploitation of new deposits.

The production of all metals with the exception of silver shows a huge increase over previous years. The total value of metallic production in 1915 was $77,046,082, as against $59,386,619 in 1914 and $66,361,351 in 1913. The increase over 1914 was almost 30 per cent., and 15 per cent. over 1913, the highest previous year. The quantity of nickel was 50 per cent. greater than in 1914; copper, 35 per cent. greater; pig iron 17 per cent. greater; lead, 25 per cent. greater; gold, 18 per cent.

Complete returns of zinc shipments have not yet been received but the tonnage is estimated at 15,553 tons containing 12,400,000 pounds of zinc. Zinc shipments in 1914 were recorded as 10,893 tons containing 12,400,000 lbs. of zinc. Despite the prevailing opinion in some quarters to the contrary, and although there was an increase of 25 per cent. over 1914, the 1915 output of lead has been exceeded in six of the past fifteen years. The production of lead in 1915 was 45,377,065 pounds. Valued at 5.60 cents per pound, the average price of pig lead in Montreal for the year, the production of 1915 was valued at $2,541,116. The 1915 production consisted principally of pig and manufactured lead produced at Trail, B.C.

The demand and high prices for antimony in 1915 caused a renewal of activity in mining antimony ores, with the result that the total production reported is estimated at 961,040 pounds of antimony refined and in concentrates. The 1915 output of pig iron from Canadian blast furnaces shows an increase of 130,555 tons or 16.67 per cent. over that of 1914. This compares favorably with the averages of recent years. The production of steel ingots and castings in 1915 including 5,625 tons from electric furnaces, was 1,020,335 short tons as compared with 828,641 tons in 1914.

The value of the non-metallic production in 1915 including clay and quarry products was $61,467,668 compared with $69,476,456 in 1914, and $79,273,461 in 1913.

The largest decreases in 1915 occurred despite the decreased production of materials used in construction work such as cement, clay and stone quarry products, a large increase is shown in the total mineral output over that of any previous year.

WASTEFUL RECRUITING

WITH 280,000 men from Canada already enlisted, the problem of bringing the forces of the Dominion up to the half-million mark presents serious difficulties for the industrial life of the country. There is no question but what the men can be had. With a systematic campaign such as is now being carried on the men can be recruited. The appeal to the young men of the country is just as strong as it ever was. With the coming of spring and summer large numbers will undoubtedly fall in.

But it is a question whether the present methods can be followed in the raising of the additional 220,000 men without seriously interfering with the industrial progress of Canada. It has been stated that it is the most competent men in all branches of industry who have enlisted in the past. Men with competent brains see the urgency of the present call. The dilatory man puts it off. The man keenly alive to the situation consequently hearkens to the call. Many there are who feel that they would like to go but because of conflicting interests find they cannot. Very often, under the present voluntary method of recruiting, they do don the uniform in spite of the sacrifices.

It is not a time when it should be said that the fight belongs to one particular class of men rather than to another. All are equally concerned in the issue. We want to win. We will win—even though it is necessary to strip the men from every productive industry in the country.

But it would not be necessary to cripple our industries if we went about the job in a methodical and businesslike manner. Under the present system when the recruiting sergeant is turned loose he does not stop to consider whether the man would be more valuable where he is. He will clean out the entire force of an industrial plant and close its doors if need be. "It's men we want. Give us men," the sergeant asserts.

Some plants have been closed. Others are working in a very feeble sort of way. In certain instances, proprietors have had to face the possibility of disposing of their plants or closing them up. The same condition no doubt prevails in many industries.

It is not because there is a dearth of men in the country that these shortages have occurred. It is because men have been left free to make the choice. The highly skilled have joined the colors in large numbers. There are many callings which do not require years of work to become proficient in. These could be filled by women and girls and older men.

The question arises: Who shall go and who shall remain? And who shall name the classes to go? The first step should be the taking of a census with all data as to trades and callings, marital relations, ages, where employed. It should then be possible for a competent tribunal to select the classes that should first be requested to perform service for the State. This tribunal should be comprised in part at least of business men who are familiar with the needs of particular industries.

No odium or stigma should attach to men so called or to those left at home. Thrice honored are they who put themselves completely to the service of the State. "Sweet and beautiful it is to serve one's fellowmen." By the fortune of chance, it may be, certain classes can be spared first.

By proper organization, either through Dominion, Provincial or voluntary aggregations of citizens, a complete census could be taken in every city, hamlet and countryside in the Dominion. To conserve our national resources in skilled men a census is a very necessary step. The next step should be a decision by a proper tribunal as to which classes could be spared first.

CLEAN ADVERTISING

IT IS worth something to know that advertisements which are inserted in a trade paper are clean and dependable. In the United States there is an organization known as the Association of National Advertisers which makes it a principle to ask publishers to declare themselves with respect to certain questionable classes of advertising. For instance, there are the advertisements for cancer cure, men specialists, fortune-telling, advertisements of real estate and financial concerns that one would personally consider questionable, matrimonial bureaus, liquor advertisements and other classes of advertising which might gull the public.

In the case of very many of the newspapers they have been unable to answer these questions in a creditable manner. There are numerous forms of advertising which get into the trade paper that would gull its readers if careful scrutiny and selection were not exercised. It is one of the business principles of HARDWARE AND METAL to exercise the greatest care possible in safeguarding its readers. It is our settled business policy never to solicit advertising from a source that may be at all questionable. Furthermore, on our advertising contracts we always reserve the right to cancel an advertisement. This is done in case it turns out that the firm carrying the advertising is not all that we had expected it to be.

Merchants who have occasion to peruse the advertising pages of this paper can feel assured that the greatest of care has been exercised on their behalf in this process of selection. It is our aim to make our advertising of the most reputable and trustworthy kind. Many advertisements have been rejected because we have felt that they might be of the questionable sort.

Counter Check Book In Triplicate

Problem for Merchant is to Get Simple and Efficient System—One Merchant Combines Invoice, Journal and Counter Check-Book All in One—Chances for Making Mistakes Reduced to Minimum

THERE are many systems of bookkeping in vogue in the various hardware stores in Canada. It is a difficult problem to decide on the best method to keep account of sales and at the same time keep these records in the permanent set of books of the merchant. There are many loose leaf systems now being used by hardwaremen and these have been found to give satisfaction quite generally. But even in these loose leaf systems it is necessary to exercise care in the selecting of a system in order that the new system may not be as cumbersome and as expensive as the old.

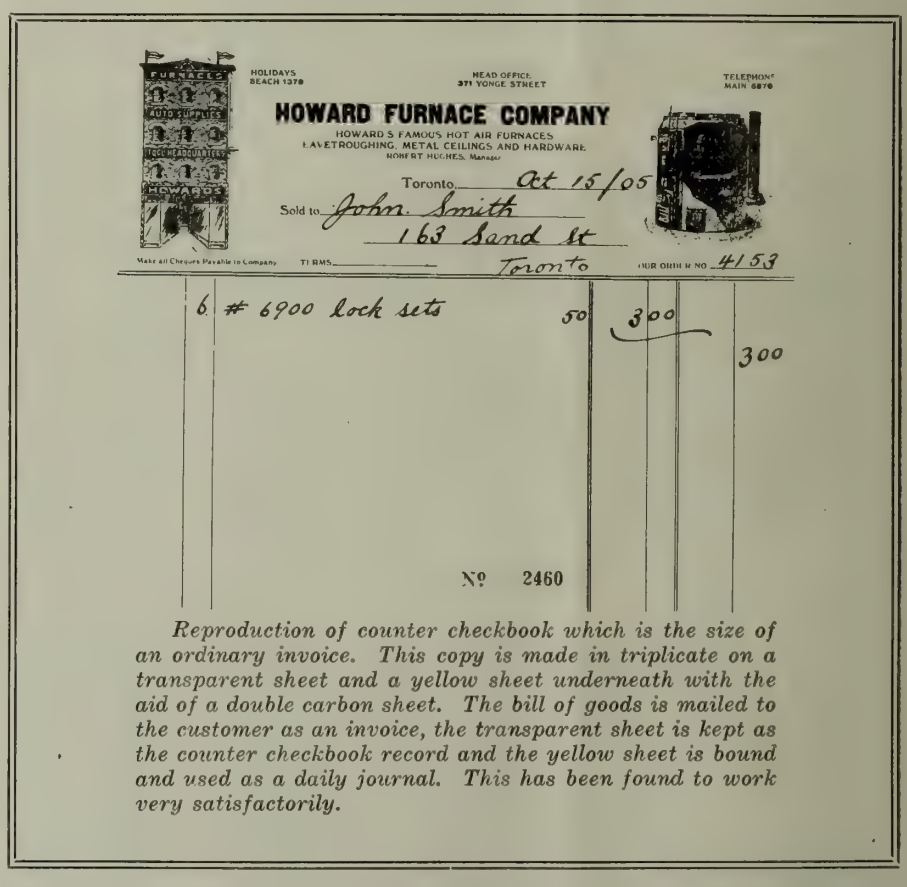
Some of the essentials of a good system of keeping a record of sales and accounts are: (1) Simplicity; (2) Efficiency; (3) Infallibility through proper checks; (4) Minimum cost. Many of these systems are inexpensive to instal and should be considered thoroughly by the merchant who is not satisfied with the methods he is using at present. There are many systems still used which are complicated, unsatisfactory and troublesome. They incur an expense which the hardwareman would be well to be relieved from.

One of the Toronto firms which about two years ago discarded its old system was that of the Howard Furnace Company. In considering a new system the secretary-treasurer of the concern, W. K. Hughes, had in mind the eliminating of inconvenience to his customers. In this way he believed customers could be attracted to deal with his firm. Through its simplicity and efficiency he hoped to have the system appreciated by his customers.

In the second place, one of the objects in view was to keep the system of bookkeeping up-to-date without incurring too much expense through taking up too much time of the salesman. Thirdly, to have some system that would not increase the work of the office staff and bookkeeper. After a trial of two years, Mr. Hughes asserts that his present system has not only reduced the expense in his office work, but has made the work easier for his salesmen. Furthermore, it has eliminated all the troubles which he formerly experienced.

A Simple System

The various forms and books required by the Howard Furnace Company are three in number, namely, the counter check book, the ledger and the monthly statement. The counter check book is of fairly large size, the sheets being 7 inches by 10 inches. It is about the size of an ordinary invoice. Mr. Hughes maintains there are several advantages in having the counter check book of a good size. First, the book is not so liable to be mislaid by the salesman, and if it does happen to be mislaid, it is large enough to be easily found; second, if a customer takes the bill with him for the goods purchased, he is not so liable to fold a sheet of the size in question into small dimensions and tuck it away in a corner of his match pocket. Mr. Hughes has observed that the customer usually folds the sheets into a size similar to that of an ordinary letter. It cannot, therefore, be overlooked by the customer if he uses his pockets for other purposes as well as keeping bills.



Reproduction of counter checkbook which is the size of an ordinary invoice. This copy is made in triplicate on a transparent sheet and a yellow sheet underneath with the aid of a double carbon sheet. The bill of goods is mailed to the customer as an invoice, the transparent sheet is kept as the counter checkbook record and the yellow sheet is bound and used as a daily journal. This has been found to work very satisfactorily.

Counter Check Book

The counter check book is arranged in triplicate form, composed of a white sheet of good quality, preferably a bond paper, which is the one on which the item is written. Underneath the white sheet and forming one of the set of three is a sheet of transparent paper, in an onion skin grade of paper. The third sheet in the trilogy is a yellow one. The second sheet, or transparent one, is perfectly blank, with the exception of the number of the counter check book and the sheet number in the counter check book. All three sheets carry the same numbers. The third sheet, yellow in color, is an exact duplicate of the white sheet on which the item or account is first written when the sale is made.

All three of these sheets are made out for the one sale. The second and third sheets are copied by the use of a double-faced carbon paper, inserted between the transparent sheet and the yellow sheet. When pressure is made on the white sheet with the lead pencil the impression is also made on the yellow sheet as well as on the reverse side of the transparent sheet. The double carbon does away with the necessity for using two carbons and the possibility of losing one or failing to have it in its place.

When the sale is made, the clerk tears the white sheet and yellow sheet from the check book and places them in a compartment in the cash register used for this purpose. The charge is then rung on the cash register. Mr. Hughes does not encourage the giving of original invoices to the employees of concerns who may be purchasing the goods. When a person having a private account requires a bill with the goods the request is usually granted. If the request is not made the salesman does not mention it, and does not volunteer to give the invoice.

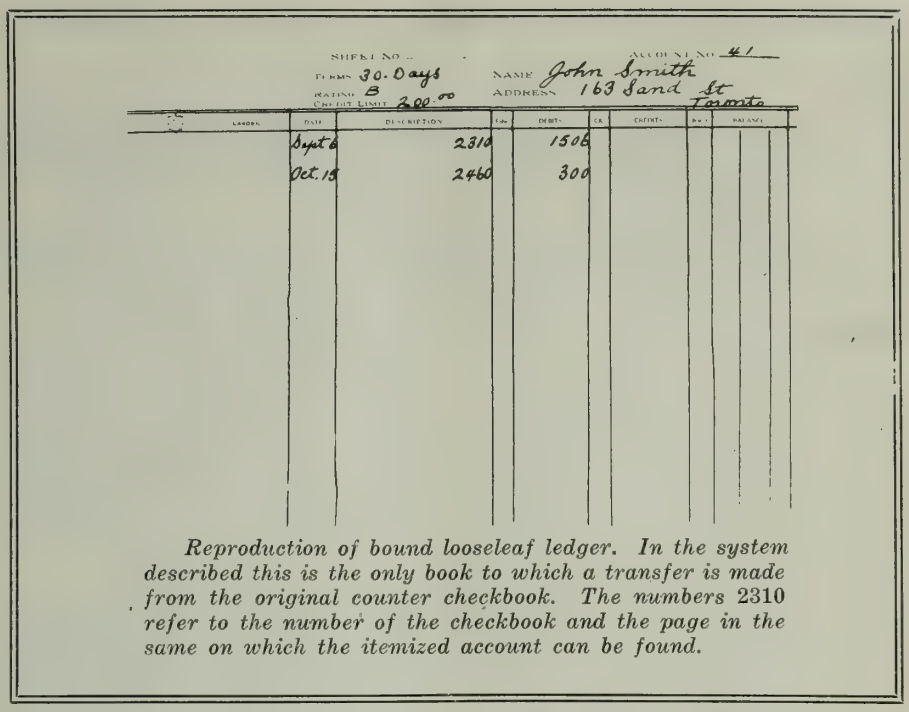
Invoices Sent by Mail

This firm discourages giving the invoices with the goods, for the reason that they do not stand the same chance of getting into the hands of the proper parties. The original invoice is mailed to the firm each morning, and will thus get into the hands of the person who is sure to see that it is filed away properly. When the statement is rendered at the end of the month the items will correspond with the invoices. All chance of having to telephone to find out what such and such an item was for is thus eliminated.

Orders signed by the proper officials of a company are demanded by this concern when filling orders for their messengers. The salesman then insists that the messenger sign for the goods in the counter check book before the leaves are torn therefrom. The order for the goods is also preserved.

When business for the day is over, the bookkeeper takes the white and yellow sheets from the cash register and deposits them in the safe over night. In the morning the white sheets are mailed to the customer. These sheets show the items, signature of the employee who received the goods and the order number of the firm making the purchase. The yellow sheets are filed numerically into a binder, thus forming a journal. The regular form of entry is then made into the ledger from the binder.

The folio number entered in the ledger is the number of the entry in the counter check book. In the specimen sheet, reproduced herewith, it is 2460. As already stated, the 24 represents the number of the counter check book, while the 60 represents the number in the counter check book. In making entry from the binder to the ledger it is claimed there is a big saving of time. The bookkeeper has no entry to make in the journal, as the journal is already made. Also there are no invoices to be made out, as the white sheet mailed to the customer was the invoice. The firm which has this system asserts that the chances for making a mistake are reduced to a minimum. It often happens that errors are made in the copying of invoices. In this system the invoice is the original bill. There is only one transfer, that from the yellow binder sheets to the ledger, which reduces the chance of making mistakes to the minimum.



SHEET NO. —
ACCOUNT NO. 41
TERMS 30. Days
NAME John Smith
RATING B
CREDIT LIMIT 300.00
ADDRESS 163 Sand St Toronto

LEDGER	DATE	DESCRIPTION	FOL.	DEBIT	CR.	CREDIT	BAL.	BALANCE
	Sept 6		2310	150 6				
	Oct. 15		2460	300				

Reproduction of bound looseleaf ledger. In the system described this is the only book to which a transfer is made from the original counter checkbook. The numbers 2310 *refer to the number of the checkbook and the page in the same on which the itemized account can be found.*

On the ledger sheet there are reserved spaces for the rating of each customer, his credit limit and the terms to be given. The sheet number comprises the number of sheets in the account. On the first day of each month statements are rendered on regular forms.

This system, Mr. Hughes states, has worked out to the entire satisfaction of the company in question. It has not alone saved valuable time for them, but has reduced the chances for making mistakes to the minimum, and gives their customers confidence in their method of conducting business.

NEW BRUSH MACHINE PLANT

Another plant has been established in Canada as a result of the increased demand for brushes of various kinds. The Canadian Brush Machinery Company, Limited, has recently been granted a Dominion charter and will establish a factory at Walkerville for the manufacture of these machines. The company has acquired the Canadian and British patents of the Liebig Solid Back Brush Machines, manufactured by William Liebig & Co., of Detroit, Mich. Brush manufacturers in Canada have purchased over $20,000 worth of these machines during the past eighteen months to turn out large military orders for these articles. The factory for the manufacture of these machines is the first to be established in Canada. The company intends to look well to the export department of their trade as well as to the local market in Canada.

PROGRESS OF CREDIT MEN

At a banquet given in his honor by the Hamilton branch of Credit Mens' Association of Canada, Henry Detchon, general manager of the association, with headquarters at Winnipeg, told of the great progress the organization has made in the West. The association has high ideals and strives to maintain them. In his opinion the interests of the wholesale and retail merchants were identical. Nearly every wholesale house west of Port Arthur, said Mr. Detchon, was a member of the association. Through its efforts some very important protective legislation had been effected in the West. One of the projects which the organization had favored was the daylight saving scheme. Mr. Detchon also visited Toronto and Montreal on his Eastern trip.

BRASS COMPANY CHANGES NAME

Notices have been issued to the effect that the name of the Chadwick Brass Company, Limited, at Hamilton, has been changed to The Wentworth Brass Company, Limited. The firm founders, spins, stamps and manufactures brass and copper goods, electric and gas fixtures, automobile lamps and art metal ware.

That there is a fortune awaiting the man who can invent a motor for automobiles that will consume illuminating or heavier oils of which the supply is excessive, or who can make a competitive substitute for gasoline, is an opinion expressed by the New York Commercial in commenting upon the recent rapid advances in the gasoline market.

WHAT OTHER PAPERS SAY

REASONS FOR BUYING AT HOME

From the Guide, Killarney, Man.

While we recognize the perfect right of every man to buy where he pleases and how he pleases, even to the complete exclusion of the home dealer, we question very much the wisdom of his doing so. We may be wrong, for it is a question which every man must solve for himself. However, here are five reasons why we think you should patronize home dealers when possible. Read them, investigate, and use your own judgment:

(1) Considering quality, freight and service, home prices are as low or lower than mail order prices, statements by mail-order houses to the contrary notwithstanding. The mail order house attracts business through playing upon man's weakness to look upon distant fields as greener than those at home.

(2) Home merchants are in a position to render incomparably better service than distant houses, and they do give such service. This is true because, one who buys of a home merchant may see the goods in person, discuss merits of articles and have other privileges that are not possible when he deals with a mail order house.

(3) By the nature of things, one may rely upon home merchants more than upon distant mail order houses. This because the home merchants meet their patrons face to face and have to make good. If a bad purchase is made it will be brought back or a personal complaint made. The mail order house is virtually free from such trouble. You know what that means.

(4) The home merchant is in position to extend credit accommodations and is generous and courteous in doing so; not so the mail order house. In this country, where men and money are both busy, credit accommodations mean much. The home merchant is your friend when you are in need, and he is at least entitled to fair treatment when you have cash to spend.

(5) The interests of country people and of home merchants are identical, and self-interest calls for patronizing such stores.

URGES RETAILERS TO ORGANIZE

From the Advertiser, Claresholm, Alta.

We hope the merchants of Claresholm, Granum and Stavely will carefully read an article in this issue under the heading, "Country Merchants Organizing." This is the movement that ought to be taken up by every town in the west. The business men must organize if they would successfully compete with the departmental store. They must work out their own salvation in this matter. Far too much money is sent out of Alberta to fatten eastern business houses. This money should be kept at home, and will be kept at home, if the merchant himself has nerve enough to tackle the problem with determination and energy. There is too much apathy and indifference on this subject; too much willingness to let things slide and take the leavings from the department store table. Every merchant should resolve that he will hold the trade of his own district and make his business a success. No man with a particle of pride or self-respect is willing to be a door mat for another man to wipe his feet on, yet this will happen if he does not assert his manhood and prove by his actions that he can hold his own, if not in one way then in another. If by organizing, the country merchant can drive a peg in the coffin of the department store, then organize by all means and do it quickly.

NARROW BUSINESS

From Telegraph and Telephone Age

When a business is conducted along narrow lines the employes naturally become narrow in their views; in other words, they reflect the spirit of the business. Conversely, a business conducted on broad gauge principles tends to make its employes broad-minded, and widen their mental horizon. Modern business methods are destructive of narrow ideas, and any business that is classed as old-fashioned and narrow will sooner or later fail.

COMPARISON OF PRICES

From Merchants' Record and Show Window.

Much fuss has been made during the past year or so as to the ethics of comparative prices in advertisements. Because some advertisers have abused the use of comparative prices, other stores have discontinued their use. We can see no very good reason why any advertiser should not make comparisons of former and present prices, providing it is done honestly. It is the truth that counts.

IT CAN BE DONE

From the Hardware Trade

No community is too small and none is too large to derive benefit from the formation of a local credit bureau.

As a matter of fact, the large communities almost without exception have such organizations.

Every manufacturing and wholesale house maintains a credit department with a highly salaried and competent man in charge.

There is to be noted a constantly growing interest in this matter. Several towns in the Northwest have local credit bureaus which have proven their worth to the subscribers several times over.

The benefits of such local organizations are many. Among the most prominent may be mentioned the fact that they enable merchants to extend credit with more discrimination and in a more intelligent manner; aid materially in the collection of accounts of long standing; help reduce the number of slow pay and dead beat customers; and, finally, foster a spirit of co-operation and community development among the merchants.

These few advantages, added to the many others which might be mentioned, would seem to show the necessity of a credit bureau in every town and city in the Northwest.

A little active work on the part of a few interested merchants in each town in sounding sentiment, then co-operating with a man who understands the ins and outs of such organiations, is not a difficult matter.

There is one particular plan which is simple, efficient, low in cost, and adaptable to all sized towns. The use of such a plan will prove of benefit to every community.

DO WE WANT A BANKRUPTCY ACT

From the Credit Men's Journal

Our Association has gone on record as opposing a Bankruptcy Act established along lines where the cost of operating will eat up most of the assets.

Our objections are:

That at the present time we have Assignments Acts in the Provinces, which have worked out fairly satisfactorily, practically the only two objections being that no provision is made for compelling a debtor to assign, and that the Acts in the various provinces are not uniform:

That there would have to be Bankruptcy Courts formed and officers and judges appointed in numerous districts to deal with insolvency matters:

That this would be very cumbersome and expensive in the working out of estates and realization of the assets;

That the fact of every important step having to be approved by the court would retard the winding up of estates. This is amply demonstrated in the Province of Quebec as compared with the prompt handling of estates in other Provinces;

That the fact of having to make these applications to the court would necessitate the employment of solicitors to attend such applications—more expense.

We have submitted to the Minister of Justice that if any change is to be made, we would suggest a National Assignment Act, incorporating the best features of the present Provincial Assignment Acts and having a clause covering applications for compulsory assignments when the debtor has been proved as having committed acts of insolvency and carrying with it the discharge of an honest debtor.

The Chief Justice has been good enough to promise that any proposed Act will be submitted to the Association for our consideration.

EENY MEENY MINY MO!

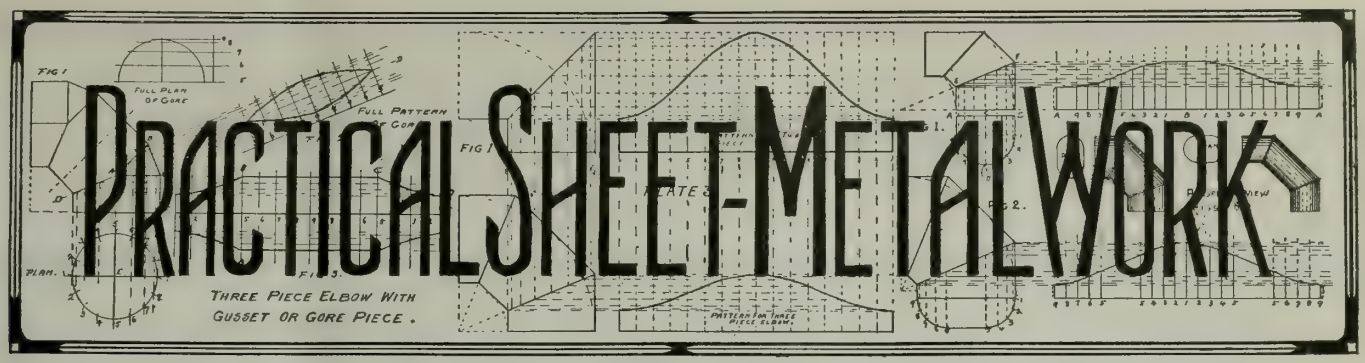
From Industrial Canada

Another month has passed, and still there has been no announcement from Ottawa that would indicate the slightest effort on the Government's part to harmonize the conflict between its pals for production on the one hand and recruiting on the other.

The Department of Agriculture keeps urging the farmers of Canada to produce, produce, and to keep on producing. The Ministe or Finance implores manufacturers to keep up their productions, partly because he wants to get a slice of their profits, but in a greater measure because he recognizes that only by production can we as a nation meet our financial obligations. The Chairman of the Imperial Munitions Board keeps clamoring for deliveries, and threatens delinquents with cancellation of their contracts unless they speed up. And all the while the Minister of Militia goes serenely on his way taking indispensable men from the farm, from the workshop and from the munitions factory, regardless of the havoc he creates with our national machinery for production.

If the Government's inaction were due to failure to appreciate the seriousness of the situation, then they would be branded as unfit for the responsibilities that have been entrusted to them. But we do not believe anything of the kind. They kno. they must know the straits to which manufacturers are already being reduced in coping with this problem of production. Unless they are devoid of imagination they must also realize that things will grow far worse before they begin to get better, because thus far the Minister of Militia has secured only half the men he set out to secure. They have also been shown evidence pointing to the probability of a drop this year of $300,000,000 in Canada's agricultural production, due to the inroads which recruiting officers have made on farm labor. They cannot contemplate that with very much satisfaction. But still they hesitate to apply the remedy which they know to be the proper one, and which sooner or later they have got to come to. Why?

If it's votes they're afraid of it would seem pertinent to remark that men who are so easily scared from following the path of plain duty are a mighty poor outfit to direct Canada's end of the campaign to hunt the Huns.



BY THOMAS STANFIELD

IN article seven the first problem in elbow pattern development was described. In a number of issues elbow pattern development will be dealt with. Elbows of all kind sizes and shapes.

It will be seen by referring back to the article mentioned that the pattern shown was that of a round two piece elbow.

The problem to be taken up in this article is that of describing two forms of two pieces to fit elliptical pipes.

First determine the true shape of the elliptical pipe. The plan in Fig. 1 is the assumed shape of the pipe. From this plan draw an elevation A B C D, and describe the mitre E F. Next divide the plan into equal parts as shown at 1, 2, 3, 4, 5, 6, 7, 8, 9. From these points erect perpendicular lines, each cutting mitre line E F.

Now draw a stretchout line see B B. Fig. 2, and transfer the measurements from the plan Fig. 1 beginning at B 9, 8, 7, 6, to 1, and repeat to the right until B. 9 is reached. From each of these measurements erect the required number of perpendicular lines to the height of the elbow desired.

This is Article 10 of a new series of practical problems for sheet metal workers, prepared by a practical man especially for the readers of Hardware and Metal. Hardware merchants conducting tinshops have told us that they and their men have found Hardware and Metal's sheet metal courses to be of inestimable value to them, and in many cases they have filed the problems, with the result that they now have several complete courses which employees consult when confronted with sheet metal working problems.

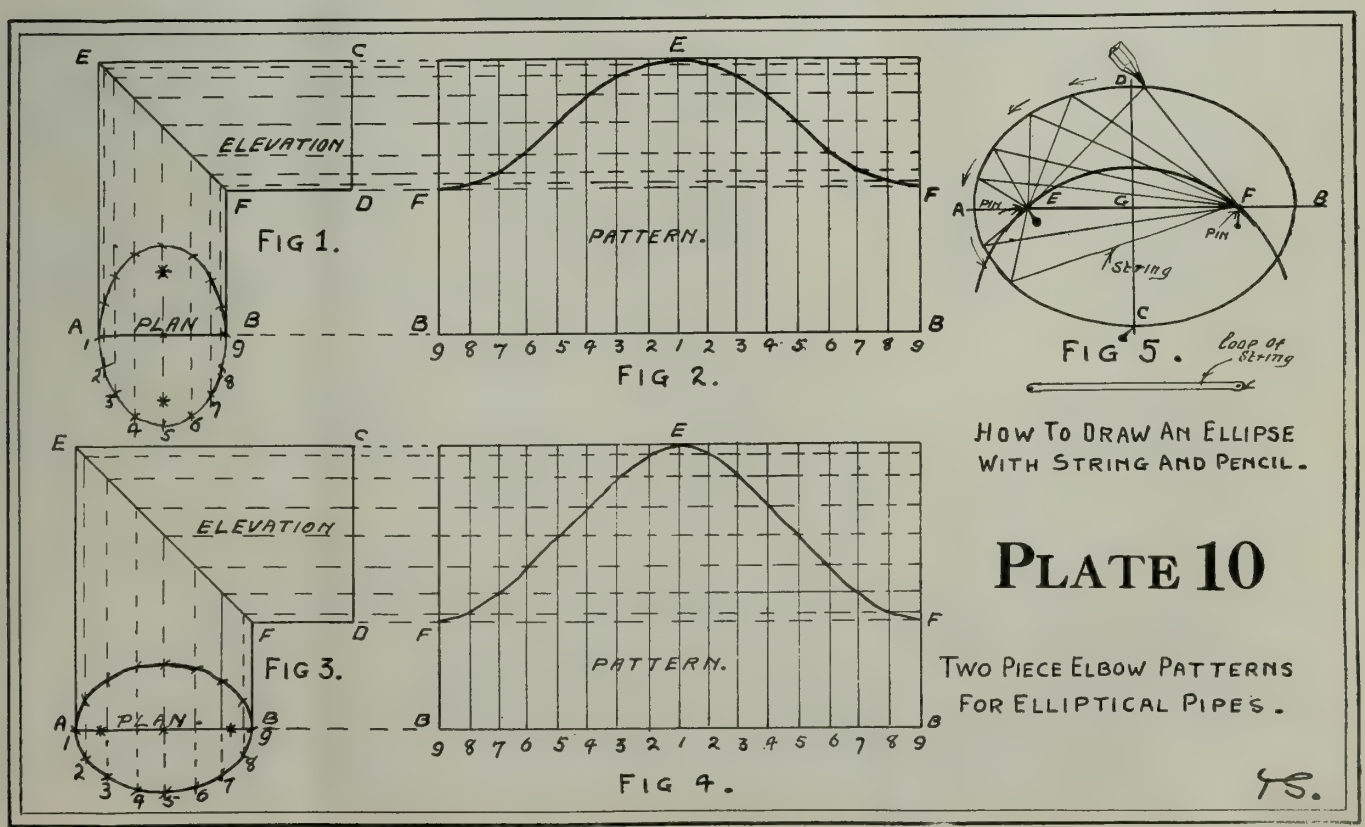
Now draw a number of dotted lines from points already cut on the mitre line in Fig. 1, until all the vertical lines in Fig. 2 have been intersected.

To complete the pattern, draw a thicker solid line from each point where the dotted horizontal lines have intersected the perpendicular solid lines allowance must be made for seams or locks.

Figs. 3 and 4 show another form of elliptical elbow, the pattern of which may be developed by repeating the instructions given for development of pattern Fig. 2.

Fig. 5 shows an enlarged view of an ellipse, which can be drawn by the use of two pins, a piece of string and a pencil. To draw an ellipse in this way first determine the length and width required and draw two lines at right angles as shown at A B C D G, with A or B as centre open compass to G and with C as centre, draw an arc cutting line A B, as at E F. Now place pins at E F and C and tie a loop round the three, remove the pin at C and insert a pencil, keping the string taut draw the ellipse.

(Continued in Next Issue



EVENTS IN THE TRADE

Business Changes

Rosthern, Sask.—L. J. Friesen, hardware, has sold out to H. F. Penner.

Quyon, Que.—G. T. Mohr has been succeeded by Quoyon Hardware Co.

Elgin, Man.—T. W. Draper has been succeeded by Ross & Smillie.

Birnie, Man.—A. Kilburn, hardware, has been succeeded by Victor Wilson.

Colgate, Sask.—Mundy & Fox, hardware and furniture, have dissolved, S. A. Fox continuing.

Shoal Lake, Man.—Est. of D. S. Manson stock has been sold to A. B. Fishman.

Fairlight, Sask.—Burton & Joslin, hardware, have dissolved partnership, W. J. Burton continuing.

Halbrite, Sask.—C. G. Rebstock & Son, hardware and implements, are removing to Verwood.

Obituary

Carnduff, Sask.—The death occurred here of E. J. Hunter, hardware merchant.

Richmond, Que.—The death occurred here recently of Kenneth McRae, senior partner of McRae Bros., grocers and hardware.

Toronto, Ont.—The death took place suddenly at his home here of Charles Sellers of the Peerless Furnace Company.

The late Mr. Sellers was born in Glasgow, Scotland, 83 years ago, and came to this country when about eighteen years of age. He was head of the Peerless Furnace Company, of which company he had been a member for 25 years. Previous to his association with that firm he had for 20 years been superintendent of the Gurney Foundry Company.

Ontario Incorporations

Universal Novelties Company, capitalized at $25,000, head office Toronto, to manufacture and deal in toys, novelties, etc.

Dominion Incorporations

Foundry & Machine Company, capitalized at $200,000, head office, Montreal, Que., to operate brass, iron and other metal foundries.

Barr Registers, capitalized at $300,000 to take over the assets of Barr Registers, and to manufacture and deal in account registers, etc.

Consumers Metal Co., capitalized at $40,000, head office Montreal, to manufacture, smelt, mine, and deal in all classes of base and combined metals, paints, colors, etc.

Colonial Glove Company, capitalized at $20,000, head office Montreal, to manufacture and deal in gloves, mitts, moccasins, etc.

Acme Steel Goods Co., of Canada, capitalized at $3,000, to manufacture and deal in steel goods.

Lt.-Col. Gartshore Honored

London, Ont.—Acting for his Royal Highness the Duke of Connaught, Grand Prior of the Order of the Hospital of St. John of Jerusalem in England, Sir John Hendre presented Lieut.-Col. William Moir Gartshore, vice-president and general manager McClary Mfg. Co., with the insignia of the Order in recognition of his long and prominent interest in Red Cross and hospital work since the outbreak of the war.

New Firms

Pembroke, Ont.—T. J. McManus will open a hardware store here on April 1, and would like to receive catalogues and price lists from wholesalers and manufacturers.

To Make Toys

Owen Sound, Ont.—G. C. Seebert, formerly sales manager, portable house and novelty departments of the Schultz Bros. Co., Brantford, has joined the staff of Galbraith & Co., Ltd., of Owen Sound. The company's plant is now being equipped to manufacture toys and other goods formerly imported from abroad.

Personal

C. P. Moore, hardware merchant, Sydney, C.B. has been elected president of the Board of Trade.

M. F. Whimster will represent the Merrick-Anderson Co., Winnipeg, at Calgary. Mr. Whimster has been at Vancouver for the past couple of years.

WINNIPEG PAINT CLUB RE-ORGANIZED

A meeting of the Paint and Oil men of Winnipeg was called recently with a view to re-organizing the Winnipeg Paint Club, which had its inception in 1912.

All the eadinfg Paint Manufacturers and Wholesale Jobbing Houses of the city were represented, and it being the opinion of everyone that many benefits should result to the members of the trade generally, by getting together for the discussion of their various troubles, it was decided to proceed with the election of officers for the ensuing year.

The following were elected to the executive positions of the Club:

President, W. Osborne, M. Marshall-Wells Co., Ltd.; vice-pres., D. McIvor, G. F. Stephens & Co., Ltd.; Director, W. J. Bland, Canada Paint Co., Ltd.; Director, P. Sutherland, J. H. Ashdown, Hardware Co., Ltd.; Secry-Treas., L. DcMerrall, Martin-Senour Co., Ltd., of Winnipeg.

It was decided to hold a meeting of the Club Members once a month, and the first of these meetings was held at the St. Regis Hotel.

The meeting was well attended, and many items of interest to the members were discussed, while lunch was served, and the gathering, both from a business and social point of view, augurs well for the future success of the Club.

ALERT FOR NEW LINES

The average retailer to-day is on the alert for new and profitable lines. He realizes that if he is to keep up with the trade procession he must sell profitable goods, and goods that the people want.

In order to cope with the ever threatening "rising costs of doing business" the retailer has to be on the look-out for new lines which bear a reasonable margin of profit and are quick sellers. And the man who says that the retail hardwaremen of Canada are falling behind in the march of progress must be sadly misinformed, or he has not made a close study of conditions in the retail hardware field.

Few of us escape falling into rutty ways during a year of routine. Many of us have yet to realize the depth of the ruts we have traveled in if, indeed, we have become conscious of their existence. A rut impedes freedom of action and is a barrier to the exercise of initiative. Most lack of success credited to bad luck can be ascribed to mental slothfulness or "rutting."

HARDWARE LETTER BOX

Gas Built Thermostat

Sommerville Hardware Co., Edmonton.—Please advise where we may secure a gas built thermostat for the Peerless incubator.

The Lee Manufacturing Co., Pembroke, Ont., makers of the Peerless incubator, can supply the thermostat asked for.—Editor.

School Seats

Huyck & Weston, Hafford, Sask.—Will you please give the address of the Globe Mfg. Co., makers of school seats, also names of other firms making this line?

The Globe Furniture Co. is located at Waterloo, Ont. School seats are also made by Canadian Office and School Furniture Co., Preston, Ont.; Stratford Mfg. Co., Stratford, Ont.; Hanbury Mfg. Co., Hanbury, Man.—Ed.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

230. **Wire goods.**—A Birmingham commission agent inquires for tinned mattress wire in coils 16 in., 23 gauge, 22½ gauge and 22 gauge. Galvanized soft link wire, 11, 12, 13 gauge. Also same in tinned. Hard spring wire tinned and galvanized in 11, 12, 13 gauge. Price per ton delivered Birmingham desired.

234. **Asbestos Cement Slates.** — An Irish firm wishes to get into touch with Canadian manufacturers of asbestos cement slates.

235. **One-Sided Coated Board.** — A London corespondent asks for names of Canadian manufacturers of one-sided coated board, 25-inch by 20-inch.

238. **Woodpulp and Paper; Iron and Steel Manufactures, etc.**—A merchant firm at Barcelona, Spain, wishes to get into touch with Canadian manufacturers of wood-pulp and paper; also iron and steel manufactures, hardware and cutlery, leather, chemical products, fine woods for furniture manufacture, etc.

239. **Dowels and Broom Handles.**—A firm of timber merchants and importers in Sunderland, Eng., wishes to purchase dowels and broom handles, 50-inch by 1⅛-inch.

243. **Linseed Cakes.**—A Hull importer wishes Canadian quotations on linseed cakes.

CREDIT MEN IN QUEBEC

Montreal, March 22.—(Special.)—The Canadian Credit Men's Trust Association, Limited, has at last concentrated its efforts in the Province of Quebec. A large and representative meeting of wholesalers was held in the Windsor Hotel, Montreal, recently, all trades being represented. The general manager, Henry Detchon, went fully into what the association had already accomplished in the way of legislation in other provinces throughout Canada. He dwelt upon the unsatisfactory conditions regarding the insolvency laws which prevail in the Province of Quebec, and advocated a Federal Bankruptcy Act, which would prove in the case of a known insolvent that an insolvent debtor should be forced to make an assignment. He stated that as a quid pro quo the wholesale trade was willing to grant a discharge to an honest debtor. He deprecated, however, the establishment of expenses of bankruptcy courts with all their consequent extravagance in the way of legal and other charges. He was not backward in stating that the practice in the City of Montreal of soliciting assignments was one of the worst features in the insolvency business.

The Credit Men's Association has been strong in every province except Quebec, and a great deal of good work has been accomplished. The effort now is to secure the co-operation of strong wholesale and manufacturing concerns in Quebec in a campaign to fight poor accounts and eliminate bad debts. The indications of the Montreal meeting were that the wholesalers would give their co-operation.

D. S. Benvie, of the firm of Jas. Robinson, occupied the chair. A vote of thanks to the speaker of the evening by W. L. Helliwell, the newly-appointed manager of the Gurney Massey Co.

It is believed that the association will have hearty support from the Canadian Bar Association, Quebec Bar Association, and the Legislature in the endeavor to improve conditions under which credit has been extended.

H. H. Cromwell, who has been representing the association in Montreal, has joined the Canadian Army Service Corps and expects to leave for the front at any time. It is understood that he will be replaced by a strong man, who will have the confidence of the entire trade of Montreal.

LAST MINUTE PRICE CHANGES

Just as Hardware and Metal is going on the press, a number of new price changes have been announced as follows: Black iron rivets are now quoted at 42½ per cent. off list; tire bolts, 55 per cent.; stove bolts, 65 per cent.; wrought iron washers, 30 per cent., in 100-lb. lots; smaller lots, 25 per cent.; corrugated steel fasteners, plain edge, 65-10 per cent.; saw edge and multiple point, 55-5 per cent.; wire carpet tacks, 75-5 per cent. The foregoing prices apply to Toronto, Montreal, London, Hamilton.

DO YOU QUOTE PRICES?

(Continued from page 26.)

the method used in the Mills ad. in describing the wringers. A particular wringer is described minutely. Its advantages are set forth in a comprehensive way.

These advertisements were of equal size—ten and a half inches across two columns. The advertisement of the Mills company has drawing power and would undoubtedly get the business. Beyond the fact of keeping the merchant's name prominently before the public and apprising the public he has quite a variety of washing machines and wringers there is very little definite pulling power in the Lapierre ad.

An Ad. That Gets to the People

The Mills ad. is an example of one which will get a hearing from the housewife. Sufficient is told about each machine to give the intending purchaser some idea of that particular machine. A little talk of a general nature at the beginning of the advertisement gets the reader interested. The ad. then progresses to the details about a certain style of machine and ends by quoting the price. When the story is told there is something for the would-be purchaser to lay hold of. This is good salesmanship. In the case of the Lapierre ad. there are a number of glittering generalities thrown together which in their ensemble do not make a telling appeal.

CATALOGUES AND BOOKLETS

B. T. Barn Book

Beatty Bros., Ltd., Fergus, Ont., have issued the "B. T. Barn Book," No. 26, consisting of 326 pages, featuring galvanized steel cow stalls, sanitary steel pens, horse stable fittings, water bowls, tanks, hog pens and troughs, barn door track, manure and feed carriers, hay carriers. The book is handsomely illustrated. It contains interesting and valuable information on barn construction, equipment, layout of stalls, ventilation, lighting, framing, etc. Copies of the book will be supplied on request.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

MODEL 66 BICYCLE

Great Western Manufacturing Co., Laporte, Ind., have placed on the market a new bicycle, Model 66, patented braced frame. The bicycle is equipped with Fauber crank hanger and roller chain, coaster brake and mudguards and stand, large person's Sterling saddle, No. 6 rubber motor pedals. The guards are steel, front and rear, double braced;

Model 66 Bicycle

enameled with centre stripe to match head. The handle bars are No. 10 adjustable expander forward extension, with No. 10 bulldog grips.

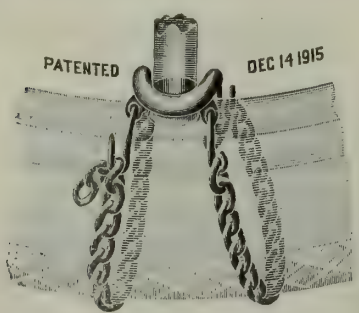
The frame is described as follows: 20-22 inches, 4 and 5-inch head, 1 inch, 19-gauge tube; flush connection, 7/8-inch tapered rear forks, 3/4-inch rear stays, push-back adjustment, bolt and nut seat post clamp.

A number of other important features are emphasized in a descriptive booklet recently issued by the company, and which will be mailed on request.

The manufacturer is represented in Canada by Humphrey Cycle and Motor Co., 51 Bulwer Street, Toronto.

GRUS CHAINS AND OILERS

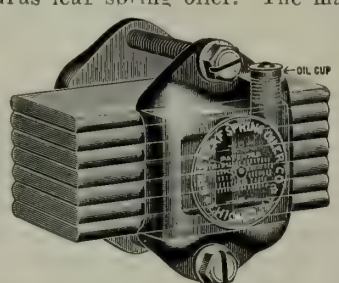
Grus Leaf Spring Oiler Co., Chicago, Ill., offers to the hardware trade the Grus emergency non-skid chains and the Grus leaf spring oiler.



Grus Emergency Non-skid Chains

The makers state that the non-skid chains are easily attached around the tire and spoke in a minute when you need them, and as easily taken off when not needed. The chains are made to fit any wheel or tire, and are packed in sets of four or six pairs in a bag, sufficient for both rear wheels. The makers, in referring to the chains, make the following claims:—"With the present style of chains, a rainy day or wet roads means keeping the chains on all day for the entire trip. Even though it clears or the roads dry, fear of threatened rain or a slippery, muddy stretch of road, causes the motorist to ride with the discomfort and extra wear of chains, rather than go to the trouble of taking them off, when it might be so difficult in a mud hole or inconvenient in a rain to go through the laborious process of putting them on again. Grus Emergency Non-Skid Chains obviate this unnecessary condition. It is no trouble to take them off. They can be put on in a mud hole as easily and quickly as on an asphalt pavement. They grip firmly with play that can be regulated to suit, and prevent slipping, sliding and skidding the same as any good chain."

Another product of the company is the Grus leaf spring oiler. The makers



Grus Leaf Spring Oiler

claim that the oiler is easily attached. It is placed exactly one-third to one-half the distance from the centre toward the end of the spring on all cars but Fords, on which it is placed near the end of the shortest leaf.

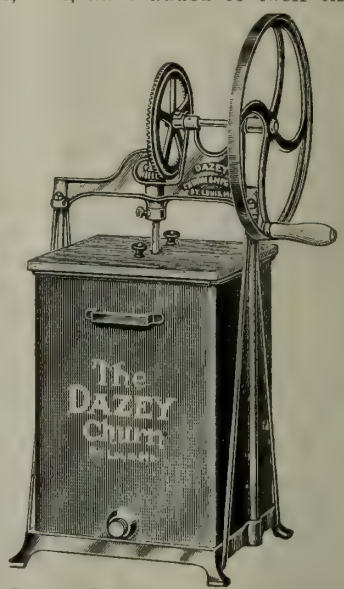
Bound to the side of the spring by the encircling rod, holding the felt cup and pad firmly against the spring so that it cannot leak. The reserve cup of the oiler keeps the felt cup and pad constantly filled with oil.

The vibration of the springs as the car moves over the road, allows the oil to seep in between the leaves of the spring, keeping them properly oiled at all times by constant feed.

The oilers are made in two styles, six sizes each, to fit the springs of any car. Descriptive matter with prices will be supplied on request.

TWO NEW DAZEY CHURNS

The Dazey Churn & Mfg. Co., of St. Louis, Mo., have added to their line of



New Dazey Churn, made in one and two gallon sizes.

churns two new sizes. They are of one and two-gallon capacities, and are designed especially to meet the requirements of the buttermaker, who has only a small amount of cream to churn; to appeal to those who sell cream, keeping only a small amount for making butter for their own use.

The "Principle" of the new sizes is the same as that of the larger sizes. The receptacle and dasher are free of the frame, which, the makers state, makes it most convenient in cleaning and handling.

Butter, is is claimed, can be made in three to eight minutes, and then washed right in the churn, doing away with the labor of working the butter.

The metal receptacle cannot absorb a particle of moisture, and will stay sweet and clean.

A factory at Manor Park in England will shortly be turning out string and twine manufactured from ingredients similar to paper. Already these articles have been produced in considerable bulk. This string and twine is reported as being strong, waterproof and cheap in comparison with the hemp articles.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The outstanding feature of the market this week is advance of $2.25 per 100 pounds in the price of white lead in oil, making the price $13.80 per 100 lbs. at Montreal in ton lots. The advance follows abnormal developments in the lead market. The present price is firm and orders are being accepted for immediate delivery only. The upward movement of iron and steel and the continued advances in the prices of many manufactured products still dominate the hardware markets. Some of the lines advanced in price this week are black and galvanized iron pipe, black sheets, tin plate, copper bars and sheets, brass sheets and tubes, reeled machinery steel, spring steel, lead wool, lead pipe, sheets, bends and traps, shot, hinges, green wire cloth, tacks, screw hooks, gate hooks, stove pipe hooks and eyes, cap screws, set screws, standard augers, ship augers, emery powder, clout nails. wood pulley blocks, English snatch blocks, lamp black, standard and fancy butts, lifting jacks, cotter pins, shelf brackets, steel hollowware. Higher prices may be expected on certain lines of manufactured steel and iron, bar iron, shovels, spades, etc. A number of stove manufacturers have announced a further advance of 5% in the price of stoves. Tin has advanced and lead is firm and abnormally high in price. A new and higher price has been issued on arsenate of lead. A new list of shoe findings has been issued. The market reports throughout are full of reliable and important information for the retail hardware merchant. Business has been quiet during the week on account of the recent cold weather. The linseed oil market is slightly weaker, turpentine is firmer, and ready-mixed paints are very firm, owing to the advance in white lead.

MONTREAL

MONTREAL, March 24.—The continuance of the upward movement of manufactured iron and steel, the spectacular performance of certain of the metals, the continued widespread readjustment of prices in every branch and affecting almost every item of the hardware trade— these factors continue to dominate the hardware situation. Their general description varies little from weeks which have passed but to their repetition emphasis might even be added. So far as business is concerned, conditions may not be quite so active as during February so far as new orders are concerned but with the approach of the first of April activity in relation to spring shipments is increasing and this will continue for the next month or so. Cold, unseasonable weather has proven a check to certain seasonable demands especially in the city and also threatens to shorten the maple syrup season. However, the tone of the situation is generally cheerful and there is a material improvement over a year ago.

In the iron and steel market pipe, tinplate, sheets and some other items record further advances and the end of the upward movement does not appear to be in sight. Great difficulty is being experienced in getting certain supplies from England and American mills are showing little or no improvement in their attitude towards new business. Bars, shapes, tinplate, hoops etc., are showing advances on Pittsburg quotations and these are likely to be reflected here. While the end is not in sight retailers will do well to use judgment in their buying for it must be remembered that it is the war demand that is really behind the advances and that in Canada especially war conditions and war prices may have considerable effect upon consumption.

In the metals tin is the feature, showing a considerable advance. The rise of a couple of cents came with a drop of four cents in New York, but, as has been explained before, this is due to the fact that Montreal is following London with regard to this particular metal. Lead holds its previous big increase and may go higher. Already white lead to the paint trade has gone to record prices and there are material advances on pipe and sheets.

Some of the lines advanced this week are: solder, black and galvanized wrought iron pipe, black sheets, tin plate, copper bars and sheets, brass sheets and tubes, machinery steel (reeled), spring steel, lead wool, lead sheets, lead traps and bends, shot, hinges, green wire cloth, tacks, shoe findings, screw hooks, gate hooks, stove pipe hooks and eyes, cap screws, set screws, standard augers, ship augers, emery powder, clout nails, English wood pulley blocks, English snatch blocks, English steel blocks, standard and fancy butts, lifting jacks, English cotter pins, shelf brackets, coal heaters, steel hollow ware. Higher prices may be expected for certain lines of manufactured steel and iron, bar iron, shovels and spades, etc.

Tin Scores Big Advance.—A material advance on tin is recorded this week, the local quotations being advanced 2 to 2½ cents and on the rise the market is very firm. What might be considered a remarkable feature in connection with this increase is that during the same period there has been a decline of 4 cents in New York. However, it will be remembered that it has previously been pointed out that tin is the one metal with regard to which Canadian markets now follow London as against New York. This is largely due to the factor that there is a conditional embargo against exportation of tin from London, which does not necessarily apply to Canada, and this is important to United States for the reason that her supply of the metal is largely imported. At present there is a shortage in the local market and the advance has been made on this account while at the same time New York has been relieved as regards spot supplies and the price has receded; the position a week ago was that New York was actually 5 cents higher than Montreal, whereas this market is now about 2 cents above the former. Montreal quotation: 52½-53—steady and firm.

Copper Continues Steady. — Copper continues in the steady position it has occupied for some weeks when it struck a high level after a remarkable upward movement and this would indicate that the war consumption justified the gains which were registered. Prices show small fluctuations and New York has only moved fractionally; large business for any delivery is said to be lacking. In the latter connection it is reported that consumers have larger stocks on hand that they have ever held before and at the same time they are due for to accept heavy deliveries. But while production and deliveries are breaking records it is doubtful if they are more than consumers actually require and the position of the market appears to be sound for the time being at least. Montreal quotation: 32c-32½c—steady.

Lead Very Strong.—The lead market is firm on the sensational advance record-

ed last week, an increase which in the meantime has made itself keenly felt in relation to the different manufactures and products of the metal. White lead, lead pipe and lead sheets are all higher. In view of the fact that New York has shown further advances since last report there are evidences that the upward movement in this market has not yet reached the top. The American Trust has raised its quotation 10 cents but this price is merely nominal in view of the fact that independents and second hands are getting ¾ to 1 cent above. There is a lack of offering and an acute scarcity of supplies which has led to such an unsettled state of affairs that the future is very vague and the Trust is declining to take bookings at flat prices—a state of affairs which does not seem likely to precede developments favorable to buyers. London has also been very strong recently. Montreal quotation 10¾c-11c—strong and unsettled.

Solder Takes a Jump.—With the remarkable advance in the tin market and rising cost of other raw materials entering into the manufacture of solder, the market appears to have lost its balance entirely. Advances are heard all the way from 1c to 21c and 8c to 9c per pound. The top quotation heard by Hardware and Metal was 36c for Commercial half-and-half and 38c for Strictly half-and-half. However, more conservative figures upon which recent quotations have been based would indicate the market as follows: Commercial half-and-half 30½c-31c and Strictly half-and-half 32½c-33c.

American Influences. — In iron and steel, Canada has been following the American lead to a large extent, owing to the fact that much of our supply came from that market. It may be worthy of note then to point out that prices are advancing at Pittsburgh for bars, shapes and plates, with hoops up $5.00 the ton and tin plate 50c a box higher, while the conditions prevailing are described as unprecedented. Reports from Pittsburg also indicate that bar iron is due for further advances in the immediate future.

Pipe Going Up Again.—Although the last advance on pipe has just nicely been put into effect there are still higher prices now being quoted and these will be in general effect by next week. It will be recalled that some time ago Hardware and Metal drew attention to the fact that tubular goods were scoring rapid increases in the United States. Revised prices for buttweld pipe are shown in a panel elsewhere.

Black Sheets Higher.—Certain gauges of black sheets have recently been raised to still higher prices. The increase is of course due to difficulty in securing these sizes from the mills. New quotations are:
10 gauge, $4.35; 12 gauge 4.45; 14 gauge, $4.20; 16 gauge, 4.25.

Tinplate is Scarce. — Reports in the trade are to the effect that the situation as regards tinplate, tinned iron and sheets is growing so acute, as the result of short supplies, that adjustments to higher prices appear to be the logical conclusion. There is a difficulty in getting supplies from Great Britain and the United States mills show little or no interest in orders.

Cokes Bright Higher.—An advance on Cokes bright of 25 cents has been made. Quotations now are: Bessemer steel, 10 x 14 x 20 base, $6.50; 20 x 28, double box $13.00.

Copper Sheets Go Up.—Several times in the past few weeks it has been pointed out in these columns that the logical effect of the spectacular upward movement of copper—if the advance was held—would be to cause higher prices for sheet copper. The metal having well maintained its position the adjustments for sheets have been made as follows:

	Old	New
Bars, ½ to 2 in.	$41 00	$47 50
Plain sheets, 14 oz., 14x28 in., 14x60 in.	44 00	46 00
Copper sheet, tinned, 14x60, 14 oz.	46 00	55 00
Copper sheet, planished, 14x60 base	54 50	58 00
Braziers' in sheets, 6x4 base	43 00	47 50

Brass Sheets Also.—Under practically the same influences as caused the advance in copper sheets, brass sheets have also been sharply advanced as indicated by the following quotations:

	old	new
Springs, sheets, 8 in. wide, up to 20 gauge	0 48½	0 60
Rods, base ½ to 1 in. round	0 43	0 55
Tubing, seamless base	0 46½	0 55
Tubing, iron pipe size, 1in. base	041	0 50

Copper tubing, same as brass.

ARSENATE OF LEAD.

Per 100 lbs.	Dry	Paste
1-lb. bottles	$35 00	$21 00
2-lb. bottles	....	18 00
5-lb. bottles	31 00	14 00
10-lb. bottles	29 00	....
25-lb. irons	25 50	13 00
50-lb. irons	....	12 50

200-lb. irons	....	11 60
Barrels	....	11 00

F.o.b. Toronto, Montreal and Hamilton.

Machinery and Spring Steel. — Advances are recorded this week for reeled machinery and spring steel following the different increases covered in last report. Both are now quoted at $4.00 as compared with $3.50.

Lead Sheets Again Higher. — In last report an advance of 1 cent on sheet lead was recorded. Under the influence of the rapid rise in the cost of the raw material this has been followed by a further increase of ½ a cent. Quotations are now as follows:
Lead Wool, 13c lb.; Sheets, 3 lbs. sq. ft., $12.50; Sheets, 3½ lbs. sq. ft., $11.80; Sheets, 4 to 6 lbs., sq. ft., $12.25; Cut sheets, ½c per lb. extra. Cut sheets to size, 1c per lb. extra.

Lead Pipe.—Lead pipe is very firm at the new high quotations of $13.50 for lead pipe and $14.50 for lead waste pipe. At the same time there has also been an increase in traps and bends, the discount being reduced from 25 per cent. to 15 per cent.

Situation in Horse Shoes.—One of the remarkable features of the present situation in manufactured iron and steel is that, although the raw material has gone up by leaps and bounds, there are some standard lines which have not been affected. Horseshoes, for example, despite the higher cost of iron and steel, remain at the same quotation as when the war broke. An advance of a material character at any time would not be a surprise to the trade under these conditions.

In Hardware Lines. — The readjustments to higher levels continues throughout many hardware lines, those advanced this week being largely of a character to be directly affected by the upward movement of the iron and steel markets and certain of the other metals. Advances of this kind seem likely to continue until such time as a comparatively normal state of affairs has been re-established.

Shot Again Up.—For the third time in as many weeks the price of shot has been affected by the action of the lead market. The price two weeks ago was $12.00; last week it advanced to $13.13 and now it is raised to $14.25. The future of shot is just as uncertain as is that of the lead market.

Hinges are Higher.—The several advances which have been recorded for hinges have been followed by another adjustment largely affecting heavy tee. The discount on light tee and strap has been changed from 57½ to 50 and 5 and the net prices for heavy tee are now as follows:
4 in., doz. prs. $1.16; 5 in., doz. prs. $1.45; 6 in., doz. prs. $1.63; 8 in., doz. prs $1.85; 10 in., doz. prs. $3.33; 12 in., doz. prs. $5.25; 14 in., doz prs. $5.36.

Poultry Netting.—In connection with the discount on poultry netting, one local wholesale house announces that in addition to an allowance of 30 per cent. on the 1 and 2 inch mesh, a basis of 25 per cent. discount has been struck for the other sizes.

Green Wire Cloth.—In addition to a quotation of $1.87½ for black painted screen, in 100 ft. rolls, a price of $1.92½ for green wire cloth has been heard. This appears to be due to the fact that there has been some difficulty in getting deliveries of the green.

New Tack Discount.—There has been another advance on the standard tack last. The new discount is 75 and 10 per cent. as against 75 and 25 per cent. All items on the list are equally affected.

Double Pointed Tacks.—There has recently been a change made on double pointed carpet tacks, this being the first time they have been affected; they are not on the regular discount list. The new discount is 80 and 10 per cent.

Shoe Finding List. — The second list on shoe findings to have been issued in the last few weeks—the former one be-

ing on February 1st—has reached the trade. It provides for general advanccs and is reproduced in detail in a panel in connection with this report.

Shovels and Spades to Go Up.—A prediction made a few weeks ago that a stiff advance on shovels, spades and scoops was to be expected in the near future is being emphasised in the trade this week, and the indications are that the rising cost of raw materials will force this increase at an early date.

Hooks, Eyes, Etc. — What are generally classed as "wire goods" in connection with such hardware lines as hooks and eyes, gate hooks, etc., have recently been advanced in price as the result of the higher cost of raw material as indicated by the wire market. The increase is about 10 per cent. Screw hooks and gate hooks and eyes are now quoted 40 and 10 per cent. off and stove pipe eyes and screw hooks and cornice hooks 40 per cent. off.

Cap and Set Screws. — A further change in the discount allowances for cap and set screws is indicated in the quotations of a local wholesale house. Cap screws are now 55 and 10 per cent. off as against 60 and 5 per cent. and set screws 60 and 10 per cent. off as against 65 and 10 per cent.

New Auger List.—As previously reported there are new list prices on various augers, the discounts remaining as before. Prices are higher owing to the increased cost of steel. The sizes affected are 3-16 to 8-16, the latter remaining as before at $5.00. The 3-16 and the 7-16 were formerly $4.50 and the 4-5 and 6-16, $4.00. All sizes up to and including 8-16, are now $5.00. Discounts unchanged.

Ship Auger List.—There has also been a general readjustment of the ship auger list. Not only does this cover advanced for both the "with screw" and the "without screw", but the latter are now 20 per cent. higher then the former. Quotations for best known sizes are now as follows, figures being for "with screw" ("without screw" being 20 per cent. above), 6-16 to 10-16, $11.00; 11-16 and 12-16, $12.00; 13-16 and 14-16, $13.00; 15-16 and 16-16 $14.50; 17-16 and 18-16, $16.00. Larger sizes in proportion. Discounts unchanged.

Auger Sets.—The standard auger sets of 13 pieces with discounts applied has been increased on the list from $7.00 to $7.50. Other auger lists have been advanced, the increase being generally about 5 per cent.

Emery Powder Higher.—Following on the advance on emery paper referred to in last report there has been an increase for certain grades of emery powder. Emery flour remains unchanged at 4 cents but the balance of the list, from 10 to 140, shows advances of 6 to 8 cents.

Clout Nails Higher. — The first advance on counter sunk clout nails noted in the hardware trade for years has gone into effect as the result of the general upward movement of such lines. The increase is 25 to 30 per cent.

Pulley Blocks.—The discount on English wood pulley blocks has been changed from 70 per cent. off to 65 per cent. off as the result of the increased cost of importing such goods. The snatch blocks have also been increased, and the discount is now 60 per cent. off as against 65 per cent. off. English steel blocks are quoted 60 per cent. off as against 67½ per cent. off.

Butts Go Higher. — Of the standard butts No. 800 been advanced, the discount now being 40 and 10 per cent. off as compared with 50 and 5 per cent. off.

NEW PRICES ON WROUGHT IRON PIPE.

In effect March 20.

Montreal and Eastern List.

Other numbers 804, 840, 802, 808, 814, etc., are unchanged. There has also been a further advance on fancy butts, the increase being about 10 per cent. all round.

Lifting Jacks. — Screw lifting jacks have been advanced by the wholesalers on advice from manufacturers. New $3.15; 2 inch, $4.15; and 2½ inch $6.65.

English Cottor Pins. — English cotter pins which have not changed their price to the trade for years have been affected by the general upward movement of such goods. The new discount is 90 per cent. as compared with 90 and 30 per cent. formerly.

Shelf Brackets, etc. — The standard shelf bracket No. 792 has been advanced about 10 per cent. There have also been new and higher prices issued for hammock hooks. Some dealers are advancing their single barrel shot guns about 5 per cent.

Coal Heaters Up 5 per cent.—An important change in prices in the stove situation has taken place this week, all coal heaters being advanced 5 per cent. This is another of the direct effects of the rising cost of iron.

Steel Hollow Ware. — Manufacturers of steel hollow ware, such as frying pans, etc., announce an increase of about 5 per cent. Higher cost of raw materials is the reason.

Butterfield Goods.—In connection with the new list of Butterfield goods wholesalers report that thus for they have not found that there is any very general change. There have been a lot of adjustments made but there appear to be few actual advances and these only about 5 per cent .

TORONTO

TORONTO, Ont., March 23.—The volume of business moving in the hardware trade continues satisfactory, and the outlook in many respects is favorable. As the spring approaches the activity is becoming more noticeable, with a better demand for seasonable lines. Many of the principal industries in Canada are experiencing a period of unusual prosperity owing to the large volume of business coming forward. Many factories are working at capacity, and in many cases are unable to handle all the business offering. A shortage of labor is beginning to be felt, which will no doubt become more serious in the course of a few months, particularly with regards to skilled help. This activity is due largely to war orders, but the domestic demand is steadily improving as the country becomes more prosperous and the financial situation easier.

Prices Still Soaring.—The upward trend of prices continues, and there are no indications that the top of the market has been reached. Deliveries from manufacturers are no better. Raw materials are still advancing, and the difficulty of obtaining supplies is increasing. Manufacturers are thus faced with a serious situation, with no prospect of any relief for some time to come. The market will no doubt be disturbed during the coming months with rumors of peace, but the possibility of such a desirable condition seems to be some distance away. The rumors may have a tendency to curtail buying, leading consumers to think that prices will drop immediately. The possibility of an early peace does not appear at all probable, and in any case the chances are that the decline in prices will be gradual to permit of the market becoming adjusted. The policy for retailers seems to be that fair and well-selected stocks should be carried, notwithstanding the high prices at present prevailing. This would put the retailers in a position

to meet the demand which is fully expected to be good this year, particularly in the country districts.

More Price Changes. — The price changes this week are important. The tendency is upward for all lines of hardware, and the market is very firm. Stove manufacturers have advanced their prices 5 per cent., as predicted by Hardware and Metal some time ago. Wrought iron pipe, both black and galvanized, has advanced again. Lead pipe has also advanced on account of the unusual high price of pig lead. Several lines of bright wire goods are higher, and include screw eyes, square screw hooks, gate hooks and eyes. New and higher prices have been issued for clothes line wire. Galvanized and black sheets have advanced.

Steel Market Strong.—The market is very strong and the upward movement in prices continues. The steel mills are working at overtaxed capacity, both domestic and export demand being exceedingly good. All indications point to the present activity lasting throughout the year, as the mills are in a sold out condition. The scarcity of steel and shortage of tonnage is causing considerable anxiety to the steel companies, as there is every prospect of the scarcity of steel becoming more acute, while there is little hope of more ships being available to relieve the export situation. Prices of all steel products are very firm, and some advances have been made this week. Boiler plates, ¼ to ½-inch, have advanced 10c. and are now quoted at $3.50; heads, $3.75, and tank plates, 3-16-in., $3.80 per 100 pounds. The situation in plates as regard to supply is getting steadily tighter, and it looks as if some consumers will come far short of getting enough to meet their needs. Quotations on cold rolled shafting are unchanged, but higher prices may be expected in the near future. The new demand is heavy, and some makers report being sold up for six months or longer. Wrought iron pipe has advanced two points for black and three points for galvanized. Boiler tubes have advanced approximately 10 per cent. Other products which may advance shortly include wire nails, boiler and structural rivets, machine screws. Iron and steel bars are firm and unchanged at $2.75 base per 100 pounds.

Metals.—The feature of the metal market this week is the continued upward movement of lead, due to the scarcity of supplies. The tin market is quieter, but firm, with quotations nominal. There is no change in the copper situation and the market is dull. There is no indication of any falling off in the demand for copper, and the position of this metal is a good one. Spelter has recovered and the market is strong again, heavy buying had the effect of advancing prices in New York. Little interest has been shown in antimony lately, and the situation is unchanged. The aluminum market is easier, but the prices are unchanged. There has been no change in the price of solder this week.

Copper.—The market is dull and prices unchanged. Consumers are well covered for early needs, and what demand there is is for the far-off positions. Indications point to a steady market for some time to come, as it seems hardly probable that quotations will go much higher, or that there will be any marked decline. Quotations are nominal at 30½c per pound.

Tin.—The scarcity of spot tin in New York and the great difficulty in obtaining licenses to ship from London have been the controlling factors in the market for several days. The supplies of tin are increasing, but the consumption seems to be able to take care of all of it. Quotations are unchanged and nominal at 56c per pound.

Lead Very Strong.—The situation in the lead market appears to be getting more acute. The large export demand is still the disturbing feature in New York, and producers seem to be unable to figure on even a small fraction of the inquiries which are in the market. The scarcity of supplies is not temporary, but extends for several months. The "Trust" have advanced their price at 7c New York, but outside prices range from 7.50c to 8.12c, all prices being entirely nominal. Lead has advanced 1½c locally, and is nominal at 10½c per pound, the highest price touched since the war began.

Spelter.—The market is strong in New York, and the buying movement appears to be in progress. In London the upward movement has been well sustained in good demand. Spelter has advanced 1c locally, and is quoted at 22c per pound.

Antimony.—The market is quiet and lacking in interest. The situation is unchanged, and quotations are nominal at 48c per pound.

Aluminum.—The market is a shade easier and demand dull. Quotations are unchanged at 68c per pound.

Solder.—Prices are firm and unchanged. Guaranteed is now quoted at 31½c and strictly at 29¼ per pound.

Boiler Tubes Advance.—Makers of boiler tubes, both lapwelded and seamless, have advanced their prices 10 per cent., and a further advance is looked for very shortly. Quotations are practically nominal, and deliveries are running into four and five months. The primary market is very strong and advancing.

Boiler Plates Advance.—Boiler plates continue to advance, and the market is very strong. The situation is getting steadily tighter, and all indications point to consumers having to do without a part of their requirements. Prices have been advancing in the primary market for some time, with the result that local prices have been affected. The new quotations are as follows:—Boiler plates, ¼ to ½-in., $3.50; heads, $3.75; and tank plates, 3-16-in., $3.80 per 100 pounds.

Bright Wire Goods Up.—Manufacturers of some lines of bright wire goods have advanced their prices, the new discounts being as follows:—Screw eyes, 40 per cent.; square screw hooks, 40 per cent.; screw hooks, "M," 40 and 10 per cent.; gate hooks and eyes, 40 and 10 per cent.

Black Sheets Up.—The black sheet situation is very strong, and prices in the primary market have been advancing steadily for some time. There is an unusually heavy demand in the States for black and blue annealed sheets, and the mills are getting further behind on deliveries. Local prices on black sheets range from 5c to 40c higher than the previous quotations, according to gauge. No. 10 gauge is now quoted at $4 and No. 28 gauge at $3.80 per 100 pounds.

Galvanized Sheets Advance.—New prices have been issued on galvanized sheets, being about 25c per 100 lbs. higher than the previous quotations. The market is very strong, and this advance was expected. In view of the very strong advance in black sheets and the continued high price of spelter, as well as the scarcity and enormous price of acids, there is nothing in sight to relieve the situation for at least the second quarter of this year. "Premier," 10¾ oz., are quoted at $6.95, and "Apollo," 10¾ oz., at $6.75 per 100 pounds.

Wrought Iron Pipe Higher.—Makers of wrought iron pipe have again advanced prices, being the second time this month. The new prices, which are given in a panel, represent an advance of 2 points on black and 3 points on galvanized pipe. Prices of raw materials have been steadily rising for some time, and the latest advance in pipe was anticipated in these columns last week.

Lead Pipe Advances Again.—The third successive advance in lead pipe has to be announced this week. This unusual movement in price is due to the extraordinary situation in the pig lead market, which has reached a record level, and is consequently affecting all lead products. The advance in lead pipe is due entirely to the high cost of pig lead, as the demand for pipe is very light. Lead pipe is now quoted at 13½c, and waste pipe at 14½c per pound. The discount on traps and bends has been lowered from 20 per cent. to 15 per cent.

Clothes Line Wire Up—Prices of clothes line wire have been advanced 25c per 1,000 feet, and are as follows:—No. 17, 7-strand, $5.55; No. 18, 6-strand, $4; No. 19, 6-strand, $3.50 in 50 and 100-feet coils; No. 18, 6-strand, $4.20, in 1,000-feet coils, including reels. All the above prices are per 1,000 feet, f.o.b. Hamilton, Toronto, London and Montreal.

Poultry Netting.—The poultry netting situation has become acute, and fears are expressed that the supply will run far short of the demand this season. On account of the great difficulty that is being experienced in obtaining raw materials, wire and spelter, etc., Canadian makers of galvanized netting have been obliged to suspend operations. They have practically no stocks of netting on hand, and there is no relief in sight. The discount on 1-in. and 2-in. mesh is now 30 per cent., but jobbers generally are not offering any netting for sale.

Soldering Coppers Higher.—Prices of soldering coppers, 3 lbs. and up, have been advanced to 55c per lb., with a proportionate increase for smaller sizes.

Lead Sheets Again Advance.—Prices of lead sheets continue to climb, follow-

ing the increase in cost of pig lead. Lead sheets, 3 lbs. sq. ft,, are now quoted at 13c; 3½ lbs. sq. ft., 12½c, and 4 to 6 lbs. sq. ft., 12¼c per pound. Lead wool is quoted at 13c per pound.

Shovels.—English makers of sand shovels have withdrawn their prices. On account of the shortage of tonnage, great difficulty is being experienced in getting these goods over, and a scarcity of this line is expected in the near future.

Axes Are Higher.—Makers of practically all lines of axes have advanced prices approximately 50c per dozen.

Ready Roofing.—The market is very firm at the advance made last week, and there is no doubt that further higher prices will be announced in the near future. The situation in the market is becoming more acute owing to the serious shortage of rags, affecting not only Canada, but the United States.

Builders' Hardware.—Canadian makers of builders' hardware have made a further advance in all lines, particularly door sets. The jobbers will accordingly raise their prices.

Binder Twine—The new prices for binder twine have not yet been issued, but are expected any time now. As stated in last week's report, there may be some delay in giving out the new prices owing to the situation in the raw material markets. Considerably higher prices than were in effect last year may be expected.

Rope Strong.—Prices of practically all kinds of twine are steadily advancing, which indicates that higher prices for ropes may be expected in the near future. The cordage market is very strong, and business is improving. There is no improvement in the situation, raw materials being high-priced and stocks low.

Stoves Advance.—Many makers of stoves have advanced their prices 5 per cent. Better business is reported, ranges and oil stoves being in very fair demand.

Wire Nails—The market is strong and price very firm. Prices of wire rods have an upward tendency and deliveries are still very backward. Higher prices for wire nails are looked for. Wire nails are quoted at $3.40 base per keg and cut nails at $3.20 base per keg.

LONDON

LONDON, March 21.—Business has been somewhat quiet during the past week on account of the very cold weather. With warmer weather in sight, business has already showed signs of improving. The merchants now have their stocks complete and are waiting for better weather conditions to start the goods moving from their shelves

Big Advance in White Lead. — There has been a big advance in the price of white lead in oil, quotations being $2.25 in advance per hundred pounds. The new price for pure white lead in oil in ton lots is $13.95 and in less than ton lots, $14.25.

Linseed Oil Firm.—The market in linseed oil remains firm, no change being noted from last week. Raw linseed oil is being sold in 1 and 2 bbl. lots at $1.02 per gal., in 3 to 5 bbl. at $1.01 per gal., and 6 to 9 bbl. lots, at 99c. Boiled oil is selling in 1 and 2 bbls. at $1.05, 3 to 5 bbl. lots at $1.04, and in 6 to 9 bbls. $1.02 per gal.

Advance in Turpentine. — Turpentine has advanced one cent per gallon since the quotations of last week and is now selling in one-barrel lots at 79c per Imperial gallon, in 2 to 4 bbl. lots at 78c, and in 5 gal. lots at 86c.

Dry Lamp Black Up 25 per cent.—This commodity has taken an advance of 25 per cent. and is now quoted in 1-lb. packages at 14c lb.; in ½-lb. packages at 17½c, in ¼-lb. packages at 24c, and assorted at 17½ cents.

Wrought Pipe Up.— An advance of from two to three points is being quoted by the dealers. The new price list will be found elsewhere.

Shot Advances. — A further advance in the price of shot is recorded this week. The new discount is 5 per cent. off list.

FRED S. BAILEY

who will represent McFarlane Ladder Works, Toronto, in Western Ontario

Cut Nails Up 10c.—A further increase in the price of cut nails of 10c per keg has gone into effect. They are now being quoted at $3.20 base. There is no change in the price of wire nails, the price being $3.40 base.

New Price on Tacks.—Tacks are now being quoted at 75 and 10 per cent. off list.

Arsenate of Lead. — New prices on arsenate of lead in paste form are being quoted by dealers this week. In 1-lb. packages the price is $24.50 per 100 lbs., in 2-lbs., $21.50; 5-lbs., $17.50; 25 lbs., $16.50; 50 lbs., $16.00; 100 lbs., $15.25.

New Price on Head Roof Nails.—An advance in the price of American large head roof nails is recorded. In 100-lb. kegs the price quoted is $6.40 and in 25-lb. boxes $6.65.

Hooks and Eyes Advance. — Bright screw eyes have also gone up in price, the new quotation being 40 per cent. off list. Bright screw hooks are quoted at 40 and 10 per cent. off list. Gate hooks and eyes are selling at 40 and 10 per cent. off list, stove pipe eyes at 40 per cent. and cornice hooks at 40 per cent.

Glass Prices Advance.—As predicted in recent quotations, glass has advanced 10 per cent and is now selling in single thickness at 3c per cent. off list and in double thickness 30 per cent. off list.

Cut lights are being sold net list.

New Prices on Castings. — Malleable fittings have shown an upward tendency in price, now being quoted at 25 per cent. off list. Unions are quoted at 60 per cent. off list, bushings are also quoted at 60 per cent. off list and plugs at 60 per cent. off list.

WINNIPEG

WINNIPEG, March 22. — The mild weather of the past few days has made the business people feel that spring is at last on its way here, and orders are being handled with every despatch. All jobbers report that there are a lot of car orders ahead of them for shipment this month, and they all seem to be striving to make a splendid record.

Some Price Changes.—There are few price changes to note this week after the exceptional activity noted on last week's sheets, and it is more than likely to be somewhat of a relief to the retail merchants throughout the country. It is more than likely, however, that the activity shown during the past few weeks will be continued to some extent at least, for a considerable period yet. The lack of raw material for so many products is bound to have far greater effects on the prices than have been shown to date, and it is more than likely that every week will show the effects of this consideration, besides additional reports being made as to the shortage of the manufactured article.

Bar Iron Higher.—The most important price to note this week is that affecting bar iron, which is now quoted at $3.35 base, Winnipeg.

Mild steel has also advanced in sympathy with iron, and the Winnipeg base price is now $3.75.

Brass Goods Climbing. — Jobbers advise that prices on brass goods are steadily climbing, this being shown particularly in their purchases of threshers' supplies. Increased prices have gone into effect on oil cups, grease cups, steam gauges, wrought iron pipe, pipe fittings, oils and greases, and it can easily be seen that by next fall the thresherman will have to pay what might be almost termed "fancy prices" for his various repairs.

Brass butts, plated steel butts and nearly all lines of padlocks are other lines which are showing revised prices.

Cotton waste is now quoted at 13½c per lb.

Brass snare wire in one ounce rings is another line greatly affected, as the price of 70c to-day will show.

WEEKLY PAINT DEPARTMENT

Preparing of Primers and Old Surfaces

Idea in Priming is to Fill, Seal Up and Satisfy Absorbent Surfaces—Paint Should be Used as Recommended by the Manufacturer—Old Painted Surfaces Should be Wire-Brushed or Burnt Off With Blow-Torch

Written for Hardware and Metal by F. J. Penberthy, Manager Lowe Bros., Ltd., Toronto.

WE have given an idea regarding the condition of the surface for new wood, but the repainting of old surfaces, on which many coats of paint have been applied, and a great many improperly applied, is the one problem that the paint manufacturer finds more troublesome than any other.

Invariably when paint fails on account of being applied on an improper surface, the dealer and the consumer show absolutely no reason in their arguments. It is always a case of "Brown's barn," which never happened to burn before. The last coat is blamed for everything when in fact the real trouble may have been with the first coat that might have been applied ten years before.

A short time ago a complaint was made on goods of a very reputable manufacturer. He sent his traveler to investigate the complaint and the traveler's report was not altogether satisfactory, so one of the officers of the company visited the job, brought back samples of paint and a full report of conditions. The statement made by the houseowner was that the house had been painted one year before; that there was a new addition, and the new addition had been primed with white lead in oil, and had received two coats of this manufacturer's paint. The investigator questioned closely and found that the entire body of the house was in fine condition but this new addition that had been "put up only one year," and then "was primed with white lead and oil and finished with two coats of his paint" had failed dismally. The samples of paint brought in to the manufacturer did not coincide with the statements made by the consumer. They were sent to the laboratory and photographed and instead of finding the three coats of paint which the houseowner claimed there were thirteen coats found. Upon further investigation the manufacturer found that the new addition which had been put up one year had been made out of old lumber and it was the scales and failures of past paintings that gave the manufacturer so much trouble and which cost him nearly $200 in investigations.

Dealers should co-operate with the manufacturer in investigating complaints, because it seems that the paint business is something like the railroad business—everybody is willing to condemn it and try to get something for nothing.

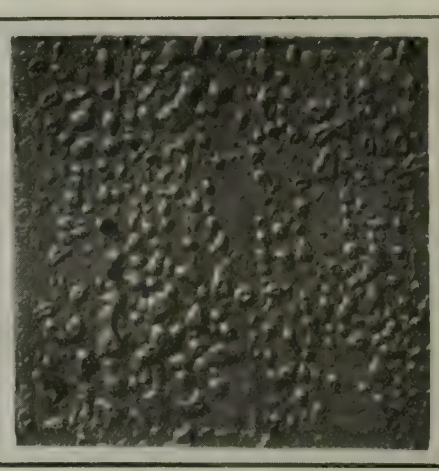
The idea in priming a board is to fill, seal up and satisfy the absorbent portions of it with paint and also to avoid leaving a surplus of paint upon the young growth or non-absorbent portion. An even layer or foundation for subsequent coats can only be secured by rubbing out the primer coat well, both on to and into the wood.

Manufacturers of high grade paint aim to produce a paint that will cover general conditions. The paints are tested and proved before being put into the cans and sold to the dealer. If the manufacturer's intentions are honest and the merchant feels that he is dealing with a responsible, reputable manufacturer of good paint, the manufacturer's responsibility should end when the can is sealed ready for the market.

Use Paint Without Fixing Up

There can be and are added innocently a great many things that can be harmful to paints, and my advice to the dealer, painter or consumer is, when in doubt, use the paint as it comes from

Comparison of two paints, one containing a small amount of drier and the same paint containing a large amount of the same drier. The test was made in three-coat work and exposed two years on the roof. The one containing the large amount of drier has perished and scaled and has ceased to be a preservative coating.



Blistering of paint as shown above is caused by moisture back of the paint film, the result having been secured through the influence of artificial heat. The paint is often blamed for blistering when it is seldom at fault in this respect. It is always the result of vapor or gas generated under the influence of heat.

If all or a portion of the surface is absorptive it may suck or pull enough of the liquid from the pigment to cause the paint to dry flat. Had the painter in the instance shown in the illustration brushed his primer better or had he allowed it more time to dry and harden, such a condition would not have developed.

BRUSHES and BROOMS

the manufacturer. Do not recommend the addition of anything not specified on the paint manufacturer's color card. A great many dealers will tell the consumer to add a little boiled oil, a little drier, a little varnish, or a little something else, and at times the dealer does not know whether that which he specified shall be added is suitable for the particular paint or the particular job, and therefore it is best to either study the matter up from the literature furnished by the manufacturer or take a chance and let the paint be used as it comes in the can.

Driers Put In by Manufacturers

Paint users seem possessed to add driers to paint. The manufacturer has already done this and under ordinary conditions he has added sufficient to produce the drying qualities necessary for that particular paint.

Paints may dry dust free, tack free, hard, elastic and brittle. With oil paints, such as ready-mixed paint handled by the dealer, the manufacturer's aim is to make his material so that it will produce a film that is both tough and hard. An excess of drier may retard drying instead of hastening it.

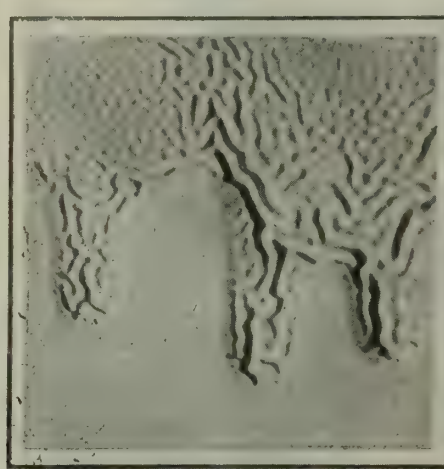
Ochre Not a Good Primer

A great many paint failures are due to improper primers. It took the manufacturer about 20 years to find this out.

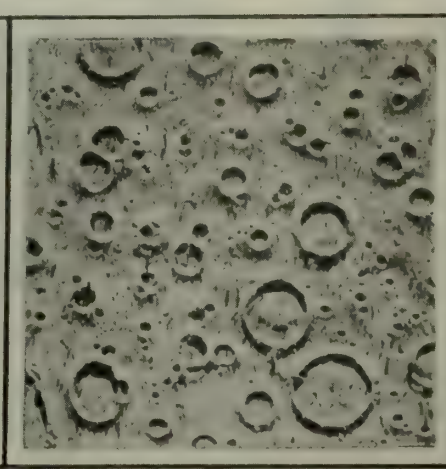
The best primer for an outside job is the one recommended by the manufacturer, which is usually a high grade ready-mixed paint thinned down with a certain proportion of linseed oil and turpentine. The dealer should discourage all other primers, not only for his own benefit but for the benefit of the consumer and the manufacturer. The better the results obtained from the use of paints which the dealer sells, the greater grows his reputation as a handler of good goods, and the larger his bank account becomes on account of repeat orders that come to him.

Great care should be used in recommending a primer, as it is the foundation that must hold up succeeding coats. No one would think of putting a heavy structure on a weak foundation, and this applies to "paint primer" as well as it does to the masonry of any building.

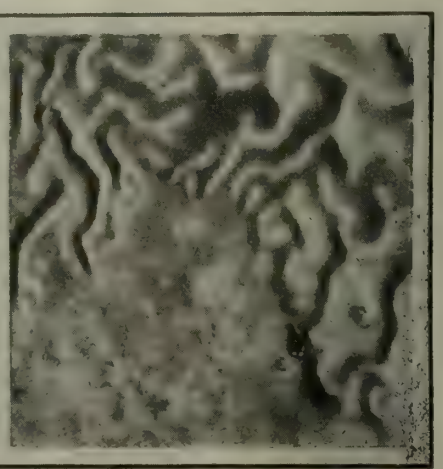
(Concluded in next week's issue.)



Sagging is often caused by leaving excessive paint in places not easy of access, such as the corners and under edges of clapboards. Runs and drips should be well wiped up to prevent this.



Examination of the above surface proved conclusively that there was a very hard, beating rainstorm during the time the house was being painted. The beating rain came down on fresh paint and the drops are plainly printed and photographed on the hard paint film.



Wrinkling is a defect usually caused by the application of too much paint. It may also be a defect inherent in the paint itself, because of its containing an excess of oil. All paints shrink or contract in drying.

WEEKLY PAINT MARKETS

(Continued from page 46.)

increase in cost of barrels is expected to affect price of turpentine to some extent. Local demand is light and stocks are low. The following prices are being quoted for turpentine in Toronto:—1-barrel lots, 79c; 2 to 4 barrels, 78c, and 5-gallon lots, 86c per Imperial gallon.

Resin.—Prices of common resin, grades G. H. and D., are firm and rather higher, and a further advance is expected. Other grades, such as W.G. and W.W., are weaker, and prices have declined. There is a good demand for the common resins for shrapnel shells. It is reported that one interest has practically cleaned up the Jacksonville market on dark grades of resin, having bought 7,000 barrels probably for munitions.

White Lead Advances—An advance in the price of white lead in oil was predicted in Hardware and Metal last week, and was based on the situation in the pig lead market. Since then, however, the lead market has reached a record level, and has affected white lead proportionately, the new price being $2.25 higher than last week. All quotations were withdrawn for a few days previous to the new price going into effect. The whole situation is unprecedented, and it is difficult to say what will happen, but if the pig lead market continues to go higher, white lead will advance again. There appears to be little doubt that there is a great shortage of lead owing to the war and accompanying wastage of this metal, which, unlike copper, cannot be recovered to any important extent. Pure white lead in oil is now quoted at $13.95 in ton lots, with 30c extra for smaller quantities.

Mixed Paints.—If white lead remains for any length of time at the present high level, and it will probably do so, prices of mixed paints are more likely than ever to advance. The market has developed new strength, but quotations are unchanged in the meantime.

Arsenate of Lead.—New prices have been issued for arsenate of lead, and are approximately 10 per cent. higher than the old schedule. The high cost and scarcity of lead and chemicals was the reason for prices being withdrawn and then advanced.

Gasoline.—The market continues very strong, and higher prices are anticipated in the near future. Pennsylvania crude oil advanced to $2.60 per barrel, but Canadian crude has not changed yet, although it will no doubt do so. Gasoline is unchanged at 32c, and benzine at 31½c per gallon.

Glass.—The market is firm at the advance announced last week, and business has improved a little. Makers of sheet glass in the States have again raised their prices, which may ultimately affect this market.

Putty.—Prices are unchanged and firm. The following prices are being quoted for Toronto for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, in casks	$2.65
Bulk, in 100-lb. drums	2.85
Bulk, in 25-lb. drums	2.95
Bladders, in barrels	3.25

Pure putty, 70c per 100 lbs. advance.

THERE'S PROFIT IN SELLING THE "1900" LINE OF WASHING MACHINES

To be thoroughly profitable to the dealer, an article must measure up to these two requirements:

1st:
It must provide a reasonably large profit per sale.

2nd:
It must have merit sufficient to enable the dealer to make sales easily.

One of these recommendations alone sh uld not be sufficient to interest you. Both are needed for real profit. Both are provided by

The painter knows

when he uses Liquid Granite on a floor, that the finish will satisfy the most critical. He knows by long experience that it not only produces a beautiful soft lustre, but resists the hardest usage, and is easily kept in good condition.

During the 58 years we have been making varnishes, the label of Berry Brothers has come to be regarded by all classes of consumers as a guarantee of quality and a sure protection against inferior finishes.

It is this feeling of friendly confidence that makes Liquid Granite and all other Berry Brothers' products so desirable to recommend and safe to handle.

Among our Finishing Specialties for which the sale is large and continuous are:

LUXEBERRY WHITE ENAMEL—whitest white, stays white Makes permanent snow white finish in either gloss or dul. effects.

LIQUID GRANITE—floor varnish. Makes smooth satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms, window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH—for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR—for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes handsome finish, and will not turn white under the severest conditions of wear.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 24.—An advance on white lead in oil of $2.25 per 100 lbs. is not only the outstanding feature of the paint markets of the week, but the most striking development in the trade for years; it raises the price to $13.80 on a ton lot basis, a level which has not been equalled in the history of the Canadian paint business so far as the present generation of manufacturers are aware. The rise follows abnormal developments in the lead market, and even at the price quoted conditions are so uncertain that orders accepted are for immediate delivery only. The quotation given compares with a price of $8.25 before the outbreak of the war.

A direct effect of this increase in the cost of lead is that the situation with regard to ready-mixed lines has been intensified. Even on the former basis the outlook was for higher prices at the end of the spring campaign, and adjustments were looked for about the 1st of May. Should the lead market show no material reaction, the increases will not only be greater than had been anticipated, but there is some question as to whether the present prices will continue throughout the month of April. However, the trade may take it that makers will defer action until the usual period for consideration of adjustments if conditions will at all permit them to do so.

Reports indicate that business is brisk, but this rather refers to spring deliveries, which have been moving earlier than usual, than to new orders. Deliveries will be heavier after the 1st of April, and on until after the opening of navigation, about the middle of the month, at which time there is a big movement of bulky goods, such as oil, turpentine, gasoline, etc.

Oil a Little Easier.—There is a somewhat easier feeling in the linseed oil situation, as is indicated by the fact that one big firm has dropped its quotation, 2c, to a basis of 95c and 98c, for raw and boiled respectively. However, the bulk of quotations remain at 97c and $1 for raw and boiled respectively, and one firm still holds to $1 and $1.03; but these latter figures are liable to immediate change if the flax market does not stiffen. Montreal basis may be regarded as follows:

	Raw.	Boiled.
1 to 2 barrels	95c-97c	98c-$1.00
3 to 5 barrels	94c-96c	97c-99c
6 to 9 barrels	93c-95c	96c-98c

White Lead's Performance.—For several weeks past in recording advances on white lead, Hardware and Metal has emphasized the fact that the increases in price made were not as great as warranted in relation to the soaring figures of the pig market. It was pointed out that dealers were taking into consideration the fact that the price was already high, and that there was little buying being done. However, following further sensational advances in the pig market, which brought out some buyers, dealers evidently decided to readjust quotations to a proper level, with the result that the price was put up $2.25 to a basis of $13.80 for ton lots and $14.10 for less than ton lots—figures which establish a record within the memory of local manufacturers. And not only has this abnormal price been established, but notice has been given that, owing to the abnormal conditions prevailing, no orders can be booked at this price, quotations being for immediate acceptance and shipment only. Booking will only be accepted for delivery at price prevailing at that time.

Gasoline is Strong.—At advanced prices the gasoline market is very strong and higher quotations are looked for. In fact, the prediction is made that adjustments to higher levels may be expected from time to time so long as the war continues, with prospect of maintained high prices for some time after its conclusion. Dealers are preparing for the heavy spring deliveries, which commence with the opening of navigation, about the middle of April, and these deliveries are expected to be better this year than they were last. Quotations follow:

Gasoline, in barrels	33c
Gasoline, in drums	30½c
Gasoline, tank wagon	30c

Benzine ½c lower.

Dry Colors.—The situation as regards dry colors continues very unsettled, with prices strong at recent advances. Some colors, like chrome yellows, have been affected by the abnormal conditions in the lead market, while the exhaustion of certain chemicals is gradually reducing the supply and increasing the cost of others.

Arsenate of Lead.—New quotations for arsenate of lead have been announced, following the withdrawal of prices a couple of weeks ago. They are shown in an accompanying panel.

Paris Green.—The situation in regard to the supply of Paris green is said to be acute with the prospect that anything like normal consumption there will not be sufficient to meet demands. So far the opening prices hold, but the outlook is that buying on an ordinary basis will have the effect of materially enhancing values. Shortage of certain required chemicals is the cause of the difficulty.

Advance on Glass.—Following advances on glass in the United States there has been a readjustment of the discount on the Montreal list. The new discount on quantities up to 35 cases is 25 and 5 per cent., as compared with 30 and 5 per cent. previously in force. Dealers here report that the increase made does not cover the actual higher cost of importation, and state that further adjustments to higher levels are to be looked for.

Red Lead Goes Up.—With the upward movement of the lead market there has been a pronounced advance on dry red lead; the recent advances cover about 3c. Casks are now quoted at $13.50 and kegs at $13.87½.

TORONTO

TORONTO, Ont., March 23.—The sensation of the week has been the big advance in the price of white lead. Those who have followed the pig lead market and Hardware and Metal's market reports expected that white lead would be affected. New prices on arsenate of lead have been issued, being about 10 per cent. higher than the old schedule. Linseed oil and turpentine are unchanged. Turpentine, however, is firmer and may advance. Gasoline is very firm, and although unchanged locally, higher prices are looked for in the near future. An advance in ready mixed paints appears more likely, now that white lead has reached such high level. Business has been rather quiet this week, being between seasons. Warmer and dry weather would stimulate business.

Linseed Oil.—The demand for oil continues light, but an improvement is expected as soon as the weather becomes more seasonable. The flax seed market is weaker, but no seed is coming East. A considerable quantity of Argentine seed is coming to New York, but the same seed laid down in Canada would not affect the local market to any material extent as regards price, although it would increase available supplies. The linseed oil market has a weaker tendency, but prices are unchanged. Oil is being quoted in Toronto as follows:

	Raw.	Boiled.
1 to 2 barrels ...	$1.02	$1.05 per gal.
3 to 5 barrels ...	1.01	1.04 per gal.
6 to 9 barrels ...	0.99	1.02 per gal.

Turpentine Firmer.—The turpentine market is firmer and higher in the South and stocks are becoming depleted. It is reported that the new turpentine may come in later than usual owing to the unfavorable weather in the South. The

28 gauge	3 80	3 80

Re Gauges of Sheets.
In the quotations which follow on sheets, it is advisable to note that Queen's Head, Fleur de Lis. and Gorbal's Best Best, also Colborne Crown are English gauges, while Apollo and Premier are U.S. gauges. American 10¾ oz. is the same as English 28 ga.; American 28 gauge is the same as English 26 ga. The heavier gauges are almost identical, the English sheets running slightly lighter than the U.S. standard.

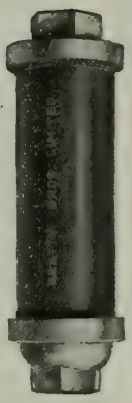
BT STANDS FOR B-S BT STANDS FOR B-S BT STANDS FOR B-S BT STANDS FOR B-S

BT

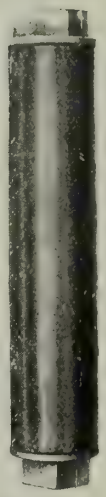
BT Brass-lined and brass body cylinders have poppet check valve.

Caps of brass body cylinders are galvanized and all fittings are either brass or galvanized iron. Valve seats are brass in all BT cylinders, not only in brass-lined and brass body, but in iron cylinders.



Caps are deeper and have more threads than formerly, and all brass bodies are extra heavy and have specially cut, strong threads.

The cage is malleable iron. It will stand any strain in deep well work and cannot be broken when it is being separated from the follower for new cup leathers, or by screwing it tight in the plunger stem.



The Best Pump Cylinders

The BT Ready-to-ship idea has been applied to BT cylinders. We are turning them out in quantities, Factory costs have been cut down. As a result, we are able to offer the trade the best pump cylinders ever sold in the country at prices far below any others. In view of the greatly increased costs of raw materials, particularly brass, our prices on cylinders are truly remarkable. Get our pump catalogue for 1916. It will make money for you in your pump business.

"LINGERWETT" Paint and Varnish Remover

It's a labor saver—stays wet and cleans quickly

Most removers dry so quickly that the use of them entails much labor, resulting in only medium results.

"LINGERWETT" stays wet for several hours, and perfect results can be obtained.

Cuts rapidly—nothing can stop it; Paint, Varnish or Shellac come away freely, without staining the wood or lifting the grain.

No Knife Scraping Necessary—No Wash Needed

The Dougall Varnish Company, Limited, Montreal

Branches at 48 Colborne St., Toronto, Ont., and 167 Pender St. West, Vancouver, B.C.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

JOS. LEPROHON
71 ST. JAMES ST. MONTREAL

The Aylmer Superior Lever Lift Pump

fitted for hand use. Has close revolving top and handle bearer, full six-inch stroke, wood handle, and is easy working.

This style of lever and fulcrum has several advantages over the ordinary style. Having short stroke, the power is greater, making it work easier. The handle, being wood, they are not so liable to break in frosty weather. Readily converted into a Windmill Pump.

Built for long duty under severe service.

A good profit-maker.

Aylmer Pump and Scale Company, Limited

TEL. CONNECTION 1136-1140 MAIN STREET

Hartford Conn., Jan. 11, 1916.

Pratt & Lambert,
Buffalo, N.Y.

Dear Sirs:

When we started handling Pratt & Lambert Varnishes eight years ago, our first order amounted to Five Hundred Dollars. Previous to that time we had carried more or less lower price goods which were good value for the money, but we found that by handling Pratt & Lambert Varnishes we could get more trade and better trade that paid us handsomer profits and meant better satisfied customers.

As a result our first order has grown from Five Hundred Dollars to Fourteen Thousand Dollars that we are now buying in carload lots. "61" Floor Varnish and Vitralite sales particularly have shown a nice increase from a few cases a year at the start to several hundred now.

We believe the high quality of Pratt & Lambert goods plus your plan for helping us sell them is largely responsible for this showing.

The magazine advertising makes your varnishes well known to everyone, while your promotion work with architects makes them friendly towards your goods with the result that we have an opportunity to get the business on most construction work in this vicinity. Your plan of reaching home builders and small construction work through letters and helpful literature is a distinct help to us.

We enjoy a good painter trade on Pratt & Lambert Varnishes. The goods have always been well and favorably known to painters, and your little painters magazine "Varnish Talks", does not let them forget the merits of Pratt & Lambert Varnishes.

All this co-operation tied to our store with the attractive store and window display matter, slides and electros, we feel is helping us to get our share of the varnish business in this territory.

We are more than pleased with our success with your line and expect to continue to increase our sales on your goods as much in the future as we have in the past.

Very truly yours,
THE HOFFMAN WALL PAPER COMPANY.

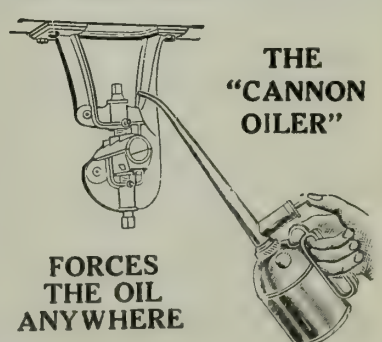
"The Canadian Newspaper for Investors"



THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Easy Seller Because—

It is **exceptionally convenient, quick acting** and **an oil saver.**
Just what meets a long-felt demand for an oil can in which oil is entirely controlled by the operator in whatever position the can may be held. Not a drop of oil need be wasted, as the flow of oil stops the instant the pressure on the plunger stops.
A sure good sale and splendid profit. Order it now.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED—A GOOD SALESMAN CALLING on hardware dealers and painters, also a good railroad salesman, to take a well-known paint specialty line on commission. All enquiries treated confidential. Apply Box 260, Hardware and Metal. (tf)

WANTED — POSITION AS HARDWARE clerk, with Western experience; steady employment. Can furnish best of references. Box 253, Hardware and Metal. (14)

WANTED — LIVE REPRESENTATIVE TO sell our lines on commission in the City of Montreal and Province of Quebec. Must have good connection and be able to produce results. Apply to N. M. Currie, Managing Director, St. Mary's Wood Specialty Co., Limited, St. Mary's, Ont.

POSITION WANTED

FIRST-CLASS TRAVELLER IS OPEN FOR position with good firm. Has excellent conection with hardware trade in Eastern and Northern Ontario. Address Box 266, Hardware and Metal. (13)

EXPERIENCED HARDWAREMAN, THIRTY years of age, served five years as manager and buyer for a Toronto firm. Wishes position as manager or traveller. Has good buying connection all through the States. Box 268 Hardware and Metal. (13)

WANTED—POSITION BY EXPERIENCED paint and varnish salesman. First-class connection over Eastern and Northern Ontario. Apply Box 271, Hardware and Metal. (13)

FOR SALE

FOR SALE — GENERAL HARDWARE IN best farming and manufacturing district of New Ontario. Only reason for selling is poor health. Stock $10,000. Will accept special rate and good terms for quick sale. Apply L. C. Wideman, Charlton, Ont.

HARDWARE SITUATED IN TORONTO IN downtown section. Four thousand dollar stock. Box 267, Hardware and Metal (13)

FOR SALE—HALF INTEREST IN HARDware business in a fast growing suburb of Toronto. A fine opportunity for a progressive young hardware man capable of managing store. Will sell outright if desired. Apply Box 272, Hardware and Metal. (13)

FOR SALE — HARDWARE BUSINESS IN Southern Saskatchewan, in one of the best wheat growing districts in the province. Town has three elevators, and good territory to draw from. No opposition. Good store that can be rented cheap. Stock and fixtures, about $3,500.00. Owner has another store, and cannot look after the two. Apply to Box 270, Hardware and Metal. (16)

HARDWARE BUSINESS FOR SALE, DOING good business in Northern Ontario town. Best agencies held; well assorted, clean stock. No real estate, good stand, moderate rental. Reason for selling, discontinuing retail business. For further details write Box 269, Hardware and Metal. (13)

TWO HARDWARE STOCKS AND GOODwill, well established, in two of the most promising towns in New Ontario; territory opening up rapidly; value of stock in first store $10,000; value of land and dwelling, $5,000. Second store, $5,000 stock; $7,000 buys stock, land and building. Terms. Business being sold on account of death of owner. Apply Box 184, Cochrane, Ontario. (11)

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

In Demand

There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA Glass Tank Sprayer

The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover. The pump cylinder is made from L. X. tin and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock. Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a BETTER profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

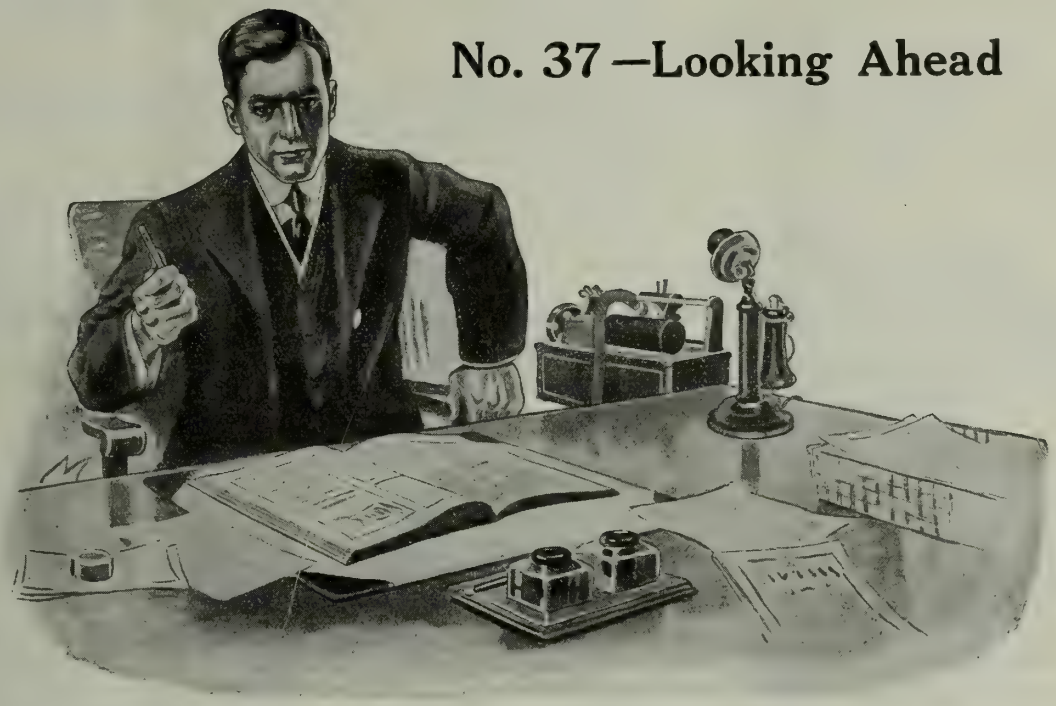
A Straight Talk from the Manager

No. 37—Looking Ahead



In every issue of Hardware and Metal you will find advertisements to interest you, even though, at the moment, you may not be in the market for any of the articles advertised. It will benefit you to know all you can about those articles. Inside of a day or two you may have a chance to sell some of them. A letter or even a post card sent to the advertiser will bring you complete information.

When you answer advertisements and mention that you saw them in Hardware and Metal, you are encouraging the advertisers to keep you constantly informed of new lines that they are placing on the market, or new ideas about selling goods.

You are not only helping yourself, but also the manufacturers and jobbers who advertise and you are helping Hardware and Metal to still further extend its service to the Canadian hardware trade.

J. G. L.

Let the War Increase Your Rifle Sales

Owing to the war the demand for an accurate and reliable target rifle is steadily increasing.

The Ross .22 Cadet Rifle has all the qualities of an ideal small target rifle. It is accurate, reliable, well-finished and strongly built.

It is endorsed by the Canadian Government who have adopted it for use in all Canadian Cadet Corps. Retails at $12.00.

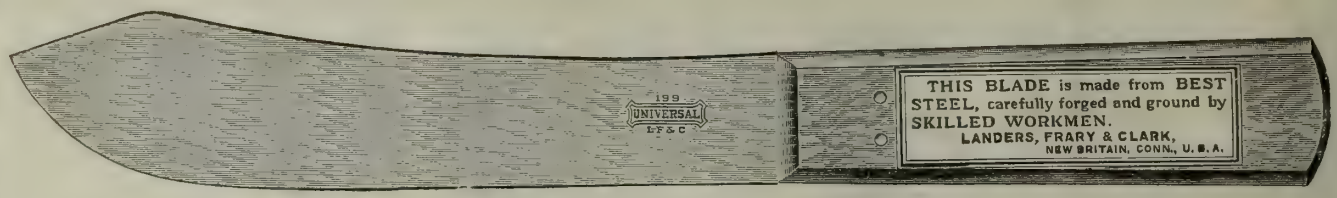
BUTCHER KNIVES



No. 2000 COCOBOLO HANDLES

SIZES 5 INCHES TO 14 INCHES

"UNIVERSAL" CUTLERY

offers you an opportunity for concentration on a line which you can stand back of and recommend to your customers, a line in which "chance," "maybe" and "perhaps" have no place. From the time of its conception, over half a century ago, quality has been the watchword in the manufacture of UNIVERSAL Cutlery.

¶ UNIVERSAL Cutlery is a complete line, from Paring Knives to Carvers, from Pocket Knives to Barber's Shears. All sold and guaranteed under the UNIVERSAL Trade Mark.

¶ When you show a customer UNIVERSAL Butcher Knives, Pocket Knives, Razors, Shears, Kitchen Knives, Carvers, etc., no time is lost in explanation of who makes them, and there's no doubt in his mind as to their quality. Nine chances out of ten he's using several UNIVERSAL appliances in his home right now.

The Advertised Cutlery Line

¶ UNIVERSAL Cutlery is nationally advertised. You don't have to create or wait for a market—it's waiting for you.

¶ Buyers of unknown, unbranded cutlery are getting fewer and fewer. People want the kind they see advertised, that bears the trade-mark and guarantee of a well-known, reliable manufacturer.

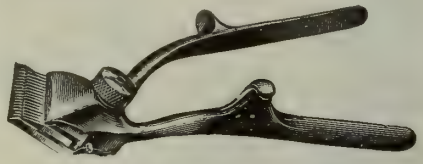
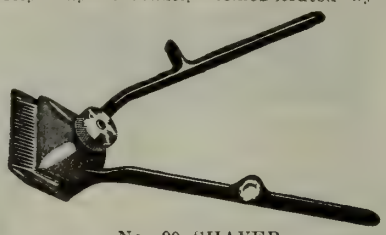
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

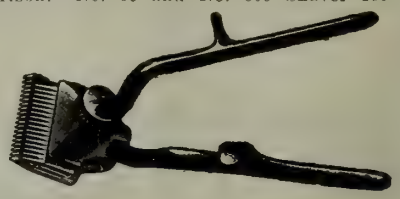
present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.



No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.

SASKATCHEWAN

Where Everyone is Quick to Grasp Opportunities

Hardware Dealers in Saskatchewan

FOR the last few weeks we have been telling your farmers about GRIFFITH'S HORSE SPECIALTIES in little ads. like the one in corner of this page. The results have been so promising that we hasten to tell you about them. Practically all lines are represented in the enquiries but the line that stands out as the one to fill the great big demand is the GIANT ROPE TRACE. It is no cause for wonder when you stop to consider the amount of equipment that is needed to put in the next season's crop, and the very high price of All-Leather equipment.

HERE ARE SOME OF THE ORDERS RECEIVED:

GRAVELBURG.—Enclosed find $4.50, for which send one set of GIANT ROPE TRACES. T. Dokkebakken.

GLADWIN.—I am enclosing $4.50 for one set of Giant Rope Traces.—D. G. Barthwick.

LOVERNA.—Please send me Catalog of Rope Harness, also set of Rope Traces, for which I enclose $4.50, with 25c extra exchange added.—Frank Polley.

SPY HILL.—I am enclosing $4.50, as per advertisement, for one set of Giant Rope Traces.—J. Davis.

SWARTHMORE.—Please send at once, one set of Giant Rope Traces. I am enclosing $4.50, the advertised price.—Jno. Simmonds.

In not one of these cases did we have a dealer to whom we could turn in the orders and we had to make direct shipments.

SPECIAL NOTE.—In order to give prompt deliveries, we are carrying stock in Saskatoon, and while they last we can ship the GIANT ROPE TRACES to Dealers at $3.00 per set. A splendid chance for a good profit on a quick-selling line. The price F.O.B. Stratford is $2.75 per sent.

The following are some recent enquiries which we have received from interested farmers. Can you arrange to follow up any in this list?

The Maytag Multi-Motor Washer

Announcement Extraordinary!

What the Maytag Multi-Motor Washer Will Do

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

The Clipping Machine your Customers Know and Like is this

Stewart Ball Bearing Machine

Stewart No. 1 Ball Bearing Enclosed Gear Clipping Machine in Operation

It sells to the user in Canada for only $9.25

The only satisfactory machine ever offered at the price.

The QUALITY machine, above all others. You can sell more of these machines than of all others put together. Stewart machines are not thrown back on your hands. They please the buyer and help sell more.

A clipping machine that won't cut, nor continue to cut, is a nuisance. It angers your customer, shakes his confidence in you, and spoils your trade.

That never happens with Stewart machines. That's why every jobber carries them; that's why they add to your prestige for selling **GOODS OF QUALITY.**

If you want the cream of the clipping machine business, sell the Stewart Ball Bearing Machine.

Each year we spend more to help dealers and jobbers sell Stewart machines than the gross sales of all other clipping machine makers amount to. That's real co-operation.

Stewart machines cut keenest and last longest. Each Stewart must satisfy the user, or all money paid out will be refunded.

All jobbers have Stewart machines. Order now, and write us for supply of "Helps to Sell" more of these splendid machines.

A Lesson About Safety

A talk you can have with a customer—

Q. Do you recognize the necessity of having a firearm for home protection?

A. Yes.

Q. Do you own a firearm for that purpose?

A. No.

Q. Why?

A. I would if I knew that I could buy a gun that was positively s——

Q. Stop right there, sir! You're going to talk about safety, and right here is the answer to the safety question—the Colt revolver. The Colt Positive Lock (see circle) consists of a bar of solid steel, which stands between the face of the hammer and frame—the firing pin, therefore, cannot touch the cartridge until the trigger is *purposely* pulled. The Colt is the *made safe* revolver. There's no reason now why you should be without a revolver for home protection.

And don't forget that COLTS are ACCURATE. They won 1st, 2nd, 3rd and 4th places in the REVOLVER CHAMPIONSHIP 1915.

Canada's First Toy Conference

Exhibit of Toys Under Auspices of Department of Trade and Commerce Shows Great Possibilities for Canadian Manufacturers—Sir George Foster Present at Opening—Makes Important Announcement

A START has been made in the direction of linking together the various interests connected with the toy industry in Canada for the purpose of developing it to take advantage of the immense field thrown open as a result of the war. A strong organization of manufacturers and buyers was effected at the opening session in the Royal Bank Building, Toronto, and the foundations were laid for a growth that is expected within the next year or two to reach enormous proportions. In other words, Canada in this industry is preparing to appropriate to herself the commerce that lay mainly before in the hands of Germany and to this end some of the industrial methods will be employed that gave to Germany her undisputed supremacy in so many directions previous to the war.

More important than the organization of this one industry, however, was the announcement made by the Minister of Trade and Commerce, the Hon. Sir George Foster, who presided at the conference, that the toy makers might be assured of all reasonable protection that could be granted by the Government in order to prevent the business from passing again into the hands of Germany. This statement was a general one, and may be taken toapply to all other lines of industry, and to include in its scope not only the Government of Canada, but of all the members of the Entente. This statement should set at rest the serious misgivings that have heretofore checked the development of industries not only in Canada, but in Great Britain and all other parts of the Empire.

Annual Toy Fair in Canada

At the Toy Fair not only was there a combined committee of manufacturers and buyers appointed, and organized, but it was decided to hold an annual toy fair, which the buyers from all over Canada, and it was hoped, the United States and Europe, would in time attend. An attempt will be made to have the basis of manufacture brought down to a more definite ground through having orders placed as far in advance of the season of delivery as has been done in the past in connection with the big fair at Leipsic. The manufacturers were impressed by Sir George and by the buyers who spoke with the absolute necessity of delivering goods in time, and also with the strong feeling there was against the turning out of anything in the form of a "monstrosity." Representatives of two of the largest department stores in Canada pointed out to the manufacturers certain definite lines in which their products now were quite up to the mark required and in other cases where some improvement is needed, and a few others where various conditions made it probably impossible for them to compete successfully with outside countries. In this way the wide experience of the buyers will be placed at the disposal of the manufacturers through the conferences of the special committee that was appointed.

View of Room No. 2, First Toy Exhibit o f Canada, showing Fine Exhibit of Dolls. The exhibit of dolls was most creditable.

The exhibits and attendance at this opening fair were alike a surprise to all concerned. The exhibits, which will be described more in detail later, showed a surprising variety of toys and also a very commendable quality. The attendance itself was very close to the 200 mark and represented a large number of buyers from the principal cities of Ontario and Quebec, while several score of manufacturers were represented. The first week of the fair is being devoted to trade and the second week it will be thrown open to the public.

View of Room No. 3, First Toy Exhibit of Canada, showing mechanical toys and design of soldiers in trenches. This latter scene was worked out with great care and minuteness.

Work By Soldiers and in Schools

Some important developments may be expected in regard to the area of manufacture. It is intended to have a certain amount of the work done in the homes, possibly in the schools, and also to bring in the services of as large a proportion as possible of the returned soldiers. Already steps to this end have been taken in connection with the Handicrafts Council of Quebec, which was represented by its president and secretary at the conference.

In his opening address Sir George Foster expressed his pleasure at the cordial response which was made to the efforts of his department.

"Canada possesses every essential for the production of toys, not only for her own use, but for export as well. This matter should be taken into calculation in connection with the work of organization."

Does Not Believe in Monstrosities

He urged the toy makers to think not only of the financial benefit to themselves, but of the human side; they should endeavor that the child life in Canada should not be barren and unprofitable, but should be full of delight.

"I do not believe in toy monstrosities," he said, and was cheered. "Let us keep monstrosities and aimless things out of the toy business." Toys might be made one of the finest fields in the education of the children of Canada. The best kind of amusement for old and young as well does not simply amuse, but invokes something which is higher than amusement. The idea of killing time he would like to see "banished to the lower Hades.

"No man has a business to kill time in this country. Canadian toys should not only amuse, but educate and instruct and have in them also something of a national flavor."

"The making of toys is an industry that might be extended from the factories to the homes and the schools, as is done in parts of Germany and Austria," he said. Work could even be done during the long winter in the farm houses, but care must be taken in all these directions to avoid the growth of sweat shops. There was also great work to be done in connection with providing employment for returned soldiers, and the toy industry opens up great possibilities for this.

Sir George assured the makers that he had received a large number of communications from ladies in Canada, whose interest had been aroused in Canadian toys for Canadian children, and this interest if developed would prove of great advantage to them in disposing of their goods.

P. H. O'Neil brought his 21 years' experience in connection with the toy department of the T. Eaton Co. into his address. He opened by expressing the wish that the tariff could be made so high against German goods that none could be got into Canada after the war, a sentiment which brought enthusiastic applause. He hoped that this was the first of a long series of toy fairs by which toy buyers would be brought to Canada from all parts of the world, and that it would mean that toys previously bought in Germany would be purchased in Canada.

Dolls the Most Popular of Toys

Dolls are the greatest in demand of all toys, he said. The doll industry in Canada had been a decided success and all the parts are now being made here. Some of the heads are made of a secret composition, some of wood pulp, and a third of celluloid. Celluloid dolls have not yet been made in Canada, but other celluloid products were being brought out in West Toronto, and he believed that they could make dolls there of celluloid that would put those bought form-

Group photograph of Sir George E. Foster, Minister of Trade and Commerce, and editors of the Maclean Publishing Company after an interview with the Minister at Canada's First Toy Conference. From left to right are: H. S. Eayrs, editor of "Men's Wear Review"; H. H. Black, editor of "Dry Goods Review"; F. I. Weaver, editor of "Bookseller and Stationer"; G. D. Davis, editor of "Hardware and Metal"; Sir George E. Foster, Minister of Trade and Commerce; J. G. Lucas, associate editor of "Hardware and Metal."

View of Room No. 4, First Toy Exhibit of Canada, showing children's cars, dolls' beds and metal toys.

erly in Nuremburg "clean under in price." (Applause.)

No China or Bisque Heads

"I don't think we can manage china and bisque dolls' heads. These must be imported. It is a matter of a particular kind of sand that is required. There are only two countries that manufacture these—Germany and France. England can, but does not. Her manufacturers were afraid that after the war the business would revert to Germany again.

"We must continue to import these bisque and china heads, but all the bodies should be made in Canada."

Mr. O'Neill believed Canadian manufacturers could obtain the home market and also export goods. Toy furniture and building blocks were being skillfully made in Canada, and rocking horses with steel frames and papier mache bodies. He complimented the makers on the success of this line.

So far as mechanical toys are concerned the dies for making these are costly. Some are being turned out by Canadian manufacturers, but the only nation that could do so successfully he thought were the Japanese, where 10c of labor represents practically $1 in Canada. The Japanese prices on these goods, however, were going to advance 25 per cent.

In toy pianos, he thought, that the piano manufacturers could use their waste material for this. Toy bugles and trumpets have been made successfully in Canada, and he thought that mouth organs could also and there is a great demand for these. Toy sewing machines could be made in Canada, but not the cheap ones.

Sugar toys should be made here. There was a difficulty from the fact that the steel moulds for these had been made in Germany, but it was suggested that moulds could be made of wood pulp and he asked that the pulp men in Canada carry on experiments along this line.

Mr. O'Neill gave some practical suggestions to manufacturers in conducting their toy business.

Methods for Manufacturers

First.—German toys were never brought out in quantities until orders for these were taken in advance. The Leipsic Toy Fair was held on the first of March, and orders were received here before the goods were turned out. This should be the system in Canada. This would greatly minimize the risk of the manufacturer and it would be easier to interest capital with a sale assured before the goods were manufactured.

Second.—Manufacturers should ascertain exactly the cost of production and allow a reasonable profit. Two mistakes were frequently made by toy makers—one that the prices were too low, and the second that the prices were too high. The evil effects of both were obvious.

Third.—The manufacturer should deliver his toys on time. "Nothing kills business more quickly than the failure to deliver on time. If you deliver on time you get your money and possibly a repeat order. It is far better to be a week too soon, than one day too late."

Dealing with work by children, Mr. O'Neill thought that although the movement in Germany lately had been more towards factories, that children could work one or two hours a day. The toy industry could be carried on to a certain extent in the country during the winter.

Mr. Burton, of the Robert Simpson Co., who also has had a large experience was also very practical in his suggestions.

The toy makers of Canada, he said, should strive for perfection in form.

"My experience is that a monstrosity is not a seller." "A thing of beauty is a joy forever," was never more true than in connection with toys.

Plush and Felt Animals

"A large field lies before the Canadian toy maker in plush and felt animals, but attention must be paid both to the style and to the stuffing. Mere size is not valued by the child in the stuffed toy."

Musical toys, could, he said, be gotten out in Canada.

A very interesting statement was made by the president of the Canadian Handicrafts Guild of Montreal, Mr. Doble. It was in Quebec, he said, that the first attempt to plug up the hole against Germany was made, and he hoped it would be so well plugged up that no more German toys would come into this country.

Some very interesting statements were made by Mr. Doble as to the ready response made by the public to the toys that were turned out by the Guild, and also to the surprising ingenuity shown by the children of Quebec in devising new toys. A competition had been held last Sept., and a second one is being arranged for May. All of those shown by the Guild were handmade toys, and arrangements were being made for lecturers to go around to the different centres instructing the people on methods of toy making.

Mr. Doble also recommended the making of toys by returned soldiers.

"Perhaps this movement marks the passing of outrageously expensive toys in Canada," he declared. "We are teaching our people to live on a more moderate scale, and should accustom our children to get rid of extravagant ideas in toys such as they have had of late." He concluded by inviting the toy people down to Montreal after they had been set up in Toronto, "especially after it goes dry." (Laughter.)

Just as the conference closed a short statement was made by Sir George, sum-

View of Room No. 1, First Toy Exhibit of Canada, showing Children's Sleighs and other articles.

ming up the points dealt with by the various speakers.

"No man but the finance minister can tell what the duty on toys will be," he said, "and he never tells before he delivers his budget speech."

Promised Tariff Against German Goods

"But, you may depend on it, that the British Empire has had its eyes opened with reference to a war campaign that has been going on for many years under the guise of a peaceful movement." The Germans were getting the domination wherever it was possible with a view of being masters in the end. The British Empire had not understood this movement, but it did now.

"You may depend upon it that so far as anything reasonable and necessary will be done to guard against an unreasonable invasion of our economic system, and our productive interests will be looked after and guaranteed by the Government." He did not think that any attempt to veto action taken by the Imperial Government would be made in Canada.

He assured the toy men that the industry would be aided by the Government "to every reasonable extent," and he felt they did not want it supported to an "unreasonable extent."

This statement was necessarily somewhat indefinite, but contains a guarantee that there will be an arrangement made by all the Allies that would make it impossible for Germany to secure the domination she had previously in industrial circles and that reasonable protection would be given for the development of industries in this and other countries.

Sir George concluded by stating that the war had taught Canadians that there are many opportunities lying close to their door that they had not thought of before. "So many little things, spread over a country, become big things." They should mobilize their forces for the saving of waste and the increase of efficiency.

Committee Appointed

At the afternoon section the following committee was appointed for organization purposes:—Manufacturers: J. M. Appleton, John H. Chantler, J. E. Alain, M. E. Cone, L. V. Dusseau, Arthur Reede, F. W. Robinson, J. M. Woods, J. A. Wade, G. W. Botsford; and buyers, P. H. O'Neil, Chas. E. Speiran, L. C. Fortin, T. G. Ireland.

The convention was addressed also by T. B. Kidner, secretary of the Military Hospital Commission, to describe the work which is being done for 1,300 soldiers already in convalescent homes in Canada. Efforts were being made to provide some vocational training for these men.

Showing Toys at Fall Fairs

An effort will be made to have certain space set aside at the Canadian National Exhibition in Toronto each year for the showing of Canadian toys and also at a number of other of the larger fairs. In this way it was felt that the people of the country would have an idea of just what is being done and that this would help to popularize the products of Canadian industry.

Four large rooms on the eighth floor of the Royal Bank Building were completely filled with the exhibit. One of the notable features about many of the Canadian-made toys was their appearance of durability when compared with the German-made toys. There was an exhibit of German made goods for the purpose of comparison. In price the Canadian manufacturers will be able to meet the former German prices on some lines, and in looks and lasting qualities will be far superior. In appearance the German toys looked as though they were built to last a minute or two in the hands of good healthy children. On the other hand the Canadian-made goods impressed one with the idea that they would stand a lot of rough usage before they yielded up the ghost and were relegated to the scrap heap.

Some New Lines

Some new ideas were exhibited perhaps for the first time. They show in a measure the practical bent of the Canadian mind, and give evidence of the desire to see that the children are learned to be builders in their playtime. One of this class of toys is being exhibited by a Toronto firm in their manual construction building sets. From these small building slats it is somewhat surprising to see the number of houses, elevators, bridges, forts and towers which it is possible to erect. Another is a new mechanical wood toy which will be put up in small tin boxes in a take-down form, but which is capable of being put together in many different varieties of toys. For instance, there are the merry-go-rounds, the squirrel cages, the happy-go-rounds, the windmills, the turbines, wrecking cars, drawbridges—all of which can be made from the one set. They are made to be sold at a reasonable price.

EXHIBITORS AT TOY CONFERENCE

THOS. DAVIDSON MANUFACTURING COMPANY, LIMITED, Toronto.—Tin drums, doll trunks, beach pails, horns, enamelware sets for children, sand shovels, tin horses, dustpans, tin banks and picture cups.

HENRY WISE WOODENWARE COMPANY, Palmerston.—Flexible coasters, coaster sleds in 22 styles, swing chairs, croquet sets, kindergarten tables and baby cutters in a large variety of designs.

VICTORIA TOY COMPANY, Victoriaville, Que.—Children's toy dressers, bookcases, chiffoniers, in the natural grain wood, white enamel, paint and fancy designs. There were also rocking horses, rocking chairs, children's secretaries and writing desks, tea tables in yellow oak, white enamel and fumed oak, dolls' beds, building blocks in boxes with pictures.

GENDRON MANUFACTURING COMPANY, Toronto.—Toy wheelbarows, go-carts, dolls' cradles, sleighs, swing sleighs, bob-sleds, velocipedes, doll carriages, in white, grey, brown wickerware; children's foot automobiles in red, gray and black colors, some of the designs being quite fancy; combination baby chair and table with counting beads.

CANADIAN BUFFALO SLED CO., LTD., Preston.—Wagons, sleds, Quebec baby sleighs, rubber-tired artillery car, army service cars, children's rockers and morris chairs.

DOMINION TOY MANUFACTURING CO., LTD., Toronto.—Dolls in great variety—boys in khaki, Highlander boys, country lassies, Red Cross nurses, boys' Indian suits, building blocks, dominoes, sailing ships, target and darts.

UNITED STATES MADE ARTICLES.—For the purpose of comparison, toys manufactured in the United States were also on exhibit. These comprised scenic railways with cars and engines, yachts, rubber dolls, balls, whistles and little three-wheel kiddies' car, together with dolls.

FRENCH DOLLS.—A very fine exhibit of French dolls were on display, also for the purpose of comparison. These little make-believes were dressed in very artistic costumes. The dolls too showed the result of many years' experience in their manufacture.

GERMAN TOYS.—A big variety of toys made in Germany was displayed for the purpose of making a comparison. There were horns, tops, harnessed horses, enamelware sets, yachts, engines, cows, mules, lions, sheep, rocking horses and dolls. There was a general cheapness about the look of these toys. They had the appearance of being thrown together simply to get the money. Apparently there was no attempt made at durability. They looked like shoddy articles of an insubstantial nature.

NATIONAL TOY & NOVELTIES, LTD., Toronto.—This firm manufactures in all about thirty different styles of dolls of the unbreakable type, in khaki lads, Red Cross nurses, Highlander lads, sailor boys and Red Riding Hoods. Their display of dolls were quite extensive. They also manufacture a line of doll veranda hammocks.

SOREN BROS., Toronto.—A large variety of metal toy drums in various sizes.

CANADIAN CONSOLIDATED RUBBER CO., LTD., Montreal.—Baby's whistles, toy water bags, rubber bathing caps.

GENUINE PANAMA HAT COMPANY, Toronto.—Display of dolls' hats.

SLAVIC TOYS.—A display of toys used by Russian children was loaned for the occasion by Rev. Dr. Pisek, pastor of Jan. Hus Church of New York City. The variety of the assortment was not extensive and comprised such things as soldiers, swords, little farm lassies driving geese to water. The articles were few and simple in construction.

DAVID SMITH ENGRAVING & LITHOGRAPHING, Toronto.—Games entitled "Fighting with the Allies," and "Hunting the Huns."

TIP TOP DOLL COMPANY, Toronto.—Display of dolls in quite a variety of costumes, such as jockeys, soldiers and clowns.

COPP, CLARK CO., LTD., Toronto.—Games such as checkers, Ups and Downs, cribbage and an assortment of various flags.

JOHN A. CHANTLER & CO., Toronto. — Manual construction building sets, trimmed doll beds, celluloid rattles.

SHIMAMURA CO., LTD., Toronto.—Variety of Japanese-made toys.

RELIANCE TOY CO., Toronto.—Steel aeroplanes, derricks, ferris wheels, dredges, semaphones and bridges.

EMERY MANUFACTURING CO.—Toy cruisers, dreadnaughts, building blocks, toy guns and games.

McFARLANE LADDER WORKS, Toronto. —Rocking horses, go-carts, Teddy bears, wheelbarrows, express wagons, dolls' tea sets, aeroplanes.

Meeting Mail Order House on Stoves

Revolutionary Methods Adopted by Stove Firm as a Result of Severe Mail Order Competition—Why Do Mail Order Houses Prosper?

THE announcement by the Gurney Foundry Co., Toronto, of an entirely new sales policy on stoves and ranges, created to meet conditions which have developed with alarming rapidity during the past few years, is an indication of the seriousness with which one of the largest stove manufacturing firms in Canada views the mail order menace. The new policy of this company is revolutionary as far as the stove trade in Canada is concerned. In the first place a scale of prices has been determined, applying to every domestic stove or range. By this plan the smallest merchant, who buys only a limited number of stoves will secure the same price as the largest buyer. This means one price to all, without exceptions.

The company has also decided on resale prices applying to the same stoves.

The resale prices will be for goods delivered in the East, and f.o.b. Winnipeg, Vancouver, and f.o.b. for the West. The resale prices are for cash, but the hardwareman can make additional charges for credit, cartage, setting up, etc.

Provision has been made to meet the common form of mail order competition in the way of leaders. By following these plans the company aims to place the small merchant in a position to compete favorably with his large competitors.

Catalogues have been issued by the company featuring domestic stoves and ranges in three editions, one for the East and two for the West. Resale prices on these lines will be featured in the catalogues together with illustrations and description of the goods. An effort has been made to make the catalogues up in such form that they will be more interesting to the consumer than the stove sections in any of the mail order catalogues.

The matter of mail order competition has during recent years been a serious problem for retail hardware merchants especially those in the smaller towns throughout the Dominion.

At practically every gathering of retail hardwaremen during the past few years, the question of mail order competition has been brought up for discussion. Many merchants have complained bitterly about the severity of the mail order competition. Others are doing their best to meet the competition of the mail order houses and in a good many cases are meeting with considerable success.

The mail order house makes a regular practice of running leaders which are quoted at exceedingly low prices. It is on these leaders that the buying public quite frequently make their comparisons, even though the low-priced article is not the one which they wish to purchase.

Outside of the leaders the mail order houses as a rule have no better values to offer than the retailer—in fact the latter can very often supply a superior article at the same price or lower than the mail order house.

Why then, do the mail order houses meet with such great success? One of the principal reasons is that the mail order house always puts up a definite proposition—always gives a description of an article, usually accompanied by an illustration, and what is probably most important, always quotes a price.

The recipient of a mail order catalogue can always tell at a glance, exactly what price is asked for an article. A great deal of the success of mail order houses is undoubtedly due to the fact that the price is always quoted and there is one price to all. The mere fact that the mail order houses boldly quote their prices in large plain figures creates such a feeling of confidence in the minds of prospective buyers, that they feel the prices quoted in the catalogue must be right. They, therefore, send along their cash, money orders and cheques, amounting to many millions of dollars every year, and calmly wait from a week to three weeks for the goods.

The mail order houses are going ahead

(Continued on page 50.)

Did the Mail Order House Ever Do This?

DID you ever hear of a Mail Order House setting up a stove in a customer's home?

DO YOU know that it is often a matter of weeks before the mail order house makes delivery?

DO YOU know that the mail order stove often arrives in a broken condition, thus necessitating much red tape with railway officials and a great loss of time, often when the stove is most needed?

DO YOU have a look at a mail order stove before you buy it?

IF THE mail order stove proves defective, who do you have to appeal to? —A mail order house many hundreds of miles away.

IF THE mail order stove becomes rusted or badly marked in transit, who shines it?

DO YOU see a mail order stove before you send your money?

WHO UNCRATES and unpacks the mail order stove, puts the parts together, fits the joints and tests the stove to see if it is in perfect working condition?

WHAT DO you do when you want repairs for a mail order stove?

CAN A mail order house render on-the-spot service?

WHO FITS the pipes for the mail order stove?

DOES THE mail order house haul the stove from the station, sign for the stove in good condition, unpack it, mount it, and see that it is free from defects before it is delivered to you?

DOES THE mail order house help to build up your community?

DOES THE mail order house contribute to the support of local schools, churches and public institutions?

DOES THE mail order house employ any of your fellow townsmen and thus enable them to support their families?

DOES THE mail order house buy anything from the other merchants of the town?

IF YOU want to buy a stove, ask yourself the above questions and then come down to our store and let us talk it over with you.

The above panel, which originated in Hardware and Metal's office, has during the past year been used in dozens of advertisements, catalogues, etc., issued by retail hardwaremen. It was also gotten out in circular form by a stove manufacturer, and widely circulated in the Dominion.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, APRIL 1, 1916 No. 14

FINED FOR MISREPRESENTATION

THE annual report of the inspector under the gold and silver marking act, shows that during 1915, fifteen offenders were brought into court, all of whom were found guilty and fined. Classified there were 2 department stores, 7 retail jewelers, 2 manufacturers' agents, 2 auctioneers, 1 druggist, 1 traveling optician.

The punishment meted out to the auctioneers was a fine of $400. It is hoped that this will deter many from coming into Canada with large quantities of inferior jewelry, silverware, watches, etc., and renting a store previous to Christmas, doing a big business by misrepresenting goods, and then getting out immediately after the Christmas trade is over.

The manufacturers' agents who were convicted, were endeavoring to sell goods in Canada, made in the United States, and bearing the reputable marks of Sheffield.

The seven retail jewelers were all prosecuted and convicted for offering for sale wedding rings made by themselves and marked to be from two to three karats finer gold than they actually were. A very significant statement in the inspector's report is the following:—

"The departmental stores are prone to offend through their advertisements in the daily press by exaggerating greatly the merits of the articles advertised, and in many cases misrepresenting them. It is only in such cases where there is deliberate misrepresentation of quality that the Act is enforced."

That some department stores in their newspaper ads. greatly exaggerate the merits of the articles advertised is a statement that cannot be denied. Gross misrepresentation is carried on to a remarkable extent and HARDWARE AND METAL has on many occasions directed attention to the unfairness of the practice. The enforcement of the "Gold and Silver Marking Act" has been greatly facilitated by the amendments to sections 13, 14 and 15 that were assented to April 15, 1915. Of the fifteen offenders brought into court, fourteen were tried summarily, as the Act now provides.

TOY INDUSTRY A PROMISING ONE

ONE of the results of the conference and exhibition of toys by Canadian manufacturers referred to elsewhere in this issue will be to demonstrate the excellent promise which the industry has. Great interest has been taken by large numbers of people in the display which has been organized under the Department of Trade and Commerce and which is being held in Toronto. Canadians are confident that the manufacture of many lines of toys can be carried on in Canada just as well as in Germany. From the quality and variety of toys exhibited, there can be no doubt about this. In almost every case where Canadians have turned their attention to the manufacture of toys they have been able to turn out an article equally as good and in many cases superior to the foreign-made product. There is some substance about the Canadian-made toys. German goods seem like flimsy, shoddy articles in comparison.

Excellent progress has been made in the toy-making art in the short period of time that it has been given attention. In the making of dolls the foreign manufacturer has had many years of experience. After only six months on the work, Canadian manufacturers are turning out goods that will bring delight to the hearts of the doll users.

It is characteristic of the Canadian-made goods that they appear durable. It is stated the prices on most lines will be equally as low as those formerly charged for German toys. The exhibition has been a revelation to many. Credit is due the Department of Trade and Commerce for helping to focus attention on an infant industry by the organization of such an exhibition. Canadian manufacturers should not be content until they are able completely to supply the local market. If the quality of their goods is maintained, they should in time be able to reach into the export market.

MONTREAL'S CLEAN-UP CAMPAIGN

MONTREAL is going about the clean-up and paint-up campaign in a proper spirit. The city has set aside the week between May 14 and 20 as the time for civic housecleaning. Prizes to the value of eighteen hundred dollars are to be given for the best kept yards, lawns and gardens. It will be the aim of the Civic Improvement League to get the school children as well as the grown-ups interested in the movement.

It is an appropriate time for every city and town throughout Canada to get this movement under way. Hardwaremen should use their influence in their own bailiwick to start the ball rolling. They stand to benefit greatly by all paint-up and clean-up movements. It will, in addition, make your home town a pleasanter place in which to live. This is a movement which bids fair to grow with ever-increasing rapidity in Canada. Could we have any better national ideal than that Canada should be known as a country with clean, bright towns and cities?

AN ANNUAL TOY FAIR

ONE of the results of the toy conference held in Toronto this week was the decision to hold an annual toy fair. A combined committee of manufacturers and buyers has been organized for the purpose of carrying out this project. Ambitious projects are in mind. It is intended that the buyers from all over Canada shall attend this fair annually. In time it is hoped the buyers even from the United States and Europe will find it to their interest to attend.

There is no doubt but that the toy manufacturers of Canada can hope to cater to this wider field in the manufacture of these articles. One of the notable features of the exhibition was the practical and substantial nature of the Canadian-made toys. They had every appearance of being all wool and a yard wide, to use a stock phrase.

It is stated that the manufacturers of Canada will be able in many cases to meet the prices of goods formerly made by Germany. With the double attraction of well-made articles and reasonable prices the Canadian manufacturers can with good reason look forward to an ever-extending market.

A TARIFF TO PROTECT TOY INDUSTRY

AT the toy conference held in Toronto this week, Sir George E. Foster, Minister of Trade and Commerce, assured the toy makers of Canada that they could feel confident that all reasonable protection would be granted by the Government to this new industry. The makers have interpreted this as meaning that a tariff sufficiently high will be imposed on foreign-made goods to keep them out of the Canadian market. This assurance is timely and will give the manufacturers confidence to press forward in the development of the industry.

While this assurance has been given toy manufacturers should see to it that the tariff wall is not made a barrier to hinder the development of the industry or to secure higher prices than will represent a fair profit to the manufacturers. Once this industry is properly under way in Canada there is a field sufficiently large in the present and future to warrant the manufacturers having a conscience in the matter of prices and in giving the best article possible for the money.

CATALOGING THE COUNTRY

UNDER the heading "After the Business" a Western Ontario weekly paper contained the following item recently:

> There was a dray-load of —— and ——— catalogues, 11 bags, distributed at the Post Office here this week and taking advantage of the local parcel post rate, each catalogue took 6c postage. The big mail order houses by quoting descriptions and prices of all goods, and by liberal advertising, make strenuous efforts to extend their business and are not afraid to spend liberally to do so. More extensive, and intensive instead of general, advertising by local merchants, would do much to combat this opposition, for in many instances home merchants sell the same goods just as cheap or cheaper than the mail order firms, and if they were priced and described locally, the public would ever be more ready to patronize home trade exclusively.

This is but a sample of the story which practically every weekly paper throughout the country could tell if the facts were known. These catalogues are sown broad-cast by the big mail order houses and are taking the cream of the trade from many districts—that is the spare cash in hands of the consumer—and leaving the skim-milk for the home-town store. This is something that shouldn't be and the merchant is probably just as much to blame as the person who sends away for his goods. What is required on the part of every country and small-town dealer is an aggressive campaign that will ensure the business staying where it belongs. Just as soon as the mail order house finds a non-responsive public, just so soon will it discontinue spending good money on catalogues.

The secret of the success of the catalogue—it is really no secret—is this method of minutely describing and pricing the goods it advertises, combined with a number of "leaders" at which the public bite. Let every merchant study these catalogues himself and he will find ways and means to neutralize their influence.

Why Saskatchewan Opposes M.O. Tax

Would Not Remove the Difficulty, the R.M.A. Executive Claims — Catalogue Houses Would Then be on Same Footing as Retailers and Would Take Advantage of This Fact in Their Advertising, Declares Secretary

By F. E. Raymond, Secretary Saskatchewan Branch, R. M. A.

RETAIL merchants for years have been agitating and advocating that mail order houses be taxed, either on the business done or a small tax placed on each catalogue, with the object of having them help to support the community from whence they draw a considerable portion of their business.

The Dominion Board of this Association at Toronto have on one or two occasions been asked to institute legislation with this object in view, but on considering the question from all sides they have always felt that such taxation would not meet the case.

Recently, however, the Manitoba Board of the Retail Merchants' Association announced their intention of calling upon the Manitoba Provincial Government to cause legislation to be enacted re this, and in consideration of the many requests received at the office of the Saskatchewan Association our provincial executive held a meeting at Regina to discuss whether Saskatchewan should apply for the same legislation.

Every retail merchant is familiar with arguments as to why this should be done, but very few of them have heard the opposite side of the case, or considered whether the proposed taxation would provide a remedy.

The Saskatchewan provincial officers have given this question very serious consideration, and have the views of authorities on the subject, not only in this country, but in the United States as well, and as a consequence came to the conclusion that taxation would not meet the case.

This decision being published in the newspapers, caused much adverse criticism to be directed against our provincial executive. Some merchants apparently are laboring under the impression that the discussion held was final and settled the question. That, however, was not the impression that was intended to be conveyed. The discussion was quite an informal one, and in any case such a weighty matter would have to be dealt with at the annual convention, it depending entirely upon the resolution passed there whether such taxation be asked for in Saskatchewan.

While admitting that it is only right and fair that a mail order house help to support the community wherein it does a large portion of its business, at the same time, while we are seeking a remedy, we might as well get the right one, and in our opinion taxation would not apply.

F. E. RAYMOND
Secretary of the Saskatchewan Branch R.M.A., who gives views of Executive on taxing mail order houses

Local Merchant Must Exist

The local retailer is a necessity to any community. He pays his taxes, and contributes to the various causes of the neighborhood, either in material subscription or in personal interest. His stake in any district is identical with that of the producer, or any other mail order buyer, and he is quite as susceptible to the conditions of his particular district as any one else; and the values he gives do not vary a great deal from those of the large mail order firms when incidental expenses and delays are taken into consideration, so that the catalogue buyer is really no further ahead in actual saving, to say nothing of the direct loss to the community through his money being sent to the distant points.

One of the principal features a mail order house has to contend with is overcoming the natural prejudice of any person to buying goods without first seeing them, and to forwarding his money on trust. The only way these prejudices are overcome is by extensive advertising and offering catchy leaders; but even then there are hundreds of persons who have a conscientious objection to sending their money away from home for goods that can be obtained from the local retailer, on the grounds that the retailer as a convenience, and as a market for produce, and as one who extends accommodation in time of need, is entitled to a consumer's cash, as well as his credit business.

What Catalogue Houses Would Do

If a mail order house were taxed a nominal sum it would place them well on the way towards overcoming this prejudice, as they could attractively advertise that they were paying taxes for the privilege of doing business with the person reading the catalogue. In this respect alone the increased advertising power would far more than offset the comparatively small amount paid in taxes.

The taxes in any case would be added to the cost of doing business, so that it would make no appreciable difference in the price of the catalogue house goods, and those of the local merchant. To make a noticeable difference a larger tax would have to be imposed, and in our opinion this could not be done as it would be class legislation.

Another big point to contend with is the opposition of the farmers. The farmer through his association is now a power to be reckoned with, and he is bitterly opposed to the taxing of the mail order houses. These two points alone are sufficient to show that the proposed taxation would not provide the desired remedy, as a country merchant depends wholly on his farm trade for support. If he antagonizes his trade it is only driving it into the enemy's camp.

It is to be regretted that a number of merchants who adversely criticized our executive should do so until they had given the subject thorough consideration and had looked at it from all sides. The association is not passing up anything that would enable them to better meet the mail order competition.

Various plans will be discussed at the forthcoming convention, any one of which we are convinced will provide a much better remedy than would taxation, even if this could be enacted.

Far better would it be if country merchants would to a certain extent adopt the methods of the catalogue houses and cater better to their customers. For one thing, advertise more, bring their business as far as possible down to a strictly cash basis, and if they do give credit

(Continued on page 46.)

EVENTS IN THE TRADE

Obituary

Montreal, Que.—The death occurred here of Arthur Conmire, dealer in hardware and stoves.

Ontario Incorporations

Hodgson Bros. Chemical Co., Ltd., capitalized at $200,000, head office, Lindsay, Ont., to impart, manufacture, distil, methylate and deal in chemicals, spirits, etc.

Many Employees Enlist

The Taylor-Forbes Company, of Guelph, hardware manufacturers, has given no less than 109 of its employees to the forces of Canada. The number comprises men from the office staff to laborers around the factory. Major J. S. Taylor is among the number.

Business Changes

Melita, Man.—Scott & Gibson have been succeeded by N. W. Sterling.

Francis Sask.—J. Diebolt, hardware has been succeeded by F. W. James.

Goodwater, Sask.—Peters Bros., hardware, have been succeeded by Stirton & McIntyre.

Ravenserage, Sask.—East End Hardware Co., has been succeeded by Dyneson & Kaulk.

Prelate, Sask.—Langford & Bolster, hardware, have dissolved partnership, R. A. Langford continuing.

St. John, N.B. Notes

It is expected that Major Morris Fisher, manager of the Enterprise Foundry, Sackville, N.B., and son of W. S. Fisher, of Emerson & Fisher, wholesale and retail hardware, St. John, will be given command of the 58th Howitzer Battery, to be recruited in Fredericton.

A solid window of saws is the big feature in the window display of T. McAvity & Sons, Ltd., wholesale and retail hardware dealers, St. John, N.B., this week. A great variety of saws of every style and for every purpose is shown, the result being particularly striking in showing the wide range of styles for various uses.

Brandram, Henderson, Limited, of St. John and Halifax, paint manufacturers, have announced that each of their employes who enlisted will be paid at least one third of his wages and more if necessary to provide for a family, while he is serving in the army. The soldier's position will be kept open for him pending his return and if possible a better position will be provided when he comes back.

The use of girls and young women in replacing men who are enlisting is likely to receive a strong impetus in St. John through the efforts of the Young Women's Patriotic Association. The members, most of them society girls, have agreed to do anything that offers for the advancement of recruiting and are making a canvas of the retail stores offering to take the places of men who enlist for overseas service. They have

J. THURSTON SMITH

secretary-treasurer of Lewis Brothers. Ltd., Montreal, who is a member of the Board of Governors of the Canadian Credit Men's Trust Association of Quebec, and president of the General Accountants' Association of Montreal. A report of the Credit Men's meeting at Montreal appeared in last week's issue of Hardware and Metal.

met with considerable encouragement although so far the movement has hardly started.

W. H. Allen, president of the New Brunswick Guides Association, after a visit to New York, reports prospects of a big influx of tourists and sportsmen to New Brunswick this year. Owing to war conditions the number was much smaller than usual last year, but the sportsmen are recovering confidence and it is believed that the number of visitors will be at least up to the average this year. This is good news for the hardware dealers as the business of supplying the needs of the sportsmen is one of their most profitable lines.

The death of Major Warren Herbert Belyea, second in command of the 26th New Brunswick battalion, killed in action at the front on March 20, removes one of the most prominent of the younger hardware men of the province. Before entering upon active service Major Belyea was manager of the Miramichi Farm Implement Company, Newcastle, N.B., carrying on a general hardware business and specializing in farm machinery. Major Belyea left St. John in command of "C" company of the 26th battalion and won promotion through his efficiency. He was wounded in February and had returned to the trenches from the hospital only ten days before his death occurred. He is survived by his wife and five children.

Senator W. H. Thorne, head of W. H. Thorne & Co., Ltd., St. John, wholesale and retail hardware dealers, who was one of the party of directors of the Royal Bank of Canada who recently toured the West Indies Islands, had returned to St. John, filled with enthusiasm over the prospects of increased trade with the West Indies. He quotes the record prices of sugar and the increased production of coffee, cocoa and other tropical products as reasons for the unprecedented prosperity of the West Indies. He found the merchants well disposed towards Canadian manufactures and products and says that, with proper propagation, the export of Canadian goods to the islands should increase tremendously

Industrial

Walkerville, Ont. — The Canadian Brush Machinery Co. will establish a plant here for making the Liebig solid back brush machines, now being manufactured at Detroit, Mich. The company has recently been granted a Dominion charter.

Winnipeg, Man. — The Dominion Bridge Co. has been awarded the contract for the steel work for the T. Eaton Co. new building. The cost of the steel alone is estimated at $200,000. The building will be 200 ft. long by 123 deep and eight storeys high. The Cater-Halls-Aldinger Co. are the general contractors for the first unit.

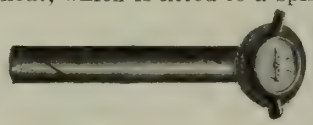
NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

GASOLINE GAUGE FOR FORD CARS

The Badger Craft Shops, Sheboygan, Wis., offer to the Canadian trade the "Challenge" gasoline gauge for Ford cars, which the makers claim will register the contents of the gasoline tank in Imperial gallons at all times and under all conditions.

The "Challenge" filler cap gauge is constructed of steel, and contains a brass float, which is fitted to a spiral upright that turns the indicator on the dial as the gasoline is raised or lowered in the tank. The head, containing the etched brass dial and indicator, is threaded to fit any Ford tank. The head of the gauge is equipped with two ears, which permit a good grip to be taken on it and makes it very easy to remove.

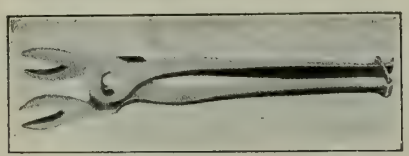


Challenge Gasoline Gauge for Ford Cars.

The "Challenge" filler cap gauge is complete and ready to screw into the tank.

UNIVERSAL VALVE LIFTER

A new auto specialty called the Barco "Universal" valve lifter, is now offered to the trade by the Barco Brass & Joint Company, 212 West Illinois street, Chicago, Ill. The makers claim that the tool is made on a new principle and its construction is adaptable to all makes of Poppet valve engines.



Barco Universal Valve Lifter

The company claims that the lifter is light and serviceable, and that it requires no holding when the pin is being removed. It is made of high grade malleable iron, finely finished. The lifter is automatic in adjustment, and it is said requires no time or delay in changing to any size for any engine valve.

EDWARDS 6—LEVER PADLOCK

The O. M. Edwards Co., Inc., Syracuse, N. Y., is placing on the market a new six-lever padlock No. 2444. The lock is made with six levers, twelve changes and double crooked bit key which the makers claim, has many advantages over the old style of straight bit. The lock is made up in various finishes such as brass plated, antique, copper, Japan, and red, blue and green baked enamel. The locks are put up on card assortments in the various finishes. They are also put up one half dozen in a box, 50 dozen in a case.

Edwards 6-Lever Padlock

FOREST CITY WASHER

Beatty Bros. Ltd., Fergus, Ont., have placed new washer on the market, called the B. T. Forest City power washer and wringer. The machine is equipped with an electric motor, or for use with a gasoline engine. The machine is regularly fitted with 1-6 house-power, 25 cycle 110 volts motor, 10 ft. black reinforced cord and plug to go in motor, also connection for attaching to electric light fixtures. A motor can be supplied to suit direct current if required. The regular motor runs, it is claimed, 1400 revolutions per minute and weighs 36 pounds. The washer is sent complete with belt for connecting motor and drive wheel on washer. The makers claim the washer will cost in power only about ½c per hour. One handle, shown in cut beside wringer, controls every operation. A simple turn will stop or start the washer, make it wash and wring separately, make the wringer run in one direction or reverse. All gears, as well as the wringer cogs, are enclosed.

The clothes are washed by means of a reversing dolly. The dolly is rigid on the post, so that the danger of the clothes wrapping around the dolly stem and tearing is eliminated. The post adjusts itself to the amount of clothes in the tub by passing up and down through the lid. The dirt is taken out by agitation rather than by friction, consequently this washer in unusually easy on them

Forest City Washer

A galvanized drain board is provided with every washer which attaches to the wringer so that every drop of water is returned to the tub.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Despite the steadying influence noticeable in the hardware situation, there is another heavy budget of price changes this week, with predictions of further advances in the near future. Some of the lines advanced in price this week are tinned iron, stove and tire bolts, enameled, japanned, tin, galvanized and copper wares, spades and shovels, hemp and jute rope, cap and set screws, cotton twine, carpet felt, iron rivets and burrs, flat and round head bright and brass wood screws, kitchen grindstones, crow bars, iron washers, rules and levels, boiler plates, machine screws, coil chain, cutlery, pipe fittings, picks and mattocks, milk cans and trimmings, stove rods, range boilers, some lines of files, shot, corrugated sheets and other lines. It will be noted that many of this week's advances were predicted in last week's issue of HARDWARE AND METAL. It is reported that further changes in some lines of ready-mixed paints may be expected almost immediately. It is impossible to give here a complete summary of the important features of this week's market reports. Retailers should read closely all the reports which follow.

MONTREAL

MONTREAL, March 31.—There appears to be evidence this week of a steadying influence in the hardware situation. The number of changes in both light and heavy goods would be many under normal conditions but there is a lull compared with the price activities of the past few weeks. It cannot be said that the top of the movement has been reached—in fact the outlook is that there will be early advances on tin plate, plates and certain sheets, while it is doubtful if the influences have yet reached the outer circles of the manufacturing trades—but there appears to be a greater appreciation of the fact that prices are abnormal, that they are created by a war demand and not domestic consumption and that eventually there must be a reaction. The big mills are still advancing prices for immediate delivery and will probably continue to do so while the pressure lasts but there is not the same interest shown in futures and there are indications that the way is being prepared for the reaction when it comes, but whether that will be in weeks or months is another matter. Under these circumstances, and considering that the conditions in Canada and the high prices are likely to interfere with consumption, the retailer may well be careful in judging his buying in relation to the probable needs of his trade.

Business has been very brisk. Wholesalers report that the output of general staples to the country districts continues and that the improvement over a year ago is very marked. At the same time preparations are being made for the spring deliveries which commence with the 1st of April and will be particularly heavy. In the city there is practically no improvement despite the arrival of more seasonable weather and one begins to wonder if there will be any marked betterment in conditions while the war lasts.

In the metals tin and lead have maintained strong positions without general change in quotations and copper is somewhat easier. Altogether the situation is comparatively steady after the activities of the past few weeks but there is no promise that this steadiness will last.

Some of the lines advanced this week are: Tinned iron, stove bolts, tire bolts, screws, hammers, iron rivets and burrs, hemp and jute rope, oakum, carpet felt, cotton twine, shovels and spades, cap and set screws, some cutlery items, clothes line wire, crow bars, kitchen grindstones, wrought iron washers, safety hasps, joiners' axes, enameled, japanned, tin, galvanized and copper wares and practically all of the scrap metals.

Tin Very Strong.—Although the general quotations for tin are unchanged this week in this market, the situation is very strong and the present indications are for an early advance on the high price now prevailing. As has been previously pointed out, the London influence is direct in this market and has offset further weakness in New York, where quotations are an additional cent off, following the decline of 4 cents recorded in last report. New York reports moderate inquiry and substantial arrivals with fair prospect for future supplies there. Montreal quotation: 52½-53c—very strong.

Copper Slightly Weaker. — The local copper situation is decided as being somewhat weaker on quotations as recorded in last report; some decline may be anticipated in view of the high position which this metal has held for some weeks at the top of a sensational upward movement over a period of some weeks. New York reports a dull market with quotations fractionally lower than at last writing. All round there is an easier tendency, with second hands, dealers and small producers showing a more general disposition to meet the market. Montreal quotation: 32-32½c — Tendency easier.

Lead Is Very Strong.—The lead market continues in a very strong position and, although there is no general change in local quotations, the tendency is to higher levels. This is indicated in the advance of spot of 12½ cents in New York to a position of .87½ cents above the Trust quotation of 7.00 cents. However, the Trust has recently issued an announcement to the effect that its policy will be to endeavor to keep prices down to a level where ordinary domestic consumption will not be strangled, rather than to push up quotations on the foreign war demand. For this reason it is considered that efforts to raise the outside market to much higher levels without the support of the Trust will be made with doubtful results. Montreal quotation: 10¾-11c—very strong.

Spelter Slightly Easier. — There is practically no change in the spelter situation, although the tendency is slightly easier and there is a fractional decline in prices. England has been an important influence in the market and there has recently been an announcement made to the effect that the government will give assistance to producers; however, thus far this has not had much effect on the London market. Montreal quotation: 22½-23c—somewhat easier.

Solder Very Strong. — As reported last week, the high position of tin and other metals entering into its manufacture has had the effect of creating a very strong market for solder with a wide range of prices. Prices are nominal for the time being but the following give a fair idea of the situation: Commercial half-and-half 30½-31c and Strictly half-and-half 32½- 33c.

Other Metals.— Aluminum, antimony, sheet zinc, etc., are quoted the same as at last report. As regards the antimony market there is an interesting report from New York to the effect that there has been an order placed there for between 400 and 500 tons for Canadian account, shipments to be made through-

out the year. This is believed to be for munitions manufacture. Montreal quotations: antimony 48c; aluminum 68c and sheet zinc 31c for casks and 31½c for part casks.

Iron and Steel Situation.—While it cannot be said that there is any reduction of the tension in the market for manufactured steel and iron, and while further advances are to be looked for on tin plate, sheets, boiler tubes, etc.—in addition to a few changes this week—the abnormally high position of the market, and the fact that this has been brought about by a war demand, is beginning to call attention to the fact that one advance does not necessarily indicate another and that with each succeeding rise the situation is becoming more and more strained. The greater the rise the more drastic is likely to be the process of adjustment and, although this may be postponed indefinitely, and although there may be higher prices in the meantime, that adjustment is certain to come sooner or later. Dealers should, therefore, consider their needs and the general situation carefully before dealing in futures or laying in heavy stocks in relation to a demand which is almost certain to be restricted by prevailing conditions and the high prices. Reports from the States indicates that, while prices for prompt shipment are still on the advance, futures are now being neglected; signs of a readjustment are reported but whether it will commence in weeks or months—or possibly years—is another mater.

Tinned Iron Up.—The scarcity of tin plate and tinned iron is becoming one of the most acute features of the situation. The mills show practically no interest in business and appear to be booked to the end of the year. A further advance on tinned iron of 75 cents has been made as follows:

72 xx 30 up to 24 gauge, case lots $13.25
72 x 30, 26 gauge, case lots $13.75
Less than case lots 25c extra.

Plates Are Scarce.—The difficulty in getting supplies is creating a serious situation with regard to boiler plates, particularly the 3-16 inch, and higher prices are being predicted if there is no improvement.

Boiler Tubes Strong. — Boiler tubes are in a very strong position following the recent advances on other tubular goods. Higher prices are to be expected.

Situation in Sheets.—Prices for the heavier gauges of black sheets are very strong on the advances recorded a week ago, and there are indications that there may be still higher quotations as stocks are being rapidly exhausted and deliveries are difficult to secure.

Lead Pipe.—Despite the advances already in effect on lead pipe, to a level of $13.50 for lead pipe and $14.50 for lead waste pipe, it is doubtful if the cost of raw material is yet being covered by a reasonable margin. If lead holds its present position or advances still higher prices may be looked for.

In Hardware Lines.—While there are still a large number of changes in hardware lines to announce this week, as compared with normal times, there is a noticeable lull after the general readjustments in evidence for some weeks past. Whether this is an indication that the top is being reached, or whether it is just a period of hesitation in the general advance, is difficult to say, but there is beginning to be a more general feeling that, despite the war demand, advances cannot be continued indefinitely, especially as they are likely to have an important effect upon the public demand.

Screws Again Advance.— A late announcement gives another increase on screws. The discounts now are:

Wood, F. H., bright 80
Wood, R. H., bright 75
Wood, F. H., brass 47½
Wood, R. H., brass 45

Stove and Tire Bolts.—The most recent of several advances on stove and tire bolts has reduced the discount on the former from 72½ per cent. to 65 per cent. and on the latter from 60 to 55 per cent.

NEW DISCOUNTS ON WOOD SCREWS.

The new discounts on wood screws referred to elsewhere in this issue are as follows:

Flat Head, Bright	80%
Oval Head, Bright	75%
Round Head, Bright	75%
Flat Head, Brass	47½%
Oval Head, Brass	45%
Round Head, Brass	45%
Flat Head, Bronze	40%
Oval Head, Bronze	37½%
Round Head, Bronze	37½%

F.o.b. Hamilton, Toronto, Montreal, London, with freight equalized thereon. Terms 2%, 30 days. Orders will only be accepted with specifications, and for prompt shipment, and these discounts are subject to change without notice.

Hammers Going Up. — Further advances are being made on sledge, blacksmith and other heavy hammers. This increase in about 2 cents per pound all round.

Rivets and Burrs.—Another advance on blackened and thinned rivets and burrs has cut the discount from 55 to 42½ per cent. for both the rivets and burrs.

Advance on Rope.—Higher prices on certain hemps and jutes are announced by the manufacturers of ropes, the Manilas, African hemp, sisal and lathyarn not being affected. New Quotations are:

Hemp, deep sea line basis 30
Hemp, tarred ratline basis 26
Hemp, tarred belt rope basis 28
Marline and houseline 28
Jute rope basis 15
Italian rope basis 30

Oakum is Higher. — An advance of half a cent on U. S. Navy oakum has gone into effect, the new quotations being 10 cents.

Carpet Felt Up Again.—A further advance on carpet felt has gone into effect. The present quotation is $3.75 as compared with $3.50 at last report.

Cotton Twine Costs More.—Although there is no change this week for cotton rope, there has been an advance on common cotton twine form 26 to 27 cents.

New Discounts for Shovels.—As has been intimated for several weeks past, there has been a withdrawal of prices on shovels and spades followed by an announcement of a reduction of discounts all round, which has the effect of raising prices about ten per cent. New discounts follow:

	1st	2nd	4th
Shovels	50	45	35 p.c.
Sockets sc'ps. ..	40 & 5		35 & 5
Rivet scoops, 35-7½			
Drain tools	50		
Holow backs and sand	50		35

Riveted back scoops, 1st, 2nd and 3rd grades, 35-7½ per cent

Above discounts on Black Goods only. Full polished Goods, 50c per doz., net extra. Half polished Goods, 25c per doz. net extra.

Cap and Set Screws.—The discounts on cap and set screws announced last week were only in effect for a short time when there was another advance. The most recent discounts are: set screws 55 and 5 per cent. off and cap screws 45 and 10 per cent. off.

Cutlery.—On the line of cutlery generally known as No 900 there have been further advances. New prices are: Table spoons $4.10; dessert spoons $3.95 and tea spoons $2.05; dessert forks $4.50 and table forks $4.70—quotations being by the gross.

Clothes Line Wire.—An increase has been made in the quotations here for clothes line wire. No. 19 is now quoted at $3.75 and No. 18 at $4.30.

Crow Bars.—The prices on crow bars are again advancing. The new price is given at $4.00 as compared with $3.25 to $3.50 formerly.

Kitchen Grindstones.—Small kitchen grindstones have been advanced in price. The 8 and 9 inches sizes are quoted at 85 cents each.

Wrought Iron Washers. — Higher prices for wrought iron washers have the effect of reducing the discount from 35 per cent. to 30 per cent. off list.

Safety Hasps.—New prices at a higher level have been announced for safety hasps number 915. Quotations now are: 3—65c; 4½—85c and 6—$1.20.

Joiners Axes.—Following the advance on axes reported a couple of weeks ago, there have been higher prices announced for joiners' axes. Handled are quoted: $10.00 per doz. and un-handled $8.50 per doz.

Important Advances on Wares.—Important and general advances on enameled, Japanned, tin galvanized and copper wares have been made. There have been forced upon the manufacturers by the remarkable increase in the cost of the various raw materials. Not all items are affected, but the following new discounts on the standard list, as reported by the McClary Company, indicate that the number is larger.

Light elbows 5 and 6 inch $1.25, 7 inch, $1.40. Copper ware 15 per cent. boiler and tea kettle bottoms list. Mowing machine oilers 33 1-3 per cent.

Old Materials. — There have been a number of further advances in the prices for old materials with the advances in the metals markets. New quotations are as follows:

Tea lead, pack, 6¼c lb.
Tea lead, chest, 6¼c lb.
Lead (heavy) pipe, etc., 7¼c.
Brass, heavy, 15½c lb.
Brass, light, 11¼c lb.
Zinc, heavy, 15¾c lb.
Copper, heavy, 21c lb.
Old cast iron, $14.75 per ton.
Wrought iron, No. 1, $18.75 ton.
Wrought iron, No. 2, $10.50 ton.
Mach. compos., No. 1, 16½c lb.
Compos. turnings, No. 1, 14¾c lb.

Seasonable Lines.—There is reported to be a very good demand at the present time for such spring cleaning materials and goods as: flour polishers and polishes, mops, metal polishes, stove and household brushes, brooms, etc.

TORONTO

TORONTO, Ont., March 30.—The situation in the hardware market as regards the volume of business moving, continues satisfactory, and the mild weather has already had a stimulating effect on trade. There is no improvement, however, on the situation as regards raw materials, with the result that deliveries from manufacturers are getting more backward than ever and a scarcity of a number of lines of hardware is threatened. On account of the high price of raw materials, jobbers cannot replace stocks at old levels, with the result that prices of finished goods continue to advance. In some lines the situation is acute, as it is predicted that the goods will not be able to be obtained at any price, particularly if the demand keeps up, as it is expected to do. The opening of navigation on the lakes, which is expected very soon, will be welcomed in business circles. The delay to shipments of goods, owing to the congestion on the railways, is becoming a serious matter, and the opening of navigation will relieve the situation. It will also facilitate the movement of goods, particularly heavy shipments to the West.

Prices Continue Upward.—Prices continue in an upward direction, with no indication of a recession. The lines affected this week are principally iron and steel goods, and the steady increase in cost of semi-finished products is the chief cause of the advances. Boiler plates, shafting, cap and set screws, machine screws, wood screws, pipe fittings, spades and shovels, coil chain, clay picks and mattocks, stove rods, range boilers, files, shot, carpenters' rules and levels, etc., enamelware, copperware, tinware, galvanized ware, stamped ware, milk cans and trimmings, cotton twines, packings, stove rods, stove boards, corrugated roofing, etc.

Iron and Steel Situation.—The steel market is very firm and prices continue to advance. The mills have practically sold their entire output for the year, and are thus in a very strong position. Reports from the steel companies are very optimistic, and all indications point to continued activity for the rest of the year. There appears at the present time little possibility of any serious weakness developing in the market during the year, but if the market in the United States should decline materially, and some authorities believe that it possibly will do so, then the Canadian market might be affected. There is a feeling that prices are too high, and the market for this reason is top heavy. There is, however, no indication that the market has reached the top, but there are signs that prices will probably not go much higher.

A number of price changes have been made during the week, all in an upward direction. Boiler plates have again advanced, being 25c per 100 pounds higher than last week's quotations. Boiler plates, ¼ to ½ in., are now quoted $3.75; heads, $4; and tank plates, 3-16 in., $4.10 per 100 pounds. Cold-rolled shafting has advanced, and is now quoted at list plus 10 per cent. f.o.b. warehouse. Steel bars are firm at $3, and iron bars are unchanged at $2.75 per 100 pounds. Toronto warehouse prices on steel bars and shapes are higher, bars being quoted at $3 and shapes at $3.25 per 100 pounds. Prices of boiler tubes are very strong, and an advance is looked for in the near future.

Enamelled Ware—
Grey, 70 and 5%.
Imperial, Colonial or Pearl, 60%.
Canada, Diamond and Premier, white lining, 40 and 10%.
White, 70%.
Japanned Ware—
Japanned ware, 30%.
White, 25%.
Plain and japanned water pots, 25%.
Stamped and Tinners' Trimmings—
Plain, 70%.
Retinned, 66 2-3%.
General tinners' trimmings, 33 1-3%.
Railway and factory can trimmings, net list.
Factory milk cans, 25%.
Pieced ware, 25%.
Sheet iron ware, 30 and 10%.
Acme fry pan, 65%.
Spiders, 50 and 10%.
Stove shovels, 40%.
Steel Sinks—
Japanned, 35%.
Galvanized, 20 and 10%.
Galvanized Ware—
Pails and tubs, 10%.
Coal Hods—
Japanned, 25%.
Galvanized, list price.
Stove Boards—
Wood lined, 60%.
Paper lined, 60 and 10%.
Stove Pipe—
Patent pipe, 25%.
Elbows, 30%.
Galvanized elbows, 15%.

Above are new discounts on wares, stove pipe and boards, etc., off standard list

The high-speed steel situation is more or less unchanged. Reports from Sheffield, England, state that it is almost impossible to turn out sufficient high-speed steel for munition tools, and that export licenses, more especially to neutral countries, are being closely restricted. On account of this heavy demand, comparatively little high-speed tool steel is coming to Canada from England. There is also a big demand in the States for high-speed steel, which is tending to keep the prices up and the supplies scarce.

The steel market in the States is very strong, and prices still have an upward tendency. There appears, however, to be an opinion held in some quarters that prices can hardly go much higher, and that the top of the market has nearly been reached. The new demand is reported as being very insistent, and the pressure on mills for deliveries as strong as ever. Prices of billets are firm and unchanged, but wire rods have advanced to $57 per ton Pittsburgh.

Pig Iron.—The pig iron market is firm and the situation unchanged. There is some improvement in the demand for foundry grades of pig iron. Hamilton and Victoria brands are unchanged at $24 per ton.

Old Materials.—The market is steady, with prices at approximately the same level as last week. Copper and lead are strong and in good demand. Prices on copper are firm and unchanged, but lead has advanced ½c a pound. Heavy melting steel continues in good demand, but quotations are unchanged.

Metal Market.—The situation in the metal market is unchanged, and prices, with the exception of tin, are the same as last week. The lead situation is the most interesting feature, and the market is strong. The "Trust" price is still below outside quotations, but the reason for this is not very clear. The tin market in New York is easier, due to large arrivals of metal, while copper is dull and unchanged. Spelter is weaker, following a decline in London, but quotations are unchanged. The antimony situation is unchanged, and quotations are nominal. There is nothing of particular interest to note regarding aluminum, and the market is stationary. Prices of solder are unchanged, but firm. Stocks of all metals are low in Toronto, and consequently prices on the local market are very sensitive. Business is very good, having improved considerably during the past few weeks.

Copper Firm.—The market is firm and dull, with quotations nominal. The position of copper continues to be a strong one, as indications point to a heavy consumption for many months. The present dullness, however, may be accounted for by the fact that there is now enough copper for sale to take care of any demand that is likely to develop for the next two months at least. Local quotations are nominal and unchanged at 30½c per pound.

Tin Lower.—Although the market is easier in New York, due to large arrivals of tin recently, a recovery may be looked for in the near future. The London market is strong, due to increased demand and supplies of spot metal are getting lower. The consumption of tin has increased considerably, and will likely continue to do so for months to come. Tin has declined 1c, and quotations are nominal at 55c per pound.

Spelter Firm.—The market is quiet and steady, following the recent activity. The demand for spelter is light, consumers in the meantime are staying out of

the market awaiting developments. Local quotations are unchanged at 23c per pound.

Lead Strong.—The situation is unchanged; at the same time, unprecedented. It is difficult to determine the actual level of prices, as the "Trust's" price is nominal, and it is not selling at that figure, but will sell in April at the average of its own quotations for that month. The demand for lead is heavy, and the market has an upward tendency. Local quotations are unchanged at 10c per pound.

Antimony Firm.—The antimony situation remains unchanged. The scarcity of spot metal is acute, and the market very firm. Quotations are nominal at 48c per pound.

Aluminum Firm.—The market is quiet and quotations nominal at 68c per pound.

Solders Firm.—Prices are firm and an advance may be looked for, as both tin and lead are likely to go higher. Guaranteed is quoted at 31½c, and strictly at 29c per pound. Other quotations are given in the selected market quotations.

Galvanized Sheets.—The situation is unchanged, and the market continues strong, with an upward tendency. The uncertain fluctuation in spelter and continued high price of this metal, and also of black sheets, has rendered the situation very unattractive to the mills. Black sheets continue to advance in the primary market, and deliveries are getting further behind.

Boiler Plates Up Again.—The higher prices on boiler plates, which were announced last week, have been followed by another advance this week. The new quotations are 25c per 100 lbs. higher, and are as follows: Boiler plates, ¼ to ½ in., $3.75; heads, $4; and tank plates, 3-16 in., $4.10 per 100 pounds. The market is very strong, and a further advance will likely be made.

Cold Rolled Shafting Up.—The general advance in all steel products includes cold rolled shafting, the new discount being list plus 10 per cent., whereas net list was the previous quotation.

Another Advance in Wood Screws.—The lower discounts announced two weeks ago have been followed by another advance in bright and brass screws; bronze screws being unchanged. The steady increase in cost of raw materials is the reason for the many changes in the price of screws which have been made this year. The new discounts are as follows: Bright screws, F.H., 80 per cent.; bright R.H., 75 per cent.; and bright O.H., 75 per cent. Brass screws, F.H., 47½ per cent.; R.H. and O.H, 45 per cent.

Machine Screws Advance.—The advance predicted in these columns recently has materialized, the following new and lower discounts having been made: Flat head iron, 27½ per cent., and fillister head iron, 10 per cent. Flat and round-head brass and fillister head brass screws are all net list.

Spades and Shovels Advance.—Higher prices on spades and shovels were predicted in Hardware and Metal last week. The new discounts, which are as follows, represent an advance of about 10 per cent.: Shovels, 1st, 50 per cent.; 2nd, 45 per cent., and 4th, 35 per cent. Socket scoops, 1st, 40 and 5 per cent.; 4th 35 and 5 per cent. Rivet scoops, 35 and 7½ per cent.; drain tools, 50 per cent.; hollow backs, 1st, 50 per cent., and 4th, 35 per cent. Prices of snow shovels have been withdrawn. Prices on all lines of shovels, except snow shovels, are for immediate shipment only, and indications point to a further advance.

Coil Chain Higher.—Prices of coil chains, including electric welded and coil have advanced $1 per 100 pounds, bringing up quotations to the following figures: Proof coil, ¼ in., $8.85; 5-16 in., $7.50; ⅜ in., $6.75; 7-16 in., $6.55; ½ in., $6.35; 9-16 in., $6.35; ⅝ in., $6.20; ¼ in., $6.10; ⅞ in., $5.95, and 1 in., $5.80 per 100 pounds.

Electric Weld Coil Chain—B.B., 3-16 in., $11.45; ¼ in., $8.15; 5-16 in., $6.65; 7-16 in., $5.60, and ½ in., $5.60 per 100 pounds. Electric weld loading chain, ¼ in., is now $13.50 per 100 pounds.

Sharp Advance in Wares.—A general advance in all lines of ware has been predicted in Hardware and Metal on more than one occasion recently. Since the last advance in ware the cost of all raw materials has been steadily increasing, and all metals are now considerably higher than they were early in the year. The logical result is that manufacturers have been forced to adjust prices of their products to meet the new conditions. The extent of the advances varies considerably, but may be said to range from 10 per cent. upwards. The various lines affected and new discounts are given below.

Copper and Nickel Ware.—The new discount on copper boilers, kettles, tea and coffee pots is 15 per cent., as against 30 per cent. before. Copper boiler and tea kettle pitts were 10 per cent., but are now net list.

Japanned Ware.—The new discount on colored japanned ware is 30 per cent. and on coal hods 25 per cent. The former discounts were 35 per cent. and 30 per cent. respectively.

Enameled Ware.—White ware is quoted now at 70 per cent., the old discount being 70 and 10 per cent. The new discount on Canada, Premier and Diamond ware is 40 and 10 per cent., whereas 50 and 2½ per cent. was the former discount. Pearl, Imperial and Colonial ware is now 60 per cent., as against 60 and 10 per cent. formerly.

Galvanized Ware.—The new discount on Dufferin and English pattern pails and galvanized wash tubs is 10 per cent., being changed from 20 per cent., the former figure. Galvanized coal hods are net, being formerly 12½ per cent., and other lines are now 10 per cent., as against 20 per cent. formerly.

Pieced Tinware.—The old discount was 25 and 5 per cent.; the 5 per cent. has been removed, leaving a new price of 25 per cent. The discount on flaring sap buckets and pails and also coal hods has been lowered from 25 and 5 per cent. to 25 per cent.

Stamped Ware.—Plain stamped ware is now quoted at 70 per cent., and retinned ware at 66 2-3 per cent; the old discount on the latter was 70 per cent. Tinners' trimmings have been changed from 70 and 10 per cent. to 70 per cent.

Milk Cans Also.—Milk and creamery cans are affected in the same way as the various lines of ware given above. Milk cans and pails, also creamery cans, are now 25 per cent. Milk cans and pails were formerly 25 and 5 per cent., and creamery cans 35 per cent. Hand and delivery cans are 25 per cent., being formerly 25 and 5 per cent. Milk can trimmings, which were 10 per cent., are now net list.

Packings Advance.—Makers of packings have advanced their prices 1c per lb., owing to the increase in cost of jute and hemp, etc. Fine jute packing is now quoted at 11½c, and coarse sewer at 9½c per pound. Square braided hemp 25c: No. 1 Italian, 30c, and No. 2 Italian, 23c per pound in coil lots.

Cordage Higher.—Some lines of cordage have advanced 1c per lb. Hemp deep sea line, 30c; tarred ratline, 26c; tarred bolt rope, 28c; marline and houseline, 28c; yacht marline, 34c to 40c; white polished beaver halyards, 22c; jute rope, 15c, and Italian rope, 30c. The market is very firm, and the situation unchanged. Business is improving, but considerable delay is being caused to the shipment of goods owing to the congestion of freight on the railways. The opening of navigation, which is expected very soon, will greatly relieve the situation.

Binder Twine.—The new prices on binder twine have not been issued yet, the delay being caused by the conditions in the raw material market. Makers of

WALLPAPERS WILL ADVANCE

Manufacturers of wallpaper are making preparations to quote an advance in the lines which they will put on the market about July next. These goods will not advance in price to the consumer until next year's goods are marketed. Travellers for the manufacturers will quote advanced prices on certain lines when they start their rounds in July of this year. The manufacturers state this advanced price is necessitated through the increased cost of dyestuffs. Yellow, green and blue dyes have advanced in certain instances several hundred per cent. Barium chloride, which is used as a base for colors, is to-day quoted at 450 *per cent. more than last year. There has also been an advance in the price of crystals, such as clay, zinc, bark extract, logwood, caustic soda, shellac, bronzes, varnishes, twine, wrappers, coal. In addition, the price of paper has been bounding upward.*

binder twine are holding off as long as possible in the hope that outlook will become more settled.

Stove Rods Up.—A new price of 8c per pound has been made on stove rods. The former figure was 6½c per pound.

Corrugated Roofing, New Prices.—Prices of galvanized corrugated roofing have advanced about 10 per cent., and are as follows: 18g., $13.50; 20g., $11; 22g., $9.50; 24g., $8; 26g., $6; and 28g., $5.50 per square. On painted corrugated roofing the prices are as follows: No. 18g., $9; 20g., $7.25; 22g., $6.25; 24g., $5.25; 26g., $4.25; and 28g., $3.75 per square All the above prices are subject to a dealer's discount of 10 per cent.

Cotton Twine Up.—Prices of cotton wrapping twine have advanced 1c per lb., and are as follows: 5-ply and up, 27c; 4-ply, 26½c; and 3-ply, 24c per pound.

Waste.—Makers of wool packing waste and washed cotton wipers have withdrawn prices on these lines. Prices are on application only. This step has been taken on account of the great scarcity of wool yarns and cotton rags. The market is very strong, and an advance in white and colored wiping waste is expected in the near future owing to the scarcity and increase in cost of cotton threads.

Clay Picks Will Advance.—Manufacturers of clay picks, mattocks and crow bars have announced higher prices, which will mean an advance on jobbers' present prices of approximately 20 per cent.

New Prices on Shot.—A new price on standard shot of $14.50 per 100 pounds has been made. The former quotation was $13.40.

Files Advance.—Some lines of files have advanced, the new discounts being as follows: Black Diamond, 60 and 5 per cent.; Delta, 55 and 10 per cent., and Nicholson, 60 and 5 per cent.

Carpenters' Tools Again Advance.—Carpenters' tools, such as levels, rules, planes, etc., have taken a further advance of approximately 10 per cent.

Pipe Fittings.—A few changes have been made in the discounts on cast iron and malleable pipe fittings. The lines affected with the new discounts are as follows:—Bushings, 60 and 5 per cent.; flanged unions, 60 per cent.; malleable lipped unions, 60 per cent., and plugs, 60 per cent.

Range Boilers Higher.—A slight increase has been made in the prices of range boilers. Standard, 30-gallon, welded, is now $7.50; standard, 30-gallon, riveted, $7.75, and extra heavy, $11 each.

Valves.—Globe, angle and check valves now carry a discount of 35 per cent., as against 37½ per cent. before. Other lines are unchanged for the meantime.

Stove Boards Up.—Makers of stove boards have advanced their prices. The new discount on wood-lined is 60 per cent., and on paper-lined 60 and 10 per cent.

Wire Nails.—The market continues very strong, and higher prices are looked for, as wire rods continue in an upward direction, and are difficult to obtain. Wire nails are quoted at $3.40 per keg base, and cut nails at $3.20 per keg base.

Galvanized Wire.—The market continues very firm, and there is no relief in sight as regards the scarcity and high cost of raw material. Considerably higher prices on galvanized wire are looked for in the near future.

Lead Pipe.—The market is very strong in sympathy with the pig lead market. Indications seem to point to higher prices for pig lead, in which case lead pipe may take another turn upward. The present quotation on lead pipe is $13.50; waste pipe, $14.50 per 100 lbs. Traps and bends, 15 per cent. off.

"HARDWARE AGE" THINKS SPRING NUMBER BEST OF ALL CANADIAN PUBLICATIONS

The following letter from Roy F. Soule, editor of "The Hardware Age," the leading hardware journal of the United States, published in New York City, gives an appreciation of the Annual Spring Number of "Hardware and Metal" which is, to say the least, a sincere compliment:

MacLean Publishing Company, Ltd., Toronto, Canada.

Gentlemen,—The Annual Spring Number of Hardware and Metal came to my desk this morning, and I cannot let the day pass without offering you my most hearty congratulations on this splendid number. I have been reading Canadian business magazines for many years, and this issue of Hardware and Metal contains more real meat than any issue of any Canadian publication I have ever seen. It is indeed a pleasure to congratulate you and the Canadian hardware trade on this accomplishment.

Cordially yours,
ROY F. SOULE.

Ready Roofing.—The situation is becoming more acute, due to the great shortage of raw materials. Prices of ready roofing will certainly go higher, and, furthermore, a scarcity is very probable.

LONDON

LONDON, Ont., March 29.—Business here continues very fair, but the outlook is more favorable. The regular spring trade has hardly started yet, but the more seasonable weather will stimulate business. Prices continue to advance, and many changes have been made this week.

Wood Screws Advance.—An advance of approximately 10 per cent. has been made in bright and brass wood screws. The new discounts are given in a panel.

Bolts and Rivets Up.—The following new prices have been made: Stove bolts, 65 per cent.; tire bolts, 55 per cent.; iron rivets, 42½ per cent.; iron washers, 30 per cent.

Soldering Irons Up.—Soldering irons have advanced, the new price being 49c per lb. base.

Turpentine Advances. — Turpentine has advanced 1c per gallon, and is now quoted as follows: 1-barrel lots, 80c; 2 to 4 barrels, 79c; and 5-gallon lots, 87c per Imperial gallon.

Linseed Oil.—The linseed oil market is a shade easier, and new prices are now being quoted. Raw oil in 1 and 2-barrel lots, 98c; 3 to 5-barrel lots, 97c; and 6 to 9-barrel lots, 96c per gallon. Boiled oil, 1 to 2 barrels, $1.01; 3 to 5 barrels, $1; and 6 to 9-barrel lots, 99c per gallon.

White Lead Firm.—The market is very firm, and prices unchanged. Pure white lead is quoted here at $13.95 in ton lots, and $14.25 in less than ton lots.

Rope Firm. — The market is firm. Prices are unchanged, and are given in the current market quotations.

Packings Change. — Hemp packings have advanced, and are now quoted as follows:—Russian hemp, 23½c; Italian hemp, No. 1, 30½c, and No. 2, 23½c. Jute packing, 12c per pound basis.

Wire Nails.—The situation is unchanged. Wire nails are quoted at $3.40 per keg base, and cut nails at $3.20 per keg base.

Fence Wire and Staples.—Quotations on fence wire and staples are unchanged, and prices are given in the current market quotations.

Poultry netting discount is 30 per cent.

Spades and Shovels.—Discounts are as follows: 1sts, 50 and 10 per cent.; 2nds, 50 per cent., and 4ths, 40 per cent. The discount on harvest tools is 40 and 12½ per cent.

Glass.—The situation is unchanged. The discounts are: Single diamond, 30 per cent.; double diamond, 30 per cent. Cut lights net list.

Wrought Iron Pipe.—Market is very firm and prices unchanged.

WINNIPEG

WINNIPEG, March 30.—In looking over the results obtained during the month of March, all of the jobbers seem to be satisfied with the amount of business which they have handled. Orders have been coming in very freely, with the result that practically every wholesaler in the city has been taxed to the limit of his capacity.

It is a little hard to determine just what effect this may have on the business for April, as undoubtedly many retailers who usually place their orders in this month, have already bought. This is due, undoubtedly, to a great extent to the upward trend of prices, and retailers who have already placed their orders, will be able to offset mail order competition in a great number of cases where such competition shows lower prices today than those quoted by the jobbers.

It might be brought to the attention of the retailers that a great many of the mail order houses have inserted a clause

along with their prices on different wire and steel products stating that they do not guarantee prices quoted in the catalog. This being the case, it will be possible for retailers who booked their orders last fall, or early this year, to compete against this competition. There is no doubt that prices as quoted in many of the mail order catalogs influence quotations throughout the country by the retailer, but there is no particular reason why the retailer should not apply the same aggressive methods in handling his business which the mail order people do with theirs.

It is expected that sorting business for April will continue very freely, and all of the jobbers are looking forward to handling their fair share.

There are not a great number of price changes to note this week, but those below show that the tendency is still upward rather than the reverse.

At the time of going to press, another change on tinware and galvanized ware is reported, which will approximate about 5 per cent advance.

The different sizes of soft and chilled shot show an advance in price and same are noted herewith: Shot, Common 3 A to Dust, $14.15 per 100 lbs.; Chilled, $15.60 per 100 lbs.; Buck S S G to 4 A $14.90 per 100 lbs.; 28 Ball, $15.30 per 100 lbs.

Another advance in the price of coil chain and logging chain is reported, and the prices given below, represent the best Winnipeg quotations to-day:

Coil Chain per 100 lbs.:—1/8, $14.00; 3-15, $10.25; 1/4, $7.50; 5-16, $6.60; 3/8, $5.75; 7-16, $5.50; 1/2, $5.25; 9-16, $5.25; 5/8, $5.15; 3/4, $5.00; 7/8, $5.00.

Log chains per 100 lbs.; 5-16, $7.00; 3/8, $6.00; 7-16, $5.85; 1/2, $5.75.

Further advances in the prices applying to wrought iron pipe, both black and galvanized, have gone into effect, and we give herewith a memo of to-day's ruling prices.

Wrought Iron Pipe Black per 100 ft.: 3/8, $3.50; 1/2, $4.45; 3/4, $5.35; 1, $7.95; 1 1/4, $10.30; 1 1/2, $12.30; 2,$16.50; Galvanized per 100 ft.:—3/8, $5.90; 1/2, $6.75; 3/4, $8.45; 1, $12.50; 1 1/4, $16.20; 1 1/2, $19.40; 2, $26.00;

White lead has also advanced during the past week, the price to-day being: White Lead per 100 lbs.:—Decorator's pure, tin lots, $14.55; less $14.85. Decorators Special per 100 lbs.: tin lots $13.55 less $13.85.

Jobbers throughout the city are advising their travellers to book all orders possible for fall delivery at once. They advise that they have advice from eastern manufacturers stating that the steel situation is exceptionally grave, and that it is almost impossible for anyone in the West to realize just how serious this is. Practically the entire output of some of the manufacturers is being used in making shells, and they state that it may be impossible for them to turn out any more nails this year. The jobbers have, however, protected themselves to a great extent, but it must be remembered that war orders, for shells at least, take preference over the ordinary lines of merchandise. This being the case, retailers should not judge the jobbers too harshly if orders are shipped minus several items which they claim to need badly. The jobbers will all be in the same position, and it is up to everyone to make things as easy as possible all round.

WHY SASKATCHEWAN OPPOSES M. O. TAX

(Continued from page 38.)

see that their accounts are secured, and follow up their collections better.

At the present time the biggest advantage the catalogue house has over the country retailer is in it's buying facilities. It follows then that if a retailer is to compete we must improve our present system of buying. This can, and will have to be done, if the retail merchant is to hold his place in the community.

Advocates Closer Relations With Farmers

For some considerable time the Saskatchewan Association has been advocating the Community Building plan; that is, for the farmers and the merchants of any district to combine better for their mutual interests. When all is said and done the interests of a farmer are just as great in his district as those of the retail merchant, and we are convinced that if merchants and the farmers got together on this and organized clubs where this question and similar ones could be thoroughly discussed it would go a long way towards doing away with catalogue buying. It can hardly be done, however, until the merchants abandon their petty jealousies and work together more for their particular town.

Hundreds of merchants both in this country and the States are meeting and beating mail order competition, and do not want taxation at all, realizing as we do that the comparatively small sum gained from such taxation would be more than offset by the additional advertising features the M.O.H. would gain.

The community building idea is growing very rapidly in the States, particularly in the Middle West, and there are very few small towns that now do not have their farmers' and merchants' clubs. These towns are meeting the competition and the same thing can be done in the West here, if we learn from the experience of our fellow retailers over the border.

It has been shown that the meeting held by our executive in Regina was an informal one, and that the proposed taxation was discussed merely to learn of the arguments for and against it. Every merchant is interested in this big question and should make it his special business to be present at the convention that will be held in Regina May 9, 10, 11, next, and let us have his views upon this subject.

If it is shown there that taxation would provide a remedy for catalogue competition then the association will use every effort to have such taxation brought into being.

GOPHER SHOOTING CONTEST

Particulars regarding a very interesting gopher shooting contest have recently been announced by The Remington Arms Union Metallic Cartridge Company, Windsor, Ont. The contest will be on from May 1 to June 10, and advertising matter, entry cards, circulars, etc., are now being distributed to the trade. The idea is to enroll the young people of Western Canada into an army of sharpshooters against the gophers. The plan has been approved by the ministers of agriculture of the prairie provinces. Merchants will be supplied free with entry cards and descriptive circulars which merchants can mail out over their own signatures, to the boys and girls in the neighborhood, telling them of the contest and prizes offered. A handsome big score card 25 x 38 in colors is also supplied. The card is to be displayed in the window or displayed in the store, and the prizes can be grouped around it. As for prizes the company will donate a No. 6 single shot 22 calibre rifle, which they recommend for a good second prize. Other prizes suggested are knives, boy scout hatchets, boxes of cartridges, etc.

In addition to all other features the company will donate a grand western champion shot prize consisting of a Remington U. M. C. model 10a pump-gun, to the contestant who kills the largest number of gophers in the three prairie provinces under the rules of the contest.

The rules of the contest as announced by the retailer to his customers are as follows:—1—Each contestant will sign entry card which he gets from us. 2—Any boy or girl can enter any time free before close of contest. 3—Contest runs from May 1, 1916, to June 10, 1916, inclusive. 4—Results will be judged according to gopher tails handed in to us, each tail counting as one point. Contestants must abide by our decision. We guarantee a square deal to all. 5—Each contestant must use Remington-U.M.C. 22's, bought here for all gophers shot in connection with this contest.

Retailers can secure complete particulars by requesting same from the company.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

IN this article is described the method to follow in the developing of patterns for a 3-piece and 4-piece elbow.

Fig. 1 shows the plan and elevation of the 3-piece elbow, both 90 degrees, with A B the same diameter as D E.

First determine the diameter of the elbow required, as well as the length of throat. ID is to be known as the throat and EF as the heel of an elbow.

With C as centre, draw the dot ted lined arc B.D., and with distance A.B. as diameter draw another arc from A to E, using C as centre.

Next divide the arc A E into four equal parts, which, seeing that the elbow is 90 degrees, will represent 22½ degrees each.

A three-piece elbow pattern is required, therefore the centre piece must represent 45 degrees and the end pieces 22½ degrees each.

It is only necessary to develop one pattern.

Now draw plan as shown. and divide it into a number of equal parts 1, 2, 3, 4, 5, 6, 7, and repeat. Then draw a stretchout line by extending line D.E., and transfer the measurements from plan to this line, and erect perpendicu lar lines from points on line D.D..

Next draw a number of perpendicular lines intersecting 1, 2, 3, 4, 5, 6, 7, on plan until mitre line I.F. on elevation is also intersected.

From each of the points of intersection, draw a number of horizontal lines through the perpendicular lines erected on stretchout line D.D. of pattern.

By drawing another line through each point where these horizontal and perpendicular cross, the pattern for a three-piece elbow is developed.

In Fig. 2 is shown the plant and elevation of a 4-piece elbow, the elevation is drawn in a very similar manner as described in Fig. 1, except that arc AE must first be divided into 6 equal parts. EF represents one part.

A four-piece 90-degree elbow is made up as follows: 2 pieces 15 degrees each, and 2 pieces 30 degrees each.

The mitre D. E. K. F. represents the mitre from which the pattern is developed.

Instead of drawing a line through points of intersection as shown in pattern of the 3-piece elbow, that is, if developing an actual pattern, the scratch-awl may be used by punching a small hole at each point of intersection. Then by taking the snips and cutting the material from K to F, and F to K, D.E.D. will represent the pattern required for a four-piece elbow.

(Continued in next issue.)

PATTERNS FOR THREE & FOUR PIECE ELBOWS.

IN PRACTICE THE SHEET-METAL MAY BE PIERCED WITH SCRATCH-AWL AS SHOWN IN PATTERN BELOW.

WEEKLY PAINT DEPARTMENT

Eighteen Hundred Dollars in Prizes

Improvement League of Montreal Taking Active Step to Create Interest in Clean-Up and Paint-Up Movement—Effect of Campaign on Hardware Trade

FIFTEEN hundred dollars in cash prizes, and diplomas for children, will be offered as incentive to Montreal citizens to take an energetic part in the clean-up campaign which will be held in that city from May 14 to 20. And not only will the Civic Improvement League offer the handsome cash prizes referred to for the neatest and cleanest yards, and award diplomas to all children making an honest effort to play an effective part in the campaign, but there will be 60,000 books of instructions for the school children, and 60,000 pamphlets to be delivered to their homes, in which the benefits of cleanliness and neatness will be dealt with from the standpoint of pride in civic appearance and protection to public health. Further than the sums referred to for the clean-up week Montreal's Improvement League will give prizes for well-kept gardens and lawns during the summer and in the autumn there will be diplomas offered to encourage activity for the fall clean-up.

The clean-up campaign is one in which the retailer, and particularly the hardware retailer, should take a vital and active interest. It can be made to increase the music of his cash-register. Whether it be the parent or the child, the spring cleaner-up requires certain equipment or implements wherewith to clean. If it is interior cleaning there will be need for paint, for varnish, for enamel, for mops, for tacks, for wallpaper, for polishes, for a stepladder, for picture wire—or for one or more (mostly more) of the hundred and one things required to put the house shipshape, or houseshape, for the summer months after the coal-consuming days of the close season.

Then when the housewife is endeavoring to get her share of the home activity of her spouse in beating and relaying carpets, hunting up the screen doors and the window fly-obstructions and such other little jobs as usually end in discolored thumb-nails (with or without attendant use of appropriate language); then it will be found that the back yard demands attention. There will be fencing to paint, flower beds to lay out, vegetables to plant—and there will be raking and hoeing and spading and shovelling to be done with what rakes and hoes and spades and shovels the neighbors did not borrow the previous autumn.

Cleaning-up is a contagious form of spring fever. The first germs may not seem to have much effect, but they multiply rapidly. Only one portion of the domestic system may at first be affected but the cure in that quarter will reveal the fact that there is need to go further. One portion of the premises cannot be very well improved without calling attention to the fact that other portions require like treatment. Thus the activity spreads and when it reaches the borders of one man's property it does not stop; its influence goes further and is likely to affect the whole street or block or community before it is stopped.

And about the time the cleaning-up is completed and the onions and the radishes planted, it will be discovered that nature unaided has worked her yearly wonder with the front lawn before there is a green peep from the vegetables. A lawnmower will be required, or clippers, or something else which the hardwareman has to sell, while Old Sol will soon dim the first freshness to a shade of brown or tan if there is not a sprinkler or an active hose.

And so it goes throughout the summer. Every lawn and every garden needs a great deal of attention, The particular amount of that attention will depend to a very large extent upon the moral pressure brought to bear upon Mr. Citizen as to his duty to himself, to his family, to his neighbor and his community. Improvement leagues and horticultural and other societies working for cleaner and brighter towns and cities can do much and the hardware merchant will do well to co-operate so far as possble; even where there is no organized effort, displays of seasonable lawn and garden equipment or advertising calling attention to where they can be secured will do considerable towards arousing the proper spirit of spring.

What "Clean Up and Paint Up" Movement Means

For two or three years it has been the custom of many Canadian towns and cities to have a general public and private "Clean Up" week between May 1 and May 15. This, year it is hoped, the movement is to have a still wider scope and that many more towns will undertake to have a week in which the civic housecleaning is done. It should be the aim of all people to clean up and brighten their homes within. It should also be their aim to make the exteriors, the alleys, yards, lanes, back lots and other unsightly places more presentable. Everybody, old and young, should lend a hand to this very necessary work. Hardwaremen and paint dealers should do all in their power to help the movement along. It will not only benefit them financially, but will make their town or city a more wholesome place in which to live.

YOUR greatest asset is the confidence of your customers. If you have this in full measure, you are sure of good business which no competition can take away permanently.

JAMIESON'S Crown and Anchor Brand

On Building a Business

Your customers for paints and varnishes rely on you to give them what will satisfy them. Price may play its part at the beginning of the sale, but in the end be sure of this; it is *quality* that your customers desire. Always urge your customer to consider the item of satisfaction.

Established 1858

Your Good Name and Ours

For the paint business it is exceedingly simple and easy to *lower* quality —and the temptation with many is irresistible. But for 58 years we have adhered to the basis principle of our business which is: Quality first, last and always. This principle has conserved your good name and ours.

Write us if you are not stocking the Jamieson line of paints and varnishes, for our proposal to you, remembering that our name and history allied to your name and business will add to the asset of confidence referred to above.

MADE IN TORONTO, Can.

Benjamin Moore & Company LIMITED

WEST TORONTO

If interested, tear out this page and keep with letters to be answered.

EVENTS IN THE TRADE

Personal

W. H. Rumble, of Victoria Harbor, Ont., has been in Toronto on a business trip during the week.

A New Store

Hyslop's Hardware, New Westminster, B.C., has purchased the hardware and sporting goods stock of M. J. Knight & Co., Ltd., and has opened up in the Central Hotel Building.

New Firms

Watrous, Sask.—E. C. Sparrow, of Spokane, Wash., will open a store here, known as the Watrous Bazaar. A stock of goods will be carried, ranging in price from 5c to 25c.

Opened With a Dance

Spirit Lake City, Alta.—A dance was held on St. Patrick's Day in the new hardware store of H. H. McLeod. A large crowd was in attendance, and dancing was kept up till 3 a.m. A new stock has been ordered.

J. H. Ashdown Returns

J. H. Ashdown, head of the Ashdown Hardware Co., Ltd., returned to Winnipeg this week. Mr. Ashdown's health is greatly improved, and it is hoped that it will be completely restored in a week or two. It is eight weeks since he left for the Mayo Hospital at Rochester, Minnesota, though the last fortnight has been spent at Minneapolis and St. Paul.

Putting Up New Store

Grand Prairie, Alta.—On their present premises on Third Avenue South, J. Thompson, of the Thompson Hardware Company, announce that preparations will commence immediately for the erection of a large store, 32 by 80 feet, with a large warehouse at the back. The company has engaged a tinsmith and sheet metal worker, who will have office and shop at the back of the building.

On His Western Trip

J. A. Hossack, sales manager of the Lufkin Rule Co., will regretfully pack his grip next week, and start on his annual spring trip to the coast. All the wholesale hardware buyers in the West will have a chance to welcome the genial Jimmie within the next six weeks, and we give them fair warning that he has increased the capacity of his order book for the occasion.

EXHIBITORS AT TOY CONFERENCE

(Continued from page 34.)

TOY PRODUCTS COMPANY OF CANADA, Toronto.—Mechanical wood toys, games, ring toss, gramophones.

SHURLY-DERRETT,LTD., Toronto.—Skipping ropes, sleigh skates, hammocks, soldiers, battleships, beavers.

W. WILLIAMS, Montreal.—Dolls' tea sets in boxes, bedroom sets in boxes.

E. SKAT PETERSEN, Toronto.—Tin soldiers, showing the various Canadian regiments. This was a very attractive display, showing a model of trenches with sandbags, wire entanglements, soldiers, encampments in rear, farm scenes, soldiers on the march, pontoon bridges.

MACDONALD MANUFACTURING CO., LTD., Toronto.—Metal packages, novelties, engines, horses, cattle, driving reins, regiments of soldiers, children's reins with bells.

CANADA TOY CO., Toronto.—Three-wheel kiddies' car.

SCHULUTZ BROS. CO., LTD., Brantford.—Teddy-bear rockers, children's pool tables, billiard games, triangleo games, crokinole boards.

IDEAL BEDDING CO., LTD., Toronto. — Dolls' beds.

NEWMARKET METAL TOY CO., Newmarket.—Railway cars, boats, hook and ladder, dump carts, automobiles, elephants. This exhibit caused considerable comment.

MOYER-SHAW MANUFACTURING CO., Windsor. — Cash register banks, children's typewriters, pop guns.

TORONTO WOMEN'S PATRIOTIC LEAGUE.—Monkeys, dogs, cradles, Circus Billy, golliwoggs, Russian dolls, Sister Susy, Red Cross Nurse, Miss Canada.

THIRD OF SERIES NEXT WEEK

The concluding article of the series on how to prepare the painting surface and on troubles experienced by dealers, which has been written for Hardware and Metal by F. J. Penberthy, manager of Lowe Brothers, Ltd., Toronto, will appear in next week's issue. This is a very practical series of articles and a study of them by the dealer should help greatly in solving some of his difficulties. Two articles have already appeared. Merchants should not fail to read the last one of the series.

WEEKLY PAINT MARKETS

(Continued from page 52.)

quiries from all over the world are going to the United States, and it looks as if American producers will be called upon to supply the bulk of the world's demands. This naturally affects the Canadian market, as the bulk of this material used here comes from the States. There is little doubt but that high prices for blue stone will prevail until the termination of the war.

White Lead.—The market is very firm at the big advance announced last week. The pig lead market is very strong, and there is no indication of any decline in prices, the position of this metal being very strong owing to the heavy demand and present scarcity. Unless the pig lead market weakens in the near future, higher prices for white lead are very probable, notwithstanding the present extraordinary level.

Mixed Paints.—The market has become much firmer since the big advance in white lead, and the trade and higher prices for ready-mixed paints is now very probable.

Putty.—The situation is unchanged and prices holding firm. The following prices are being quoted for standard putty in less than ton lots:

	Per 100 lbs.
Bulk, in casks	$2.65
Bulk, in 100-lb. drums	2.85
Bulk, in 25-lb. drums	2.95
Bladders, in barrels	3.25

Pure putty, 70c per 100 lbs. advance.

MEETING MAIL ORDER HOUSES ON STOVES

(Continued from page 35.)

by leaps and bounds. Recent announcements in Hardware and Metal stated that two of the largest mail order houses in Canada are establishing new distributing branches for mail order departments only. Those who are making a close study of the methods of mail order merchandising and who are in close touch with the situation are those who most realize that a remarkable development of mail order buying is taking place in the Dominion, and it can only be checked by the combined efforts of retailers, wholesalers and manufacturers.

A surprisingly large number of small foundries in Canada are busily engaged in making stoves for mail order selling. The same applies to the manufacture of many other products which are finding a ready sale by the mail order route.

DO YOU KNOW YOUR CUSTOMERS' NAMES?

Does the hardware merchant realize the value of being able to call his customers by name? It is flattering and pleasing to most people to be remembered and to be called by name. It is natural that the customer will return to the one who knows him personally.

Some of the most successful politicians are those who have cultivated this faculty of remembering names and faces. It is stated that the remarkable success which William Jennings Bryan had as a politician was due largely to this faculty. After only a casual meeting with men in a gathering where perhaps he met hundreds of other men he could recall having met such and such a person. This faculty with him was cultivated to the nth degree.

From the point of view of salesmanship this is a most valuable asset for any merchant to cultivate. It lets the prospective customer see that the merchant has an interest in him keen enough to at least remember his name. In small towns the hardwareman will possibly know most people. But there are always new people dropping in. It is a great assistance to business to know your customers' names—and to call them by name.

FOSTER BROS.' Butchers' Knives

Every blade is hand forged. Every blade is hardened and tempered RIGHT. Every handle fits the grasp.

Every knife

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 30.—At writing there is a tension in the air in paint circles, a tension which portends immediate developments. The probabilities are that within a few days—perhaps within a few hours and before this reaches the reader—there will be more or less sweeping advances made on ready mixed lines. The developments in the lead market referred to last week, which have been followed by still more severe conditions in the "pig" situation, have forced manufacturers to give immediate attention to their selling prices. At last report we stated "there is some question whether the present prices will continue throughout the mouth of April" but at that time such early consideration of the matter as is indicated by this week's developments could not be predicted.

The situation of the manufacturers is that the constant rise of the cost of raw materials has been such that at the present time paint is being delivered on bookings at a price which would represent a distinct loss on the cost of production represented by the prevailing markets. Not only has there been the remarkable upward movement of lead to which reference has been made, but zinc continues at its high level and is difficult to secure at almost any price while colors are steadily climbing with the rising cost of chemicals; at the same time there has been no relief as regards turpentine and the recession of a few cents on oil does not act as any effective offset to the advances referred to. Even at the time the last adjustment of prices was made it was known that higher quotations on paints were warranted but manufacturers were reluctant to made advances if there was a chance of a reaction. Instead of the reaction hoped for, however, there has been an upward movement for practically every ingredient entering into paint manufacture.

So far as business is concerned the rising market has encouraged some further ordering and conditions are generally satisfactory in this regard for the season of the year. Deliveries are going out well.

Linseed Oil Easier. — Under the influence of a weakening market for flax there is a distinctly easier tone to the linseed oil situation. As compared with a range last week from 95c and 98c to $1.00 and $1.03 for raw and boiled respectively. present quotations are generally confined to 94c and 95c and 97c and 98c for raw and boiled respectively. This indicates a decline of anything from 1 cent to 5 cents within the range, although some houses formerly quoting at the then minimum have not changed. Further there are reports to be heard that business is being done below the lowest of the quotations given. Montreal basis is as follows:

	Raw	Boiled
1 to 2 barrels	94c-95c	97c-98c
3 to 5 barrels	93c-94c	96c-97c
6 to 9 barrels	92c-93c	95c-96c

The Lead Situation. — With further strength in the market for pig since the last pig advance on white lead was decided upon, the market is very strong and the condition that quotations given are for immediate acceptance and immediate delivery only is being strictly adhered to. Reports are to be heard that higher prices would be warranted but there are no definite indications of an early advance, while, on the other hand, it may be accepted that with any material reaction there will be lower prices to encourage consumption. Montreal basis: $13.80 for ton lots and $14.10 for less than tons.

Gasoline Steady and Firm.—There is no change in the quotations for gasoline and benzine but prices are firmly held and indications continue that the upward movement is likely to continue with advances from time to time while war conditions prevail. Quotations follow:

Gasoline, in barrels	33c
Gasoline, in drums	30½c
Gasoline, tank wagon	30c

Turpentine is Steady.—There has been little change recently in the turpentine situation and there is still a considerable spread in the quotations to be heard. There are prices from 77c to 80c for single barrels with 1 cent off for larger quantities.

Miscellaneous Items. — Arsenate of lead and red lead are both strong on the advances reported last week. Paris green is very firm with prospects of higher prices if the demand proves more than the comparatively short supply available. Glass well maintains the higher level reported last week and putty is firm on comparatively small demand. Zinc continues at its high level and supplies are difficult to obtain. Colors are steadily advancing with the exhaustion of certain supplies and increasing cost of chemicals.

TORONTO

TORONTO, Ont., March 30.—The arrival of more seasonable weather has improved the outlook in the paint trade, and dealers' stocks will begin to move out in greater volume. The big advance in white lead has made higher prices for mixed paints more likely than ever, and if the lead market holds at the present level for a time mixed paints are also certain to be affected. The weakness in the linseed oil market has resulted in a decline in prices, following a further drop in flax seed. Turpentine is a shade higher, although the situation has not changed to any material extent. A new and revised paint list is being prepared, and will be issued shortly; apart from this there have been no developments of any particular importance in the glass market.

Linseed Oil Declines.—The weak tendency in the linseed oil market, reported last week, has resulted in a decline of 3c a gallon. The seed market has been falling, and the demand for oil comparatively light, thus giving a weak undertone to the market. The demand for oil is expected to improve considerably as the season gets older, which may help to stiffen the market and maintain prices at approximately the present level, or possibly a little higher. The following prices are being quoted in Toronto for linseed oil:

	Raw.	Boiled.
1 to 2 barrels	98c	$1.01 per gal.
3 to 5 barrels	97c	1.00 per gal.
6 to 9 barrels	95c	0.98 per gal.

Turpentine Up.—The market is a shade stronger, having advanced 1c, making the price 80c per gallon. This may be the top of the market for the meantime, as it is believed that turpentine is now about as high as it will go. The new turpentine will soon be on the market, which will have a tendency to depress prices. The following prices are being quoted for turpentine in Toronto: 1-barrel lots, 80c; 2 to 4 barrels, 79c; and 5-gallon lots, 87c per Imperial gallon.

Glass.—A new pane price list has been prepared, and is now in the press. The list has been revised in an upward direction owing to the increase in manufacturers' costs. The gross prices, although higher, will be subject to a discount. The situation in the trade is unchanged, and prices are very firm.

Gasoline.—A further advance in gasoline and naptha will probably be made early in April. Crude oil continues to advance steadily, and the consumption of gasoline will materially increase with the improvement in the weather. Gasoline is unchanged at 32c, and benzine at 31½c per gallon.

Blue Stone.—The demand for blue stone or copper sulphate continues heavy and the market is very strong. Prices are still very high, which is due to a great scarcity of this material. In-

(Continued on page 50.)

THERE ARE TWO SIDES TO THE VARNISH QUESTION

The Retailer's Side—naturally considers the sound policy of handling nothing but reliable Varnishes, that inspire confidence in the customer's mind, and so increase sales for the paint department.

The Consumer's Side—He is always most particular regarding the **performance** of the Varnish he buys. If not satisfied, he buys no more of that kind, thus practically forcing the dealer to change his stock to a brand like Maritime Spar Varnish.

MARITIME SPAR VARNISH

Maritime Spar Varnish represents a wide range of uses, and so a large circle of sales. It is not only suited to Maritime craft, but for all those household and trade purposes where a water-resisting Varnish is indicated.

Maritime Spar Varnish is put up in ½ pints, 1 pint, ¼ gals., ½ gals., and 1 gal. Please advise us early as to your requirements.

The Consumer demands of this Varnish that it shall resist the action of hot and cold water, and degrees of heat and cold. In this, he will never be disappointed, rather abundantly gratified with results.

The Consumer is supplied with small sample tins giving him just sufficient Varnish to make a thorough test on some small article in actual use.

This Churn Is No Experiment

Every farmer knows the Daisy.

And so does every farmer's wife.

It has been her friend for more than 25 years.

You are not experimenting on your customers when you sell them a Daisy Churn. Daisy Sales increase your good reputation.

BARRELS HAND MADE.

It's very seldom a stave ever breaks in a Daisy barrel. That's because every barrel is hand-made and staves are of an even thickness all around the barrel. When barrels are machine made, very often the machine planes more from one side of the barrel than the other, leaving the staves on one side very thick and those on the other side very thin. As a consequence the staves break.

Hoops are center-punched to keep them firmly in place when the churn is standing idle.

The frame is made of 1 x 3-16-inch flat steel riveted together, is compact, neat and strong. It can be put together in a few minutes and adjusted to rest perfectly level on the floor by means of the cross board. This is better than tightening up a lot of little stove bolts as must be done with other churns.

The Daisy Churn can be fitted with tight and loose pulleys and run by a small gasoline engine.

Re Gauges of Sheets.
In the quotations which follow on sheets, it is advisable to note that Queen's Head, Fleur de Lis, and Gorbal's Best Best, also Colborne Crown are English gauges, while Apollo and Premier are U.S. gauges. American 10¾ oz. is the same as English 28 ga.; American 28 gauge is the same as English 26 ga. The heavier gauges are almost identical, the English sheets running slightly lighter than the U.S. standard.

SHEETS, CORRUGATED

READ THIS BOOK ON WINDOW DRESSING

It is filled with illustrations of attractive displays — prize-winning displays in fact—because the booklet is the result of a window-dressing prize contest. Each picture contains a suggestion. Each suggestion can be worked into your display of

SIMONDS SAWS

A descriptive story runs through the booklet, telling some interesting facts about window trimming, which is a part of the service we offer Simonds Saw Dealers. No matter whether you handle Simonds Hand or Crescent Ground Cross-Cut Saws, you should have one of these stories about window dressing. Simonds Saws, as you know, are very high-grade saws, therefore the suggestions in the book must also be high-grade. A copy of the booklet may be had for the asking.

"LINGERWETT" It Works Like Lightning

The Fast Cutting, Slow Drying, Paint and Varnish Remover

Nothing in paint or varnish can stop "LINGERWETT." It cuts varnish instantly and requires no knife scraping. Shellac moves a little slower, but "LINGERWETT" will lift it quicker than any other method. Paint melts in a few minutes and "LINGERWETT" cuts the labor in half.

It Stays Wet, This "Lingerwett"

That's partly the reason for its popularity. It will remain wet for a number of hours, that is why the hardest paint or enamel will dissolve under its influence.

Remember the Name, **"LINGERWETT."** *None Other Is As Good*

SILKSTONE

(REGISTERED TRADE MARK)

FLAT WALL COLOURS

"Silkstone" is a business-builder—a producer of substantial profits — giver of universal satisfaction.

"Silkstone" can be washed with soap, without losing any of its beauty.

It is *sanitary* and *durable*. Is more economical than distemper colours and can be used where distemper cannot.

Dries smooth as silk, hard as stone.

Send us a trial order and test its selling qualities.

Have we an agent in your town?

If not, write us for agency proposition.

The Means to the End of a Perfect Wash Day

NEW IDEA ELECTRIC

Power Washer and Swinging Wringer

Washes and Wrings at the same time or separately. All the operator has to do is attach it to an ordinary light socket, turn the button, fill and empty the machine. The Wringer swings to and works in any position over a tub or clothes basket.

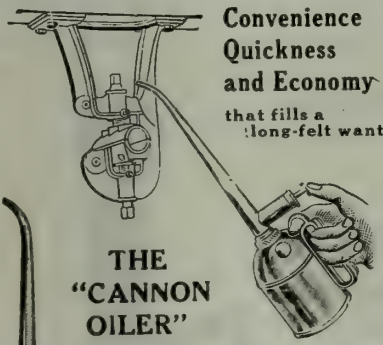
It is very Simple, Powerful, Noiseless and Cleans thoroughly.

Can be furnished without the Electric Motor. Fitted with pulley for Belt connection with Gasoline or other Engine Drive.

IDEAL FOR HOUSEHOLD USE.

Made only by

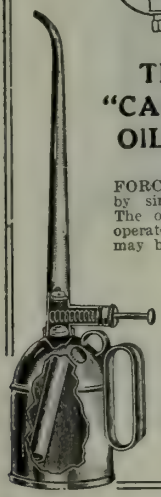
Cummer-Dowswell, Limited, Hamilton, Ontario



Convenience Quickness and Economy

that fills a long-felt want

THE "CANNON OILER"



FORCES THE OIL ANYWHERE by simply pressing on the plunger. The oil is entirely controlled by the operator in whatever position the can may be held.

SAVES THE OIL. As the flow of oil ceases the instant the pressure on the plunger stops, not a drop of oil need be wasted.

TRY IT. THE SALES WILL SURPRISE YOU.

WINNING THE BUYER'S FAVOR

THE best possible buyer is not made an actual buyer at a single step. It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising. Under ordinary conditions it should not be expected to do more.

"HENDRYX"

A Word for Quality

No. 440

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

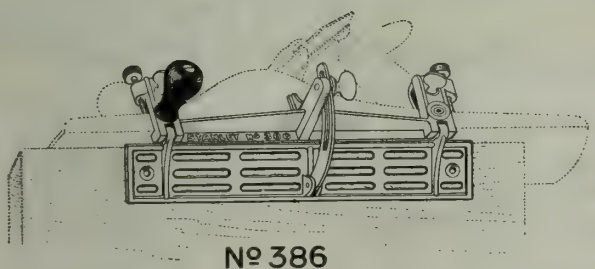
Stanley Tools



No 386

STANLEY JOINTER GAUGE FOR IRON PLANES

A tool that will enable the workman to plane bevels of any angle between 30 and 90 degrees, or to square up the edges of boards with extreme accuracy.

The method of attaching same to a Plane is such as to insure its being absolutely rigid when in use.

All parts except the knob are of metal and the joints and bearing surfaces are machined.

Show this new Gauge to your wood-working customers. You will find them to be greatly interested. Special circular containing complete description upon request.

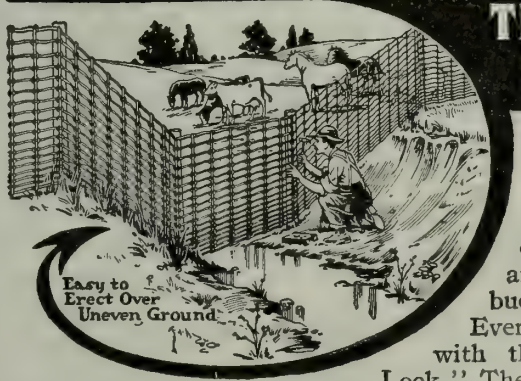
PEERLESS PERFECTION
THE FENCE THAT STAYS "PUT"

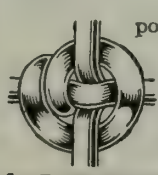


PEERLESS Perfection is one of the easiest fences to erect, because it stays "put." It can be erected over the most hilly and uneven ground, without buckling, snapping or kinking. Every joint is locked together with the well-known "Peerless Lock." The heavy stay wires we use prevent sagging and require only about half as many posts as other fences.

Peerless Farm Fence

is made of the best Open Hearth steel fence wire. All the impurities of the steel are burned out and all the strength and toughness left in. Makes the fence elastic and springy. It will not snap or break under sudden shocks or quick atmospheric changes. Our method of galvanizing prevents rust and the coating will not flake, peel or chip off.

Send for catalog. It also describes our farm gates, poultry fencing and ornamental fencing.



Agents nearly everywhere. Agents wanted in unassigned territory.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED—A GOOD SALESMAN CALLING on hardware dealers and painters, also a good railroad salesman, to take a well-known paint specialty line on commission. All enquiries treated confidential. Apply Box 260, Hardware and Metal. (tf)

WANTED — POSITION AS HARDWARE clerk, with Western experience; steady employment. Can furnish best of references. Box 253, Hardware and Metal. (14)

WANTED — BY MAN WITH THOROUGH knowledge of hardware and paints, to represent firms on commission in one of the best districts of Eastern Canada. Enquiries addressed "Commission" care of this paper will bring full particulars. (15)

WANTED — POSITION AS HARDWARE salesman. Have had 15 years' good experience. Apply Box 274, Hardware and Metal. (14)

WANTED—FURNACE SALESMAN — MUST be capable of figuring and letting out a job, and practical enough to install a furnace, with help, when necessary. Findlay Bros. Co., Ltd., Carleton Place. (14)

FOR SALE

FOR SALE — GENERAL HARDWARE IN best farming and manufacturing district of New Ontario. Only reason for selling is poor health. Stock $10,000. Will accept special rate and good terms for quick sale. Apply L. C. Wideman, Charlton, Ont.

FOR SALE—HALF INTEREST IN HARDware business in a fast growing suburb of Toronto. A fine opportunity for a progressive young hardware man capable of managing store. Will sell outright if desired. Apply Box 272, Hardware and Metal. (13)

FOR SALE — HARDWARE BUSINESS IN Southern Saskatchewan, in one of the best wheat growing districts in the province. Town has three elevators, and good territory to draw from. No opposition. Good store that can be rented cheap. Stock and fixtures, about $3,500.00. Owner has another store, and cannot look after the two. Apply to Box 270, Hardware and Metal. (16)

TWO HARDWARE STOCKS AND GOODwill, well established, in two of the most promising towns in New Ontario; territory opening up rapidly; value of stock in first store $10,000; value of land and dwelling, $5,000. Second store, $5,000 stock; $7,000 buys stock, land and building. Terms. Business being sold on account of death of owner. Apply Box 184, Cochrane, Ontario. (11)

FOR SALE — FIRST-CLASS HARDWARE and stove business in good manufacturing town, with all factories busy. This stock is all in first-class shape and all bought at the old prices; will run about $5,000. This is a money-maker and worth investigating. Box 263, Hardware and Metal. (14)

FOR SALE—SET OF TINSHOP TOOLS IN good working order, also saw table pulleys and shafting. Morgans Supply House, London. (15)

FOR SALE — FIRST-CLASS HARDWARE and stove business in good manufacturing town, with all factories busy. This stock is all in first-class shape and all bought at the old prices; will run about $5,000. This is a money-maker and worth investigating. Box 263, Hardware and Metal. (14)

FOR SALE.—HARDWARE BUSINESS IN Saskatchewan, on main line C.N.R. 300 miles from Winnipeg. $1,500.00 will handle stock. Buildings and dwelling for sale or rent. Average sales about ten thousand. No opposition of any kind. H. Deacon, Invermay, Sask. (15)

FOR SALE — FIRST-CLASS HARDWARE and tinsmithing business in good progressive Ontario city. This is a good clean stock. Best reason for selling stock and fixtures. About $6,500.00. Apply Box 273, Hardware and Metal. (16)

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

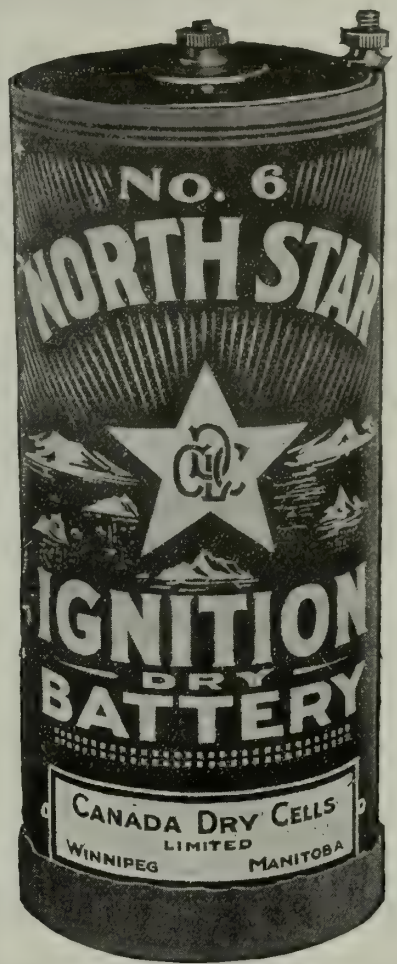
In Demand

There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA Glass Tank Sprayer

The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover. The pump cylinder is made from L. X. tin and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock. Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

The Eureka Planter Co.
LIMITED
WOODSTOCK, ONTARIO



Satisfaction

is the best assurance of future patronage.

Your line of batteries is sure to give top-notch service and satisfaction if it is composed of

"North Star" Dry Cells

The "North Star" gives an extra measure of service—a service that makes it by far the cheapest in the end.

The Western Battery for the Western Need.

Your jobber will supply you quickly.

THIS IS TO INTRODUCE OUR

New Catalog

which we wish to be in the hands of our customers and prospective customers throughout Canada.

It contains a complete line of shelf and heavy hardware, including:

Galvanized Wire, all kinds	Galvanized Sheets
Wire Fencing	Black Sheets
Poultry Netting	Window Glass
O & A Wire	Builders' Hardware
Annealed Wire	Sash Weights
Fine Wires	Carpenters' Tools
Fence Staples	Mechanics' Tools
Iron Pipe	Beaver Board
Pipe Fittings	Building Paper
Iron and Brass Valves	Wall Plaster
Engineers' Supplies	Linseed Oil
Sheet Packing	Paint
Spiral Packing	White Lead

If quantities are required, and high quality and close price are desired, it is most important that you should get in touch with us.

We will equalize freight on your nearest distributing point.

OUR SERVICE IS QUICK AND EFFICIENT.

Shipments are made same day order is received.

WHITES LIMITED

COLLINGWOOD, ONTARIO

WHY it is easier to sell BISSELL'S than not to sell them

Price standardization and *quality standardization*—this is the answer. The woman who buys a BISSELL'S isn't shopping for the lowest priced machine—but demands *the best;* also she knows that the BISSELL'S cleaner or sweeper you sell her today isn't going to be any cheaper tomorrow—at yours or any other merchant's store.

Thus, you can ignore the unstable cleaning device with its ruinous price-cutting wars—you have your market insured.

EQUALLY IMPORTANT

There is no aftermath of complaints as to quality when you make a BISSELL sale—for you *sell* satisfaction with every machine.

Altogether it is certainly easier to sell Bissell's than not to sell them. What argument can you use in offering less reliable machines other than that of cut prices?—Which prejudice desirable customers.

With the introduction of our new $5.00 Household vacuum sweeper ($5.50 in extreme West, $7 and $7.50 in Canada), we equip you to "meet all comers." If you haven't a copy of our *Spring Offer* Announcement, write for one. It contains information of vital importance.

Bissell Carpet Sweeper Co. Largest and Oldest Exclusive Manufacturers of Carpet Sweeping Devices in the World **Grand Rapids, Michigan**

Made in Canada, too **NEW YORK (25 Warren Street)** **PARIS** **Agencies Everywhere**

If interested, tear out this page and keep with letters to be answered.

"It is my opinion that for Big Game the Ross .280 Rifle is the best in the World."

B. K. Miller,
Wild Rose, Wis., U.S.A.

Mr. Miller adds:
"I have hunted and fished in various parts of the world, including British East Africa, but I have never seen a gun the equal of the Ross .280 for big game."

Hunters and expert guides wherever big game is found have learnt by experience that no sporting rifle on the market can approach the Ross .280 in power and accuracy.

The Ross .303 Sporting Models are also very popular — their accuracy, power and fine workmanship have earned them many friends.

Another good seller is the Ross .22 Cadet Rifle. It has been adopted by the Government for use by Cadet Corps and is a rifle that will meet every need of the outdoor man or boy. It is an accurate and reliable arm with sufficient power to kill any except the larger game.

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

If interested, tear out this page and keep with letters to be answered.

To the Canadian Hardware Trade

A New Way To Meet Mail Order Competition

Gentlemen :—

I believe that a statement with regard to the new selling policy of this concern on Domestic stoves and ranges, would be timely and of interest to the trade.

For some years the matter of mail order competition has been a growing problem with the hardware trade of Canada. There is no need to emphasize this, as it has been a matter for discussion at every meeting of hardwaremen which has occurred within the last few years. To my own knowledge, the stove business has been certainly as sharply affected as any other single item. The mail order people have made their quotations on stoves f.o.b. station in the East, whereas the hardware men have made their quotation, as a general rule, "set up in the customer's kitchen." Further, the mail order price has been cash, which is a difficult way for a hardware man to always quote. This has made an apparent difference in price to a farmer buyer of several dollars, which he has not realized until after he has purchased, then, of course, it is too late for the local man to get the business.

Further, in the West this has been made worse by the fact that the mail order man quotes f.o.b. Winnipeg, and in this case the Western hardware man has had the further disadvantage of a big freight bill in his quotation.

In addition to this the mail order house has offered exceptionally good value in certain "leaders" which have made price comparisons still more favorable to the mail order house, and the hardware man has had no means of meeting this competition.

The truth of these statements is demonstrated by the actual experience of most hardware men in Canada, many of whom in every local community have seen the stove business drift out of their hands.

After much thought and much careful planning, our Company have decided to merchandise stoves in a way that will place the hardwaremen on an even basis with any competition they are up against, and the essentials of the plan are as follows:—

First, we have determined on a scale of prices for every domestic stove or range we make, which we will not vary to the largest buyer. Thus, these new, attractive prices will place the hardwaremen in the smallest town, in the same position to buy as the largest stores.

Second, we will advertise throughout this year on a large scale in the leading Journals of Canada, and we will advertise resale prices. We will establish these resale prices delivered in the East, and f.o.b. Winnipeg in the West, on every domestic line we sell, and these prices are cash prices, over which the local man may charge for credit, cartage, setting up, and in the West for freight. This places the hardware man's quotation on the same basis as his biggest competitors.

We have issued a catalogue covering our lines of domestic stoves and ranges, naming prices, in two editions, for the East and for the West, and this catalogue skillfully used by the hardwaremen, will enable them further to compete on a more than even basis with any mail order house, as this is the most complete consumers' stove catalogue ever issued in Canada.

Further, we will absolutely tie up to any hardware man who will adequately display our line in the town in which he is located, with an agreement that if any orders come through his territory as a result of our extensive advertising, he will promptly receive the difference between the resale and the wholesale price.

Certain competitors of ours, perhaps the mail order houses themselves, have stated and will state that the Gurney Company are doing mail order business. The absolute absurdity of this is at once apparent when one considers that on the boiler and radiator line, the connection of the dealer throughout Canada, is vital to us. Further, we desire to state here and now that our one object in formulating this whole plan, is to place our dealers in a position to do the same share of stove business that was open to them 15 years ago, before this new competition entered. The plan we have embarked on is a very expensive one, and unless we do a big business, will net this Company a serious loss, but we believe that the hardwaremen of Canada are big enough and able enough to hold their own in this fight for stove business, if the proper weapon be placed in their hands, and we feel that to-day, under these new conditions, any live hardware man. working in conjunction with the material we can supply, can dominate his own stove field, and keep the business in his own community.

It is impossible to give full particulars in a short statement of this kind, but if any dealer wants to know more about this, we will be most happy to hear from him.

I might say further, that we chatted this over with some of the leading dealers of the country before we embarked on it, and without exception they showed the greatest enthusiasm for this new method.

I think it is only right that the first public statement regarding this should be made through the columns of the trade papers, which have always been most keen along these same lines—to preserve local business to the local man.

Yours very truly,

E. H. GURNEY,
2nd Vice-President.

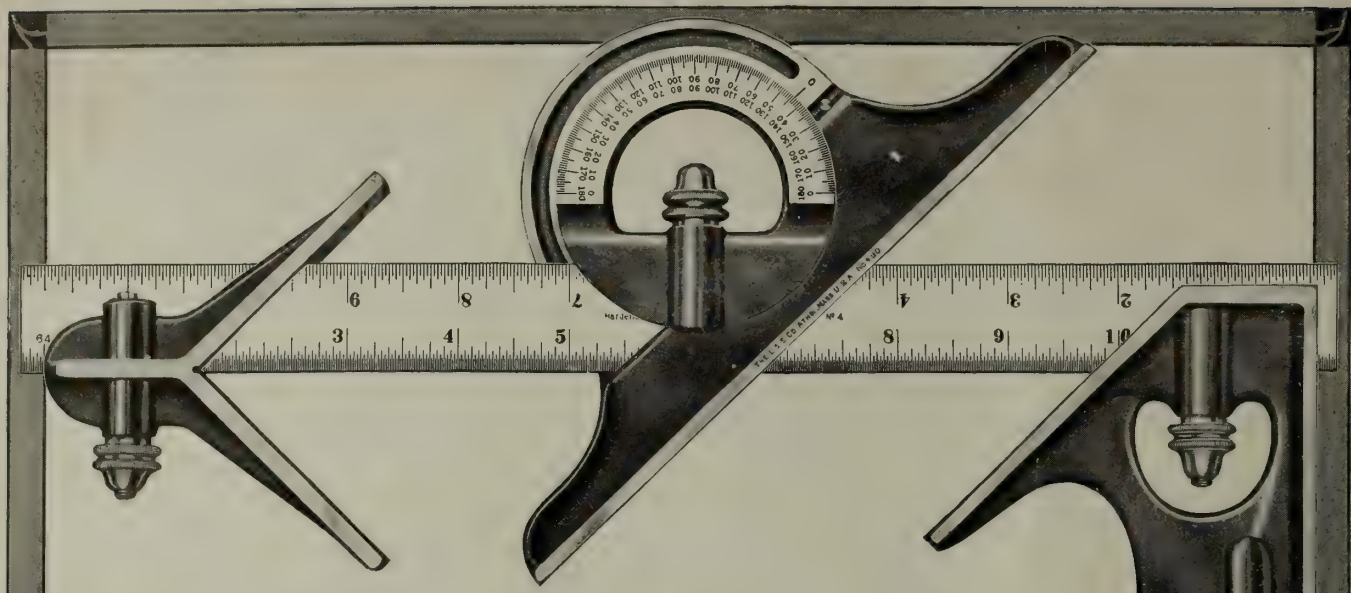
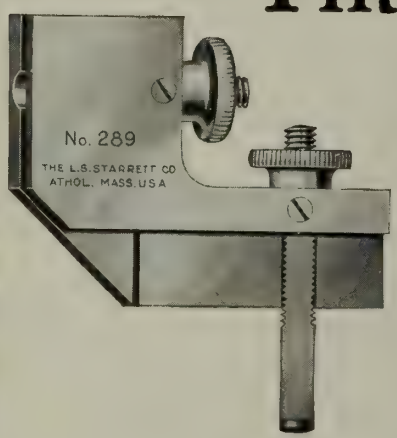
Sale increasing immensely.



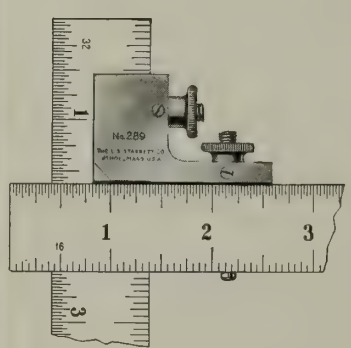
Time Saving Tools



STARRETT tools save time in two ways. One by their unvarying accuracy and another by the quickness and ease of adjustment.

In looking over the Starrett Catalog the mechanic finds many suggestions for making his work easier, more accurate and quicker.

The Combination set, for example, with center-head and protractor has many uses instantly recognized by a mechanic. The adjustment for Combination Squares shown in the margin also has a great many applications in truing up work, laying out key seats, etc.



The Starrett quick adjustment Micrometer is another example of time saving tools. To operate the Micrometer it is only necessary to press with the finger at the end of the plunger, closing it instantly to the point of fine adjustment.

Starrett Tools

include 2100 different styles and sizes of tools and instruments of precision.

The dealer that carries the Starrett line is the dealer to whom the mechanic will go when he buys new tools.

Write for Free Catalog No. 20-MA describing the complete line of fine instruments—steel rules, tapes, squares, levels, hack saws, calipers and dividers, micrometers, gages, speed indicators and many others.

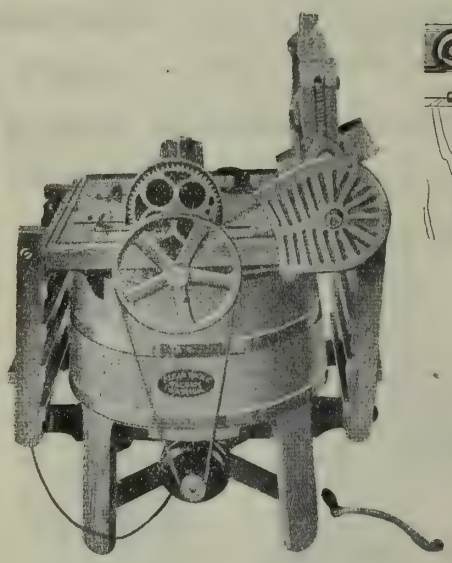
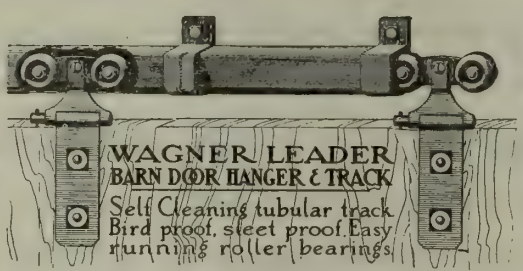
THREE BIG LINES—

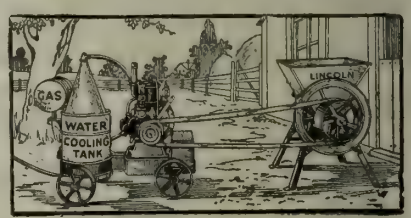
Famous Cushman Light Weight Engines





The Wagner Leader is without doubt the best barn door hanger and track on the market, and will be in great demand by the farm trade this year. Send for Wagner catalog.

One of the "KLEAN KWICK" lines of washing machines. Can be run with gas engine, or the wringer and machine can both be operated by hand. It is quiet in operation, and all the working parts are guarded. Produces twice the action of any machine with valve in stomper. Very simple gear construction.



We want you to handle our 4 h.p. Cushman binder engine. Its light weight and steady power permit it to be attached to rear of binder, etc. With a Cushman you can cut from 8 to 10 acres more and with fewer horses. If in heavy or tangled grain, and the sickle chokes, all they need to do is to stop the team; the engine clears the sickle. Binder runs the same, whether horses go fast or slow or stop. Binder will wear several years longer, as it is not jerked faster and slower by the horses. Attachments furnished for any binder.

2-Cylinder Engines built in 8 H.P., 15 H.P. and 20 H.P. sizes.

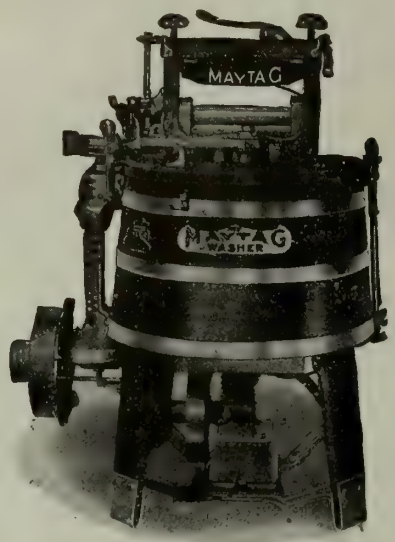
The Maytag Multi-Motor Washer

Announcement Extraordinary!



What the Maytag Multi-Motor Washer Will Do

It operates the washer and wringer. It will operate the sewing machine, churn, cream separator, food chopper—or any group of small machines—that do not require more than ½ H.P.

Now Ready! Something entirely new! Looks good—"makes good"—sells on sight! Every woman wants one! No competition! Only Multi-Motor Washer on the market!

The secret is in the light, powerful, compact little motor that is mounted right on the washer—burns gasoline, kerosene, gas or alcohol. Guaranteed for THREE YEARS.

The price fits the moderate purse, but puts a generous profit in your pocket. GET SOME OF THIS GOOD BUSINESS. Be the FIRST one to supply the demand in your town.

Now, listen! Some live, progressive dealer in your territory is going to make **BIG MONEY** handling the Maytag Multi-Motor Washer—and it might as well be **YOU.**

You positively **CAN** sell this washer and, if you don't, your competitor will—and pocket the profits. Remember, the proof of progressiveness is showing new things **FIRST.** This Washer is the same as our regular Power Washer we have sold for years, except that it has attached under the tub a ½ horse-power, 2-cycle air-cooled engine.

Plymouth Stores Are Rope Headquarters

Surplus strength and extra long life! These are two of the qualities which make Plymouth Rope superior to other ropes.

In 1913 a Nebraska farmer bought some 13-16″ Plymouth Manila for his hay stacker. Used to larger sizes, he feared that this one (all that the dealer had) was too small—said the rope would not last three days. As a matter of fact it lasted nearly two whole seasons and stacked 1,700 tons.

If Plymouth Rope will surprise even the man who already knows its quality, as was the case here, think how it will satisfy other buyers.

The dealer mentioned here likewise sells Plymouth Manila Yacht Lariat Rope, which is as much a leader in its special field as our regular rope is in the general field. And to quote his own words, "There are people that do not trade with us that come into our store and ask for Plymouth Lariat Ropes."

The average buyer appreciates and wants high quality in rope as in other things. That's why Plymouth stores soon come to be known as "rope headquarters."

PREMIER LEADER With Reservoir and High Closet—Coal or Wood

DAVIDSON'S
PREMIER LEADER
Steel Range

The greatest value in a steel range on the market. Remember the Premier Leader is sold at a remarkably low price. We got it out with the intention of making it not only a "Leader" by name, but a "Leader" with the people of Canada.

The oven is made of heavy steel, strongly braced to prevent warping.

The top is made in sections and all centres and covers are strongly ribbed.

The body is made of heavy steel and all lined with asbestos.

The nickelled trimmings are neat and easy to clean. Now is the time to get after the stove business. Order a sample Premier Leader and you will be surprised with the stove sales you will make this coming fall.

Included in the Popular Trade-Marked Brand of Ammunition is

Dominion Canuck

The Canuck shot shell — the newest member, yet old enough to have been proved—came into the Dominion family only after its quality had enabled it to stand up with the Imperial, Sovereign and Regal, its brothers.

But the Canuck has done more, it has brought to the shot shell branch of the Dominion family improvements that have been adopted by all. It brought with it the larger primer—sending a flash into the powder that means all the power possible behind the shot; the harder crimp—no bungling in pumps or automatics and the knurl for the Sovereign and Regal.

For trap and field shooting of all kinds, stock Canuck for those of your customers who want something just a little better.

Registers Imperial Gallons

CANADIAN DEALERS—
This is one of the fastest selling Auto Accessories of the year—

Every Ford Owner needs the Challenge Gasolene Gauge. Show it to him and he will buy it. The reason is simple. Though the car may cost $500 or $600, it is no good without gasolene. The owner cannot afford to be in doubt as to his gasolene supply. At small cost he can ascertain the exact amount at any moment. No guesswork.

The Challenge Gauge will register the contents of a gasolene tank at all times and under all conditions. It is safe, leakless, accurate and durable—outlasting the car. Why not sell them in your neighborhood? A good profit and quick sales for you. It is an important part of every Ford.

Ask your Jobber or write us.

Place your order with the one and only firm who has your interests at heart, and protects you in this way.

Handle your Oils and Gasoline with the

WAYNE PUMP

IT PREVENTS WASTE DUE TO EVAPORATION, LEAKAGE AND SPILLING, AND MAKES THESE GOODS MORE PROFITABLE.

It saves time and labor, as there is no constant filling and handling of measuring cups, and does away with dust and unpleasantness. **Throws a pint, quart, half-gallon or gallon, and measures exactly.**

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts are accurately machined and thoroughly tested, and are interchangeable.

If you are interested in a clean, safe, money-saving way of handling oils and gasolines, jot down a line for full particulars on the Wayne System NOW.

ALBERTA

BIGNESS is the outstanding feature in Alberta to-day. An outsider looking on can't help seeing it.

BIG Farms—BIG Minded Men—BIG Needs for Equipment—BIG Opportunities for the Dealer.

In writing from Calgary for three sets of Giant Traces and the outfits to go with them, Mr. Geo. O'Brien says that he has twenty-four horses, and they are BIG horses. See his letter below.

CALGARY—Enclosed find P. O. Order for $28.50 for two sets of Giant Traces and Equipment and one set of Traces only. I have twenty-four horses weighing from 1,600 to 1,800 pounds, and the harness must be BIG enough to fit them.
Geo. O'Brien.

We had no dealer in Calgary with these goods on hand and had to ship direct. The profit to a dealer on this sample order would be $8.15.

COWLEY—I saw your Ad. in The Family Herald and Weekly Star, and am sending $36.00 for three sets of Giant Traces with equipment. Please send me your booklet, as I will require other goods. Rush the order, as I need it at once.
Jno. M. McBrie.

COWLEY—Having seen your Ad. in Grain Growers' Guide, I am sending $1.50 for one set of Giant Rope Traces.
A. Betts.

No dealer in Cowley. Had to ship direct. A dealer would have made nearly twelve dollars on these sample orders after having paid the freight. Mr. Cowley says he will need some more goods—and who is going to supply his neighbors?

PROVOST—Kindly rush by express complete Draught with Rope Traces, as advertised in the Farmers' Advocate.
W. G. Farquharson.

No dealer in Provost carrying GRIFFITH HORSE SPECIALTIES. Had to ship direct.

WESTLOCK—Please forward at once, by express, one set of Giant Rope Traces. **H. Greenfield.**

Mr. Greenfield would never have gone to the trouble of sending for these traces if he could have bought them in his own town. If we could have returned the order to a local dealer we never would have shipped them.

HORSEGUARDS P.O.—I am sending an order for your Plow Harness as I cannot find a dealer who is handling them. Am sending twelve dollars, as advertised in the Family Herald. Have used one of your Giant Halters for over a year and it has given good service. Sydney A. Barrett.

There is a Giant Halter doing Missionary work for over a year at Horseguards, and now the owner looks around for a dealer selling the GRIFFITH line. It isn't much wonder that he came back for some more goods. ALBERTA DEALERS! This repeat business is great stuff. GRIFFITHS HORSE SPECIALTIES are lively repeaters.

MEYVLAND P.O.—Please find enclosed $1.25 for one Giant Halter, as offered in the Farmer's Magazine. H. Hewitt.

OYEN—Please send at once:
One Griffith Giant Halter $1.25
One Handy Rope Tie ..... .25
$1.50
T. Swindlehurst.

Mr. Thos. Lees, Merchant at Oyen, had taken our Agency for his district, but as his shipment had not left the factory we forwarded the goods to parties opposite and sent him a Credit Note for the profit.

RETLAW STN., DEERING P.O.—Your little Booklet, "What's New For the Stable," came to hand and I am much obliged. Please send me two Giant Halters, as on page 2.
J. Hayward.

Mr. Hayward gave us the name of his regular dealer in Retlaw, but we have not yet opened an account in that town. Here is an opportunity for the Hardware dealer in Retlaw.

SCOLLARD—Kindly forward one of your Handy Ties, as offered in the Grain Growers' Guide for 25 cents; also send booklet.

Enquiries have been recently received from the following places. Is your town on the list?

Analysis of Thirty-Three Cent Paint

Toronto Hardware Merchant Secured Analysis of 33c Paint From Department of Inland Revenue, Canada—What Sample Contained—Reproductions of Advertisements and Correspondence With Department

ON page 33 of this issue appears a reproduction, in reduced size, of a letter received from the Department of Inland Revenue, Ottawa. The letter refers to an analysis of a sample of mixed paint, which had been submitted to the department with a request for an analysis. The analysis was made at request of Morris Phillips, a hardware merchant at 686 Bloor street, west, Toronto.

In the Toronto Daily Star of February 2, 1916, a portion of the full page advertisement of the T. Eaton Co., featured mixed paint at 33 cents per quart. A reproduction of the part of the advertisement referred to appears on the next page.

Two days later, Feb. 4, another advertisement appeared, and a portion of the advertisement featured paint, as shown in the reproduction on this page. This advertisement stated in part, "Don't judge the paint by the price. It contains all that a first-class paint should contain, and is carefully ground and blended, containing only pure lead, pure zinc, pure dry colors, and pure linseed oil."

On February 7, accompanied by an officer from the Inland Revenue Department, Mr. Phillips went to the store of the T. Eaton Co., Ltd., Toronto, and purchased two quarts of paint (inside white) which had been previously advertised in the Toronto Star of Feb. 4, and delivered same to H. R. Frankland, collector of Inland Revenue at Toronto. Mr. Frankland was requested to forward one can of paint to the Inland Revenue Department, at Ottawa, for analysis. Mr. Frankland forwarded one of the cans to Ottawa, together with the invoice, advertisement and a letter from Mr. Phillips, to the Department of Inland Revenue at Ottawa, with the request that the paint be analysed.

Mr. Phillips' letter follows:

Toronto, February 7th, 1916.

H. R. Frankland, Esq.,
Deputy Collector of Inland Revenue,
12 Toronto street, Toronto.

Dear Sir:

I desire to call your attention to an advertisement of the T. Eaton Company, Limited, published in the Toronto "Daily Star," of February 4th, 1916, dealing with the sale of a certain mixed paint which is offered at 33 cents a quart and described in the ad. as composed of only pure lead, pure zinc, pure dry colors and pure linseed oil. My belief is that it does not contain the above mentioned ingredients in the pure form and I therefore request you to have an analysis of it made for the purpose of determining the truth or falsity of the above referred to advertisement, because it is very unfair to the manufacturers of and dealers in paints and to the general public who are the purchasers and users, in the event of its turning out that the above described descrip-

Buy Paint at 33c a Quart If You Want to Share in the Greatest Value Ever Offered in Paint

Buy it for Indoor Painting Now, Buy it for Future Outside Painting

THIS PAINT WAS SOLD AT THIS FIGURE LAST YEAR, AND IT WAS CERTAINLY A GREAT BARGAIN, but it is doubly so this year, because the ingredients have advanced considerably. The only reason for the price being the same is that after the immense success which attended last year's efforts orders were immediately placed for a repetition of the event this year, and we thereby saved the advances on the materials. Don't judge the paint by the price. It contains all that a first-class paint should contain, and is carefully ground and blended, containing only pure lead, pure zinc, pure dry colors, and pure linseed oil. It is ready mixed and ready to apply. It will not crack, blister, or peel if directions are followed, and the list of colorings provide for woodwork in bedrooms, for shutters, verandahs, fences, in fact everything that will look better painted. BUY NOW WHILE THE COLOR LIST IS COMPLETE, FOR WE POSITIVELY CANNOT DUPLICATE THIS OFFERING AT THE SAME PRICE AFTER THE STOCK ON HAND IS GONE. DON'T DELAY—BUY SATURDAY. PHONE OR MAIL ORDERS WILL BE FILLED PROMPTLY. Here are the colors:

Golden yellow	Cream	Lead	Grey
Light buff	Warm drab		Lilac
Buff	Blue grey		Medium shutter green
Light green	Brown		Dark shutter green
Pea green	Russet		Outside and inside white
Pale green	Indian red		Made-in-Canada special, price, quart 33c

—Fourth Floor—

Reproduction of a portion of the Eaton advertisement which appeared in a Toronto daily paper on February 4, 1916.

tion of the said paint is incorrect and untrue.

Yours truly,
MORRIS PHILLIPS,
686 Bloor street, W.

According to a statement by H. R. Frankland, collector of Inland Revenue, he received on March 2 from the department at Ottawa, an analysis of the paint in question. On March 14, Mr. Frankland supplied Mr. Phillips with a copy of a letter which the former received from Ottawa. The letter reads as follows:

Deputy Minister's Office

Ottawa, March 10, 1916.

Mr. H. R. Frankland,
Collector Inland Revenue,
Toronto, Ontario.

Dear Mr. Frankland:

Re Paint sold by the T. Eaton Co., at Thirty-three Cents per Quart:

The T. Eaton Co. have written to the department, stating that the advertisement which accompanied the sale of their paint at thirty-three cents a quart had been prepared inadvertently.

However, the offence committed by this company does not come within the control of this department.

Section 38 of the Adulteration Act enacts that whenever **Dry White Lead** or **White Lead in Oil** is sold, with a label having the word "pure" or "genuine" printed on it, that the white lead must conform to the standard set in Schedule four of the Adulteration of Foods Act.

Apparently the paint sold by the T. Eaton Co. was labeled as follows: "Durable Mixed Paint, Inside White." This being the case, Section 38 would not apply, and the department has, therefore no power to interfere.

MORRIS PHILLIPS
Hardware Merchant, 686 Bloor St. W., Toronto

You might perhaps explain to Mr. Morris Phillips that his recourse is a civil one against the T. Eaton Co., and possibly also a criminal one, under the Criminal Code, for mis-representation and fraud.

However, he should consult his solicitor.

Yours very truly,
J. U. VINCENT,
Deputy Minister.

Up to this time Mr. Phillips had not received an analysis of the paint, and on March 14 he wrote the department at Ottawa as follows:

Toronto, March 14.

The Deputy Minister of Inland Revenue,
Ottawa, Ont.

Dear Sir:

Referring to the analysis of certain paint purchased by me from the T. Eaton Co., and supplied to your Collector of Inland Revenue here, Mr. Frankland, I would be obliged if you would kindly send me a copy of the analysis, as it appears in your letter to him of the 2nd instant.

I saw Mr. Frankland to-day and he read over the various items alleged to comprise the paint in question, but he thought it would be better for me to get a copy of this analysis direct from you.

Trusting that you will be able to let me have such copy of the analysis at an early date. I am,

Yours truly,
MORRIS PHILLIPS,
628 Bloor street, West.

No reply having been received by March 23, Mr. Phillips, despatched a telegram as follows:

J. U. Vincent,
Deputy Minister Inland Revenue,
Ottawa.

"Have not received reply to my letter March 14, asking for copy of analysis of paint submitted February 7. Please wire immediately reasons for delay."

MORRIS PHILLIPS.

Made-In-Canada Paint, 33c Quart

Guaranteed Paint for Interior or Exterior Use, in 20 Colors, and Inside and Outside White

LAST YEAR ABOUT THIS TIME, THIS OFFERING ATTRACTED SO MUCH ATTENTION and so much paint was sold that we immediately made arrangements to repeat it this season. The pure ingredients contained in this paint —lead, zinc, and dry colors—were purchased before the war had affected the raw material market, and the pure linseed oil was almost 100 per cent. lower than today. **There are four carloads of paint ready for this Made-in-Canada event, but unlike last year, we cannot promise to supply for the whole month at this price, but only as long as the lot lasts.**

If you have inside painting to do now or outside painting to do in the Spring, NOW is the time to buy the paint. It is a smoothly-ground, ready-mixed paint, has great covering capacities, flows easily from the brush, and will not crack, blister, or peel if applied according to directions. Colors:

Dark Shutter Green	Bottle Green.	Indian Red.
Golden Yellow.	Cream.	Turquoise Blue.
Light Buff.	Warm Drab.	Grey. Lilac.
Buff. Straw.	Lead.	Medium Shutter Green.
Light Green.	Blue Grey.	Outside and Inside
Pea Green. Pale Green.	Brown. Russet.	White.

Made-in-Canada. Special price, quart 33c

Pure White Lead, put up in 25 lb. irons, and guaranteed to be of extra high quality. Special, 25-lb. irons $2.45

VARNISHED TILE PAPERS, SINGLE ROLL, HALF-PRICE, 10c.

Papers that can be wiped off occasionally with a damp cloth are best for bathrooms, kitchens, pantries, clothes' closets, etc., and here is the opportunity to obtain the paper at half-price. An offering specially made to start business with a rush on Thursday. These papers are in good tile designs and colorings. Half price, single roll 10c

Reproduction of a portion of the Eaton advertisement which appeared in a Toronto daily paper on February 2, 1916.

A reply was received by Mr. Phillips on March 25. In this letter the assistant deputy minister and secretary has included some advice which was not asked for. The letter read as follows:

Ottawa, 24th March, 1916.
Mr. Morris Phillips,
686 Bloor street west,
Toronto, Ont.

Sir:—

I acknowledge receipt of your communication of the 14th, inst., and wire of yesterday's date, requesting to be furnished with a copy of analysis of the sample of paint which you forwarded as having purchased from the T. Eaton Company, Ltd., Toronto, Ont.

I may say in reply, that as the fee of $5 charged for work of this nature was not paid, the department does not feel justified in furnishing you with the information desired. Moreover, should the object in procuring same be to secure evidence whereby to enter an action against the alleged vendors it would without doubt fail of its purpose, since the legal formalities have not been complied with.

I remain, Sir,
Your obedient servant,
GEO. W. TAYLOR,
Asst. Deputy Minister and Secretary.

The reply to the foregoing was forwarded by Mr. Phillips through his solitor as follows:

Toronto, March 27th, 1916.
The Honourable,
The Minister of Inland Revenue,
Ottawa, Ont.

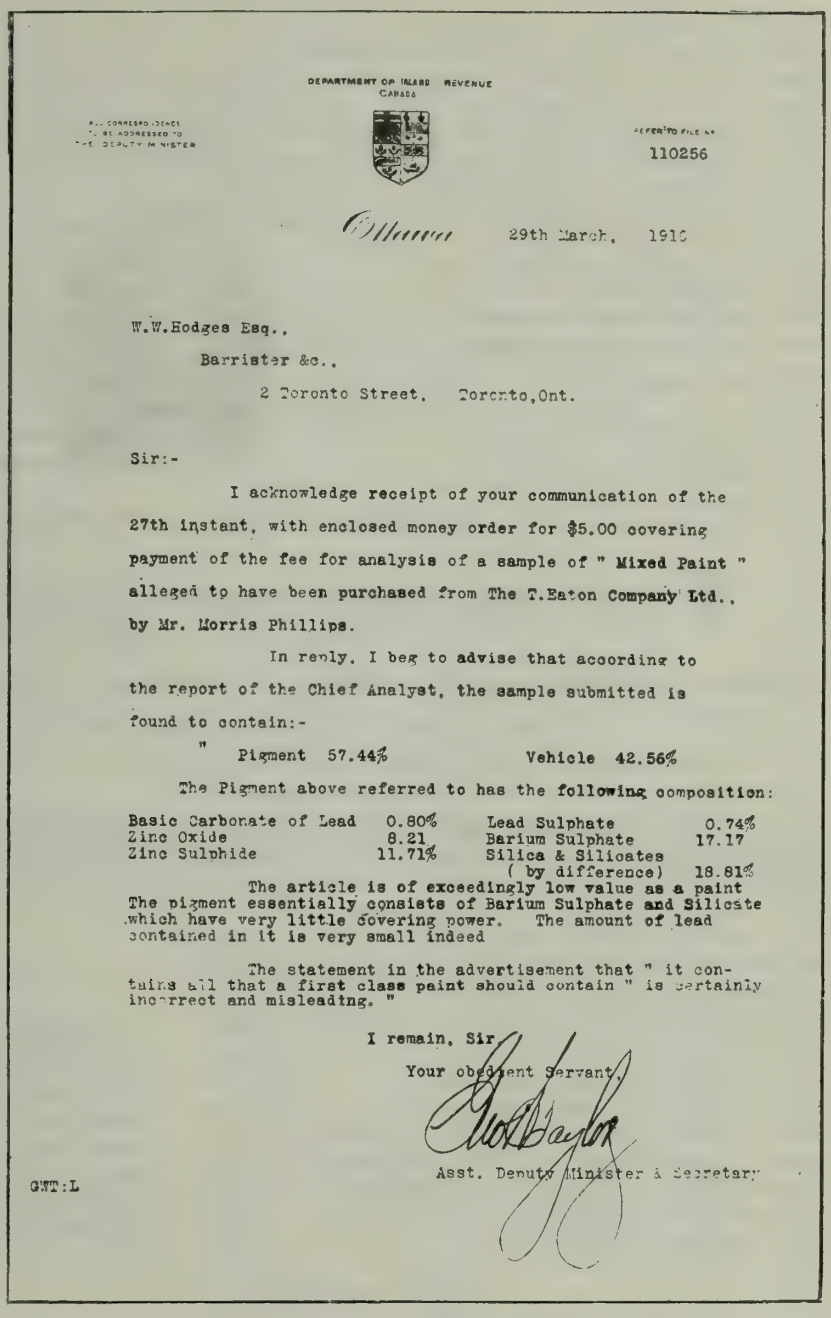
Dear Sir:

Referring to your Mr. Taylor's letter of the 24th inst., addressed to Mr. Phillips, of 686 Bloor street, west, about the analysis of certain paint which was submitted to your department some time ago, and in which letter Mr. Taylor says that the fee of $5 required for the work done in this matter had not been paid. I may say that this is the first intimation we received that a fee of $5 or a fee at all was required to be paid. However, in order to secure a copy of the analysis in question which was contained in a letter from Mr. Vincent to Mr. Frankland, dated the 2nd inst., I herewith enclose a Post Office order for $5—the amount named by Mr. Taylor as the fee for the work in question and will ask you, therefore, to kindly let me have a copy of the analysis as appeared in the Deputy's letter of the 2nd inst., to Mr. Frankland, here, by return mail if convenient.

As to what our object may be in procuring this information, I will not enter into any discussion of that just now.

Yours truly,
W. H. HODGES.

The reply to the foregoing letter, received by Mr. Hodges, and turned over to Mr. Phillips, is as follows:—



DEPARTMENT OF INLAND REVENUE
CANADA

All correspondence to be addressed to the Deputy Minister

Refer to File No. 110256

Ottawa, 29th March, 1916

W.W.Hodges Esq.,
Barrister &c.,
2 Toronto Street, Toronto,Ont.

Sir:-

I acknowledge receipt of your communication of the 27th instant, with enclosed money order for $5.00 covering payment of the fee for analysis of a sample of " Mixed Paint " alleged to have been purchased from The T.Eaton Company Ltd., by Mr. Morris Phillips.

In reply, I beg to advise that according to the report of the Chief Analyst, the sample submitted is found to contain:-

" Pigment 57.44% Vehicle 42.56%

The Pigment above referred to has the following composition:

Basic Carbonate of Lead	0.80%	Lead Sulphate	0.74%
Zinc Oxide	8.21	Barium Sulphate	17.17
Zinc Sulphide	11.71%	Silica & Silicates (by difference)	18.81%

The article is of exceedingly low value as a paint The pigment essentially consists of Barium Sulphate and Silicate which have very little covering power. The amount of lead contained in it is very small indeed

The statement in the advertisement that " it contains all that a first class paint should contain " is certainly incorrect and misleading. "

I remain, Sir,
Your obedient Servant,
Geo. Taylor
Asst. Deputy Minister & Secretary

GWT:L

Above is a reproduction, in reduced size, of the letter received from the Department of Inland Revenue, Canada. Illustration made especially for Hardware and Metal.

W. W. Hodges, Esq.,
Barrister, etc.,
2 Toronto Street, Toronto, Ont.

Sir,—I acknowledge receipt of your communication of the 27th instant, with enclosed money order for $5.00 covering payment of the fee for analysis of a sample of "Mixed Paint" alleged to have been purchased from The T. Eaton Company, Ltd., by Mr. Morris Phillips.

In reply, I beg to advise that, according to the report of the chief analyst, the sample submitted is found to contain:—

Pigment, 57.44 %; vehicle. 42.56%.

The pigment above referred to has the following composition:—

Basic carbonate of lead	0.80%
Zinc oxide	8.21
Zinc sulphide	11.71%
Lead sulphate	0.74%
Barium sulphate	17.17
Silica and silicates (by difference)	18.81%

The article is of exceedingly low value as a paint. The pigment essentially consists of barium sulphate and silicate, which have very little covering power. The amount of lead contained in it is very small indeed.

The statement in the advertisement that "it contains all that a first-class paint should contain" is certainly incorrect and misleading.

I remain, sir,

GEO. W. TAYLOR,
Asst. Deputy Minister and Secretary.

FOR ADVERTISERS

In the panel on this page appears Chap. 24, an Act to amend the criminal code, assented to June 12, 1914. Advertisers should always bear in mind the provisions of the Act, which states that it is unlawful to knowingly publish or cause to be published any advertisement, for promoting the sale of an article, containing any false statement or false representation which is likely to or intended to enhance the price or value of such article, or promote the sale thereof, etc., etc. Every merchant should carefully study the provisions of the Act.

Chap. 24—An. Act to amend the Criminal Code.

(Assented to 12th June, 1914)

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

1. *The Criminal Code, chapter* 146 *of the Revised Statutes,* 1906, *is amended by inserting the following section immediately after section* 406 *thereof:*

"406a. Every person who knowingly publishes or causes to be published any advertisement for either directly or indirectly promoting the sale or disposal of any real or personal movable or immovable property, or any interest therein, containing any false statement or false representation which is of a character likely to or is intended to enhance the priec or value of such property or any interest therein or to promote the sale or disposal thereof shall be liable upon summary conviction to a fine not exceeding two hundred dollars or to six months' imprisonment or to both fine and imprisonment."

Comments on Spring Number

Opinions of Readers Regarding the Annual Spring Number of Hardware and Metal—Extracts From Some of the Letters Received From Many Parts of Canada.

A. & H. WIDEMAN, MARKHAM, ONT.

FOLLOWING are extracts from a number of letters which Hardware and Metal has received regarding the Spring Number, issued on March 18:—

"You have certainly turned out an issue to be proud of. The information contained in the different articles on insurance, glass making and cutting, sale of commercial poisons and ammunition being alone well worth the yearly subscription to "Hardware and Metal." The market reports we find an absolute necessity at the present time owing to the continued change in prices, and in keeping close tab on the many changes we are enabled to take the profits to which we are entitled, irrespective of lower past costs and also escape quoting too low prices on goods not in stock. We certainly appreciate the services rendered by "Hardware and Metal."

Yours truly,
A. & H. WIDEMAN."

* * *

SUMNER COMPANY, MONCTON, N.B.

"We wish to say we consider your Spring Number of "Hardware and Metal" issued on the 18th of March is one of the best yet, and you certainly deserve great credit. "Hardware and Metal" has become a household word with every hardware store in Canada and our staff look forward to receiving it the first of each week. If it does not arrive on schedule time there is great disappointment. We wish you continued success in your efforts.

Yours truly,
SUMNER COMPANY."

* * *

I. W. BENNETT & SON, GANANOQUE, Ont.

"We duly received the Spring Number of Hardware and Metal and upon looking over same we think that this is really the best number that you have yet produced. We get a good deal of satisfaction out of your special editions, and hope that you will long continue this good work. Wishing you every success, we beg to remain,

Yours very truly,
I. W. BENNETT & SON."

THE HOBBS HARDWARE CO., LTD., LONDON.

"We have looked carefully through the annual Spring Number of "Hardware and Metal" and think it the best yet.

Yours very truly,
THE HOBBS HARDWARE CO., LTD.
C. A. Whitwam, vice-president."

* * *

THE FALLIS-FOOTE COMPANY, PORT ARTHUR.

"The first thing that occurred to the writer on looking at the number was the way the jobbers and manufacturers licked up the advertising space, thereby demonstrating clearly their opinion of its value as an advertising medium. From a retailer's point of view would say that it has a great deal of valuable information in it and altogether is a splendid number.

Yours truly,
THE FALLIS-FOOTE CO.
George F. Foote."

* * *

MILLS HARDWARE CO., HAMILTON

"Just a word to let you know I appreciate your 1916 Spring Number. Without a doubt this number surpasses all previous issues, which makes it the best yet.

"From a buyer's standpoint it is most valuable and will be saved. Space will not permit me to mention the many features of this number, but I do want to say that its educational value is worth dollars to the hardwareman who digests it.

Sincerely yours,
MILLS HARDWARE CO., LTD.,
Nelson Mills, Vice-President."

* * *

THE WINDSOR HARDWARE CO., WINDSOR.

"Our copy of the Spring Number of "Hardware and Metal" arrived on the 27th. We were rather disappointed at not getting our copy on the 20th, but after we had gone over it carefully we find we are more than repaid, as both the advertising and the interesting and instructive articles on the many phases of hardware business make it a publi-

cation that is a credit to its editor and is worthy of the most careful attention of every hardware dealer. Wishing you continued success and assuring you of our appreciation, we congratulate you on this successful issue.

Yours respectfully,
THE WINDSOR HARDWARE CO.
W. R. Billing."

* * *

H. OCCOMORE & CO, GUELPH.

"After a careful perusual of the annual Spring Number of "Hardware and Metal" we feel that we should congratulate you on what we think is the best number you have ever turned out. While the general make-up is of a high order, there are some articles that are of especial interest and value to the retail hardwareman. We value "Hardware and Metal" especially just now on account of the information it gives us re price changes. Wishing "Hardware and Metal" every success, we are

Yours very truly,
H. OCCOMORE."

* * *

S. L. ADOLPH, LISTOWEL, ONT.

"I wish to congratulate you on the excellent Spring Number of Hardware and Metal. I have looked it over carefully and I must say it is really a fine edition.

Yours truly,
S. L. ADOLPH."

* * *

R. HADDEN, PICTON, ONT.

"I wish to extend you my congratulations on the excellent Spring Number of "Hardware and Metal" issued March 18. It is full of good things and I think the best number you have ever issued. It is certainly a credit to your firm and Canada.

Yours truly,
R. HADDEN."

* * *

EDITOR, HARDWARE AGE, NEW YORK, N.Y.

"The Annual Spring Number of Hardware and Metal came to my desk this morning, and I cannot let the day pass without offering you my most hearty congratulations on this splendid number. I have been reading Canadian business magazines for many years, and this issue of Hardware and Metal contains more real meat than any issue of any Canadian publication I have ever seen. It is indeed a pleasure to congratulate you and the Canadian hardware trade on this accomplishment.

Cordially yours,
ROY F. SOULE."

* * *

THE NATIONAL RETAIL HARDWARE ASSOCIATION, OFFICE OF SECRETARY, ARGOS, IND.

"I have just gone through your splendid issue of March 18, and it certainly is a master in its line. I compliment you and your country on the push and enterprise that carried it through.

Yours very truly,
M. L. COREY,
Secretary."

* * *

J. H. CROW, WELLAND, ONT.

"I am in receipt of the Spring Number of "Hardware and Metal," which reflects great credit on the publishers. It is of much practical use to the hardware trade.

Yours truly,
J. H.CROW."

* * *

W. F. MACPHERSON, PRESCOTT, ONT.

"Your annual spring number contains so many good things that I feel it due you to record my appreciation of it. I always hang your annual within arm's reach of my desk, and can assure you that I will be obliged to consult this copy many times during the year. Your article "Laws that govern Retail Sales" alone makes this copy invaluable and must clear up many doubts in the retailer's mind. Other articles also rank equal in value and certainly make this one copy fully worth the year's subscription, and must surely meet with universal approval of your many readers.

Yours very truly,
W. F. MACPHERSON.

* * *

LASHBROOK HARDWARE CO., AYR, ONT.

The Spring Number of "Hardware and Metal" just received and in our opinion it is perfect.

Yours respectfully,
R. A. LASHBROOK."

THOMPSON & SUTHERLAND, LIMITED, NEW GLASGOW, N.S.

"Your Paper is always good, and you have certainly excelled yourselves in producing the Annual Spring Number.

Yours truly,
THOMPSON & SUTHERLAND, LIMITED.
F. Sutherland."

* * *

S. B. McCLUNG & CO., TRENTON, ONT.

"The Annual Spring Number of Hardware and Metal to hand. We expected something good, but it surpassed our expectations. We have studied it carefully, from cover to cover, and we are more than pleased with it. It covers the numerous lines of the hardware trade in a very interesting and instructive manner, and the information contained therein is worth much more than the subscription price. We feel that we would not like to run our business without the assistance of Hardware and Metal.

Yours truly,
S. B. McCLUNG & CO."

* * *

THE ROGERS HARDWARE CO., LTD., CHARLOTTETOWN, P.E.I.

"We have received the Annual Spring Number of Hardware and Metal issued on March 18, and we are very much pleased with it. We think it is the best edition of your journal that we ever received, and will profit very much by reading it.

Yours truly,
THE ROGERS HARDWARE CO., LTD.,
Geo. J. Rogers, President."

* * *

ADAMS & VANDUSEN, PICTON, ONT.

"I wish to compliment you on your annual Spring Number. My time now is fully occupied by military duties but I was much pleased to take this number home with me. It contains a large amount of valuable information and in every way is a credit to your firm.

Yours truly,
M. K. ADAMS, Lt.-Col.,
O. C. 155th Overseas Battalion, C.E.F.

* * *

SANDERSON PEARCY & CO., LTD., TORONTO

"We have carefully looked over the annual Spring Number and we find it very interesting and attractive. We really do not see how you could improve on it.

Yours very truly,
SANDERSON PEARCY & CO., LTD.,
Chas. H. Haldenby, vice-president and managing director."

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, APRIL 8, 1916 No. 15

IS IT FAIR COMPETITION?

ELSEWHERE in this issue appears a report of an analysis of a can of paint which was sold at 33 cents retail, by a Toronto department store. The newspaper advertisement which featured the paint stated that the paint contained all that a first-class paint should contain. The announcement naturally created considerable curiosity on the part of retail hardwaremen as to the composition of the paint offered by the department store. Retail hardwaremen in most cases are paying the manufacturers for first-class paint, nearly double the price charged at retail by the department store. Not only were the retailers curious, but they received many complaints from customers who, when asked 60c or 70c per quart for paint, referred to the fact that the department store was offering first-class paint at 33c per quart—a lower price than is usually charged by retail hardwaremen for ordinary barn paint.

Department stores and mail order houses are keen competitors of the smaller retail hardwaremen. Department stores frequently offer leaders, which are often sold at or below cost. It is not uncommon for the department stores to offer nationally known and trade-marked goods at prices as low as the retailer's cost. Competition of this kind is ruinous to the retailer, but the latter, as a rule, does not complain and makes the best of it. It is a different proposition, however, when the department store puts up an article under a private brand and features it as being as good as first-class goods, which term is ordinarily accepted as meaning the best on the market.

ADJUSTMENT OF PRICES

THE predictions of HARDWARE AND METAL during the past few weeks that paint would advance further, has proven correct. In last week's issue it was stated that the advance would go into effect almost immediately. This week's issue contains an announcement of the new and advanced quotations.

Conditions in the paint trade have been very much upset since the beginning of the war. The market for nearly all important ingredients entering into the manufacture of ready-mixed paints have been seriously affected and there have been advances in the cost of some materials which have overshadowed all previous price developments in the history of the trade. Lead has probably been the main factor in causing the last advance in the price of paints. The lead market has had several sensational upward movements since the first of the year.

The advance of lead following other developments has created a position where a reaction does not seem likely, in the near future. When this is considered in relation to the fact that at the last adjustment some months ago it was recognized that the increase made did not meet the actual market conditions then existing, it can be appreciated that the manufacturers are following the natural law of business.

A comparison of market prices prevailing at the outbreak of the war with those being faced in perhaps the best method of illustrating the developments. The following figures are from Montreal wholesale quotations: White lead in oil has advanced from $8.20 per cwt. to $13.80—ton basis. Turpentine has advanced from 67 cents to 77 cents per gal., barrel basis. Linseed oil has advanced from 61 cents and 64 cents to 95 cents and 98 cents per gallon for raw and boiled respectively—barrel basis. Zinc—in oil—quotations are difficult to gauge, but the fact that sheet zinc in casks has advanced from 6¾ cents per pound to 31 cents per pound is significant.

In addition there has been an enormous increase in the cost of certain chemicals and imported colors.

An analysis of these figures will prove that the advances made have been warranted. At the present market as indicated even higher prices for paints might be justified, but, from the standpoint of the manufacturers' returns, there is usually the benefit to be gained from the stocks of raw materials carried and the expert buyer can generally be relied upon to provide a measure of protection for his firm by insight into conditions and foresight as to developments.

While the increases referred to have placed paints on a normal level in relation to cost of materials, it is indicated that this is not yet the case with varnish, and the prospects are that there will shortly be an advance with regard to this product. Higher prices were put into effect some weeks ago in the United States and this fact, together with the cost of turpen-

tine and stains, etc., is forecast to affect the Canadian situation in the near future.

THE RETURNED SOLDIERS

THE time has come for Canada to make good the promises of the hysterical days of the war. Today her sons, some of them, return to seek their strange place in a new scheme of things.

It is more than money that these men work for. It is that understanding that is born of a generous sympathy steeped in a warm imagination that can conceive of the horrors they have been subjected to and that makes large allowance for the shortcomings that they bring with them into civil life. Is it humanly possible for a man who has stood the strain of months of trench warfare to be as other men, his looks of health notwithstanding? He has scraped his dearest friends off his clothes. He has withstood the shock of charges and the tense tumult of counter charge. He has for months lived under every hellish variety of modern death, perhaps he has been gassed, the tissue of his lungs burnt out, his brain scared and certain cells closed forever, and has perhaps gone through that most awful trial that modern artillery can bring to bear on a body of men "the preparation for the infantry attack," a concentrated inferno of noise and gas and blood and death that leaves its poor victims stunned and dazed, irresolute of limb and mind. Can these men be as other men in one year or two or three? Never. Always they will bear in their mind the cicatrice of it, long after kindly memory has enabled them very largely to forget the detail. Their wounds heal. Agony leaves their eyes. They do not return to Canada until sufficient time has elapsed to allow of this much. But their sick minds with its scar of sorrow and pain undreamt of here, that has destroyed their very thought impulses and dried up the very springs of action they bring home to Canada to heal in the blessed quiet of an uneventful life which they must largely slip through unobtrusively, all joy of action, all hope of initiative hopelessly lost to them.

And it is peculiarly the task of those who remain to recognize this fact and give to them in this condition which is often so dull and so elusive in its operation as to defy recognition even by its unhappy victims, a rich forbearance that will remember what they have gone through and that will condone even though it condemns.

They have borne all that alone. Now must they too bear all this alone. As never before in the history of the world are there men who crave the helping hand in word and thought and deed. Deeds are tangible and imply the securing of positions, the gift of goods and money. But more important is the Christ-like tolerance for the man who lacks and the inspiring presence of an enveloping kindliness that the passage of years will not erase and that will forever remain an inspiring vein of pure gold in the metal of our national life.

SITUATION STILL COMPLICATED

LINSEED oil manufacturers and paint men are in very uncertain frame of mind with respect to the factors that will govern the price of the oil in the near future. With the coming of the grass feeding season stock men will almost entirely give up the feeding of linseed oil cake. About May the manufacturers of oil cake each year find the local consumption during the spring and summer months is practically nil. As the oil cake enters largely into the determination of price of the linseed oil, it will be seen that the situation is still further complicated by the custom of giving up the feeding of oil cake to stock during the summer months. Manufacturers, however, will not make any statements as to the probable trend of the market in the future. They are frank in stating that they do not know.

While the oil cake situation may operate to send oil to a higher price, greater importations of flaxseed from the Argentine, may tend on the other hand to send the price of oil downward. With greater quantities of seed there may be a compensating relief from the restricted market for oil cake. At the present time there is an embargo on the shipment of oil cake to the old lands, so that the Canadian crushers must depend entirely on the local market. If this market is shut off through the cessation of feeding oil cake, it can readily be seen that the problem with respect to linseed oil will be a serious one.

In the United States the oil cake situation presents the same difficulties. Sales for this commodity have been reported at abnormally low prices in order to effect the sale. In the United States the season for the consumption of oil cake by stockmen is also drawing to a close.

Some of the Ontario manufacturers assert that they have experienced no difficulty in disposing of their oil cake up to the present time. What the future is likely to hold in store they are not prepared to hazard a guess. They have adopted a policy of watchful waiting, not knowing what the market situation of the near future may develop. There has been some indication that the western linseed oil manufacturers are experiencing a diffculty in disposing of their oil cake. One firm is known to have quoted prices in Ontario that are very near the Ontario prices for oil cake. When it is remembered that freight from the West to points in Ontario is somewhere in the neighborhood of eight dollars a ton it will be seen that some Western manufacturers are very anxious to dispose of their cake at almost any price.

Prices for flaxseed were quoted about four cents lower during the first part of the present week. But the oil cake situation tended to make the price of oil firm at recent quotations, even in the face of this decrease in price.

How to Conduct Auto Accessory Dept.

Stock Should be Proportionate to Local Demand—Some of the Best Selling Lines—How to Reach Car Owners—Value of Co-operation Between Manufacturer, Wholesaler and Retailer.

An authorized interview by Hardware and Metal representative with A. J. H pkins, manager auto accessory department, Canadian Fairbanks-Morse Co., Montreal, Que.

THE object of any dealer in handling any line of goods is undoubtedly to make the largest possible turnover on the smallest possible stock. To accomplish this end, and to properly illustrate the best means by which to accomplish this result in the handling of auto accessory lines in the hardware store, is the purpose of this article.

Two Important Features

To do this, two things are of importance: First, that the dealer stock a good range, but a small quantity of each line, or perhaps a mere catalogue inclusion of it in his stock, so that he will not, by the constant addition of new lines eventually acquire a stock entirely out of proportion to his needs. Second: He should establish a connection with a reliable supply house, so that he may have near at hand a large stock of goods that he can draw on without warning for any article in the accessory line which he may not wish to go to the expense of carrying.

Stock According to Demand

I do not mean that the dealer should restrict himself to a very narrow range of goods, but that he should carry a restricted quantity, and as fast as sales are made the stock can be replaced from the supply house stock. This could be made a "bread and butter line," by including all the essentials of a stock, in quantity proportionate to the local demand, and of which the price is not too high to be included in the stock. The higher-priced articles and a great quantity of the less-called for articles can be sold entirely from the catalogue as long as the supply house connections are adequate.

Spark-plugs, oil and wrenches may be mentioned among the list in this "bread and butter line," that is to be carried. These, and corresponding articles are always in great demand and some of them are used for a number of other purposes than motor use, so that they may be relied upon for a quick turnover. This question of quick service in supplying the lines from the wholesaler becomes a vital factor to the retail dealer. Next in importance as regular lines are such articles as lamp bulbs, batteries, switches, ignition and lighting wire, grease cups, Ford specialties, pumps, jacks, tire accessories and tires.

In some of the more widely used articles the manufacturers in common with many specialty manufacturers, now furnish very attractive display cases that are offered as premiums with purchases of a certain amount. These as every dealer knows, greatly assist sales of articles and the securing of them is made easy by the interested manufacturer and supply house.

Well Advertised Lines Sell

It is always well to buy the widely advertised lines. There is less possibility of price-cutting in any of these lines, for in most cases the selling prices of advertised accessories are fixed either by the jobbers or manufacturers, so that the hardware dealer knows when he buys the goods just how much he can make, and if he deals with a reputable house, he will be sure of reducing price-cutting to a minimum. The dealer, himself, must be the judge as to who will protect him and who will undersell him and must buy his goods accordingly to obviate this old evil. This year the question of price threatens to become a serious one, in view of rapidly advancing prices and great care should be taken in purchasing far enough in advance to ensure prompt delivery as well as sufficient quantities of the desired lines. Wholesale houses are stocking up heavily in anticipation of congestion at the factories, and also to protect their trade against rises in prices, as far as possible. Notwithstanding this it seems probable that there will be times when even wholesalers will be unable to procure delivery and this phase of the situation will require some study to overcome.

How to Reach Car Owner

For a hardware dealer who is just beginning to handle this line, there are several methods by which he may reach the interested car owner. Newspaper advertising, to be effective, must be continuous as the full effect of it can only be well reached after the initial campaign has been launched. In any event, the chief dependence must be placed upon the window, whether with or without the aid of newspaper advertising, and the setting aside of special space in a store with suitable show cases, where goods can be examined without being too crowded, a precaution of first importance. Personal letters to regular customers are of course very useful in the introduction of this line into the stock. Any special wrinkles to aid in dressing the window and to attract the buyers' attention are worthy of consideration.

Subject to Changes

Auto accessories are subject to changes of fashion, more than any line of mechanical supplies. On this account, great caution should be used in buying anything that is not a recognized staple. A great many lines will appeal to the retailer himself because of their great practical value, yet these lines may be found to be very poor sellers, so it is better to follow the trend of public taste, and not cater too much to the changes in fashions that are almost as variable as those in women's hats.

It is better to devote this energy to lines that are already half sold owing to extensive advertising, for their own momentum carries them through and the dealer's part becomes a perfunctory one. It is the popular line that swells and attracts the large volume of trade in accessories.

Tires may be sometimes handled to great advantage but even where trade in them is fairly lively it is inadvisable to carry a large supply in stock on account of the deterioration in rubber as well as heavy interest charges on what is always one of the most expensive parts of the accessory stock. In most cases standard lines can be obtained quickly from the tire jobbers and the rubber companies. Tire accessories of course sell very readily and represent a very much lower value. They includ portable vulcanizers repair outfits, inside patches and reliners, anti-skid chains are good stock directly in line with the hardware business.

Anti-Skid Chains

It is a peculiar fact in connection with the carrying or rather the non-carrying of auto accessories, that dealers who consider it a part of their business to carry articles of builders' hardware in all its various forms and makes will draw the line at carrying that same article in the automobile line. For instance, in the matter of anti-skid chains, a hardware dealer would consider his stock incomplete without the addition of cow chains, dog chains, log chains, etc., but the addition of an anti-skid chain appears to him only too often as revolutionary in character, although the fact

of the matter is there are more anti-skid chains in use than there are of any of the others mentioned.

A Profitable Line

Spark plugs are probably the most profitable of any line and are most in demand, although the individual cost of them is comparatively low. After a few staples the advertised lines are undoubtedly the easiest to sell and this rule is so general in its application that it may be safely applied to the whole line. Care should be taken to select those lines well advertised in trade papers and national magazines.

Initial Stock

A model initial stock would probably include the following lines which are given in the order of their importance: Spark plugs, high grade oil, dry batteries, portable vulcanizers, tire repair material, an assortment of lock-washers, nuts, screws and other small parts, particularly suitable to the automobile service.

There are, of course, a number of specialties for Ford cars along, which move very readily and most jobbers issue special catalogues covering lines of special material.

Manufacturers' Catalogues

Manufacturers for supply houses are beginning to adopt a broad policy in their course with retailers. A recent announcement to this effect reads:—"We propose to send our catalogue to every owner of a car, but in all cases where a dealer is giving us his support in a district, we shall refer orders to him. Our idea in sending these catalogues to individual car owners is for advertising purposes and to assist the dealer in building up a good volume of trade."

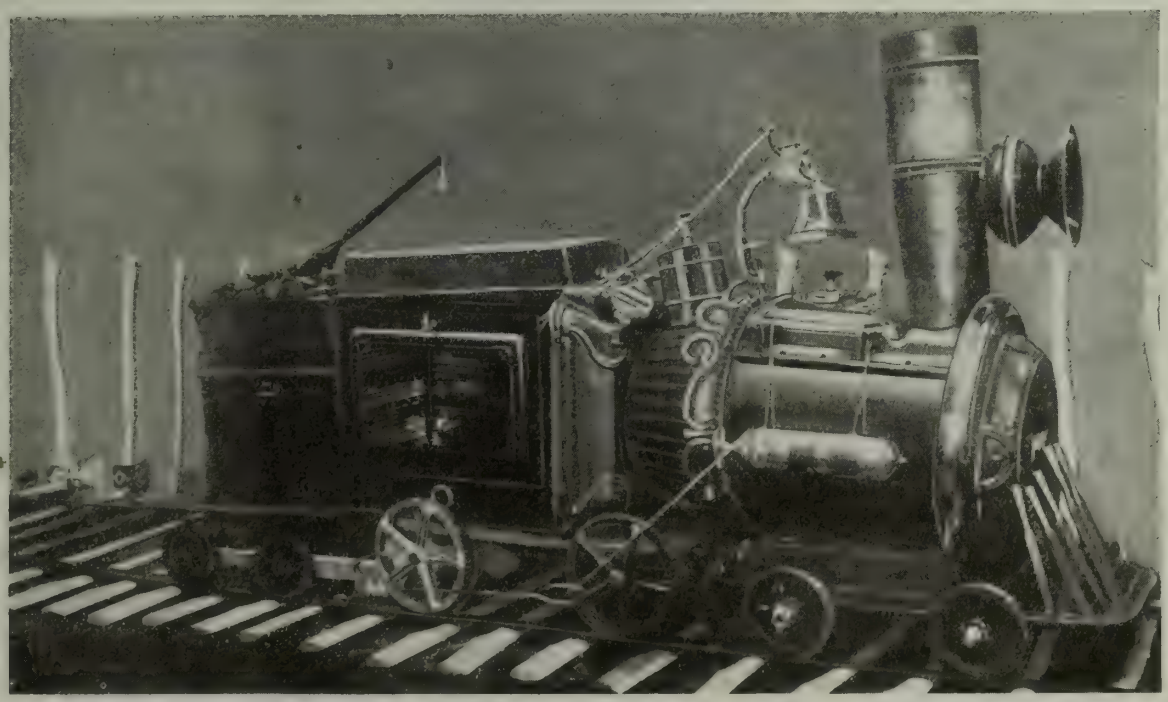
No better evidence of the manufacturers' desire to co-operate with the retailer could be desired than this willingness on their part to spend money to put the customer in touch with their representative, the local hardware dealer.

This method of co-operation particularly as applied to a line of such general use as this becomes a matter of prime importance. It is so important that to attain best results it becomes increasingly necessary for retailers to work together. Manufacturers and jobbers have already become convinced of the necessity of this and in many cases are working together along broad general lines to educate the people to the uses and advantages of their product. At the present moment several of the largest houses in Montreal are indulging in a co-operative plan of advertising, the expenses of which will be borne by all in the expectation that an increased general demand will occur throughout their territory. Possibly the best illustration of this, the manufacturer's genuine desire to co-operate with their retailers and bear the expense of making the sale for him is given in the system of reaching the prospect list with personal letters and follow-up literature. All of these things are done by the manufacturer and supply house in the dealer's name.

Co-operation In Business

Co-operation is becoming a very large factor in all lines of business, and the biggest men in it appreciate more thoroughly all the time that it is better to co-operate towards a harmonious end than to fight for one's own narrow viewpoint. In practically every case where this has occurred conditions have been so much improved that a very much larger increase in business occurs as a result of the cumulative effect of the combined advertising, whether that advertising be the direct offering of the line of goods to the public or the pushing of some idea by some of the members of the trade for the benefit of the whole.

The automobile line is the newest and greatest of all industries, and as such it possibly possesses the greatest vigor and expends its energy in a greater variety of ways, for the benefits of the trade at large. It is for this reason that it offers an unparalleled opportunity to a dealer who takes up the line to be carried along by this ever-increasing current of newly-made trade which will benefit him out of all proportion to his own individual efforts as a result of the combined efforts of so many centred on the one object.



Hardware locomotive arranged by Geo. H. Lemke, for Dunlop & Co., Pembroke, Ont. The ties are represented by axe handles. Barn door track was used for the rails. The boiler is represented by a coal stove. Other articles of hardware used in the construction of the locomotive are lawn mower wheels, cuspidor, raisin seeder, oil stove oven, bread box, bake pan, stove pokers, chisels, team bell, fire extinguisher, stove pipe. The display attracted a great deal of attention. Incidentally, many persons, after looking at the locomotive, were attracted by the displays of hardware in the other windows in the Dunlop store.

EVENTS IN THE TRADE

Business Changes

Carmangay, Alta.—W. P. Tesky, formerly of North Vancouver, B.C., has purchased the hardware business of Sherrin & Co., here.

Obituary

Toronto, Ont.—The death occurred here of Chas. Watkins, hardware merchant.

Toronto Office Opened

Armstrong, Whitworth of Canada, Ltd., Montreal, Que., have opened a sales office in the Dominion Bank Bldg., Toronto, in charge of J. L. Hynes, who is acting as representative for Toronto and district. This has been done with a view of giving individual attention to the business and extending the company's connection.

Honor Roll of Eight

The Saskatoon branch of the J. H. Ashdown Hardware Co., with the enlistment of J. Goble last week, now has an honor roll of eight.

New Paint Plant for Toronto

The Flint Varnish & Color Works, will establish a branch of their plant in Toronto on Perth avenue. The president of the company, W. W. Mountain, was in Toronto last week and completed the purchase of the site for their factory from the Chevrolet Motor Car Company. The site comprises three and one-half acres and the building located on the premises at the present time is 230 feet by 80 feet. This building was formerly occupied by the Dominion Carriage Company. The Canadian company has been capitalized with a capital of $250,000. It is the purpose of the company to erect additional buildings and altogether make the plant one of the most complete factories in the Dominion. An expenditure of approximately $100,000 will be made in buildings and other alterations to the premises. The company will manufacture paints and varnishes for the Canadian trade. It is expected the new plant will be ready for operation in about ninety days' time. The Toronto manager was expected to reach the city on Friday of this week.

Personal

E. E. Lyday, of the May Tag Co., Ltd., manufacturers of hand and power washing machines, Winnipeg, has returned to Winnipeg after an extensive trip through the United States.

J. D. Learment has recently been appointed representative of the Dominion Cartridge Company in the Maritime Provinces. Mr. Learment is well known to the hardware trade in this district as the former representative of the A. & M. Bell Company, of Halifax, and the connection established among the dealers of the lower province should stand him in good stead in his new position. For the present he will make his headquarters in Truro, N.S.

W. H. McConnell Appointed Sales Manager

An announcement has been made by A. Ramsay & Son Co., Montreal, to the effect that H. W. McConnell has been

W. H. McCONNELL
Appointed Sales Manager, A. Ramsay & Son Co., Montreal

appointed sales manager. This position has, until recently, been occupied by A. D. Brown, who is now manager. Mr. McConnell's connection with A. Ramsay & Son Co. extends over twelve years. He was four years in Ontario, three in Montreal, three in Western Canada, while for the past two years he has been engaged in special work, travelling from coast to coast. Mr. McConnell is, therefore, well known to the paint trade.

Two New Travellers

In the reorganization of the sales forces of A. Ramsay & Son, Montreal, two new travellers have been appointed in E. P. Marnell for the eastern townships, and J. R. Lefebvre for the northern district of Quebec province.

J. Pickles Factory Moved

J. Pickles, tent and awning manufacturer, formerly at 312 Hargrave street, Winnipeg, has moved his factory to 157 Portage avenue east, where he will have larger premises and increased facilities. Among the new lines to be manufactured will be a canvas bungalow, folding frame tents, and everything in camp furniture.

Millers Falls Star

Millers Falls Company, Millers Falls, Mass., makers of tools, have issued the first number of Millers Falls Star, a four-page publication, giving a few rays of light on the tool selling question. The Star is for distribution to the hardware trade and will be mailed on request.

Oil Plant at Regina

Progress is being made on the new million-dollar plant of the Imperial Oil Company now under construction at Regina, Sask. One large oil tank, 115 feet in diameter and 35 feet high, is just about completed, and there remains only the roof to put in place. A second large tank, over 90 feet in diameter, is about half completed; two twenty-five feet tanks are well under way, and the foundations are being laid for five additional tanks.

Simpson's at Regina

Regina, Sask.—"Within two weeks the Simpson building will be complete to its minutest detail, and by that time a large tonnage of goods will have been shelved; by the end of April a large stock should be here, and with all help hired, we should be in a position to open up for summer business in June," said one of the officials of the Robert Simpson Company last week.

Another announcement made by the official in question was that A. W. Pool, former city commissioner of Regina, would hold a high position in the executive end of the business in Regina. At the present time Mr. Pool is in Toronto studying the methods of the Robert Simpson Company, and will return here shortly to take up his duties.

Some time next month about thirty heads of departments will arrive from Toronto to take charge of their various sections, and the remainder of the help will be secured here if at all possible.

Factors in Increased Price of Brushes

Difficulty Experienced by Manufacturers in Getting Pigs' Bristles from China and Russia Through Freight Situation—Trouble in Mexico Has Curtailed Export of Fibres Used in Other Brushes.

BRUSHES of all kinds have increased considerably in price during the past two years. A number of forces have been at work to cause the upward trend in the prices. In the first place there has been an increased demand through the large number of brushes used to equip the soldiers in the field. Fibres which entered largely into the manufacture of certain classes of brushes came from Mexico. With the troublesome times in that country it has been difficult to get this raw material.

Then again there are the bristles used largely in the manufacture of paint brushes which have advanced in price. There has been an increase in the price of paint brushes from 10 to 25 per cent. to the retailer and jobber. The bristles used in these brushes are secured principally in China and Russia. The particular kind of hog on which they are found seems to thrive better in those countries. The hog in China and Russia approximates more nearly to the wild species. Bristles which grow on the back of the native hogs of Canada are neither stiff enough or long enough to be of service for the manufacture of paint brushes. In certain parts of the United States there are razor-back hogs whose fur along their upper ridge is suitable for this purpose. For the most part the bristles which are used in Canada come from China and Russia.

Submarines at Work

There has been considerable difficulty in getting the shipments through after they reach England. Even before they reach the old land they have to run the gauntlet of the submarine. Some cargoes of bristles have been sent to the bottom through these agencies, and this has caused a certain scarcity and increased the price to the manufacturer. Then again the higher freight rates and the increased cost of marine insurance have also been determining factors entering into an increased price.

There are four or five large manufacturers of brushes in Canada. These have been kept busy during recent months. An evidence of the trend of the brush industry is to be seen by the establishment recently in Canada of the first factory for the manufacture of brush-making machines. The woods used in the manufacture of these articles are birch, elm and maple. Here again there has been an increase in the price of lumber which has in turn affected the price of brushes.

Except for the factors already named there would seem to be no features on the horizon likely to loom up to cause a further increase in the price of brushes.

One of the other lines usually manufactured by brush makers is the ordinary broom—of sacred memory to all housewives. In this article there has been an increase in price to the retailers varying from 25 per cent. to 50 per cent. War conditions have not been at work in this case, but the elements have. Most of the broom corn consumed in Canada comes from the corn-growing sections of the United States—Illinois, Indiana, Kansas, Nebraska. (A special kind of corn is grown for this purpose.) Owing to the poor growing conditions in those States last year there was a shortage of the crop. This operated to send the price of the raw material upward.

PLANT TO MAKE LAMP GLOBES

The Dominion Glass Company at Redcliffe, Alberta, has recently made an addition to their plant for the manufacture of lamp globes. Fifteen men and boys are now employed in this department of the work and lamp glasses are being turned out at the rate of 2,000 a day. They hope in the near future to increase the output to 3,000 globes per day.

Jubilee Sporting Goods Flyer

Merrick-Anderson Co., Ltd., Winnipeg Man. have issued a spring and summer sporting goods catalogue consisting of 38 pages, attractively illustrated, and featuring a wide range of sporting goods such as are saleable through the hardware trade. Copies will be mailed on request.

Meakins Brushes

Meakins & Sons, Ltd., Hamilton, Ont., have issued a 137-page catalogue and price list of brushes, brooms and woodenware, baskets, mats, etc. The catalogue is attractively illustrated. A number of new lines recently added, are shown for the first time in the catalogue. Copies will be supplied on request.

Lambton County oil fields last year produced 7,505,478 gallons of crude petroleum. This is an increase in production of about 2,000 barrels over the year 1914. Oil has been produced in Lambton county continuously ever since the fall of 1862, over 50 years. With the increased price of crude oil it is expected that production will even increase. There is a great deal of territory in the county that has not yet been tested. The highest price paid for the crude oil in 1915 was $1.68 per barrel, while the lowest was $1.28 a barrel.

H. S. HOWLAND, SONS & CO., LTD., Wholesale Hardware Merchants.

Hardware and Metal, *Attention G. D. Davis, Editor.*

143-153 *University Avenue, Toronto.*

It gives me much pleasure in stating that without exception the annual Spring Number of Hardware and Metal is the brightest and best yet issued.

The lay-out of the advertising pages, the very interesting reading matter, the market reports, etc., make the general lay-out of the number one that the hardware trade of Canada may be proud of; because, it being a member of the hardware family, we are, for that reason justly proud of its continued improvement.

Of course, the success of a trade journal is really not in the number of advertisements it can secure between its covers (although that part is a necessary adjunct to its continuance), but rather to the extent it is read and studied by the trade.

The articles appearing in each issue dealing with stock-keeping, book-keeping, buying, etc., must, if studied properly, be of great value, and particularly so at the present time because of the market conditions. Too much space cannot be devoted to this most vital subject, buying; and personally, any information given your representatives is given, not as an advice to "stock up," but rather to "mark up," and so take advantage of the advancing market on the purchases. There is coming a time when we shall need all the reserve forces that we should be conserving now, and it cannot be too strongly impressed on the retail trade, the fundamental principle, that we are in business to make a success; and this can only be done by adding to the market prices a normal margin of profit.

The writer has been a constant reader of your paper for almost twenty-eight years, and has always been able to extract from its pages much valuable information.

Wishing you continued success, I remain,

Yours very sincerely,

T. B. WILLIAMSON.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

VICTOR AUTO LAMPS

The Victor Auto Parts Co., Cincinnati, Ohio, offers to the trade a number of automobile lamps.

No. 162 Swivel Electric Searchlight

The wind-shield electric spot light No. 180, is designed to be secured to the wind-shield by means of a bracket with a universal joint that allows the beam

No. 141 Swivel Gas Searchlight

of light to be instantly turned in any direction. The swivel joint is of such construction that the friction maintains the position of the light, but with sufficient flexibility that it may be easily moved in any direction by means of a handle at the back of the lamp. The makers claim that by the use of this lamp, side roads and passages may be inspected before turning the car, and serious accidents thus avoided. The lamp is fitted with 21 c.p. nitrogen bulb, and is said to throw 37,500 c. p. light.

No. 180, Wind-shield Electric Spotlight

No. 162 is a swivel electric searchlight for trucks, boats, etc. The diameter of the door is 11 inches. This lamp is supplied in all-black, black and brass, or black and nickel finish.

No. 141 is a swivel gas searchlight, with a 10-inch diameter door. This lamp is finished in all-black, black and brass or black and nickel finish.

A catalogue showing the complete range of lamps will be mailed on request.

MOSSBERG WHEEL PULLER

Frank Mossberg Co., Attleboro, Mass., have recently produced the Mossberg No. 660 wheel puller for Ford cars. It is claimed that the wheels on automobiles have a way of sticking fast to the axle on many occasions, and when fast work is desired a wheel puller is an absolute necessity. The makers of the Mossberg No. 660 wheel puller state that it overcomes several objections to the first designs of this device. It screws on to the hub threads with the very wrench that removes the hub cap and hub nut, and then a "grip clamp" is provided,

Mossberg Wheel Puller for Ford Cars

so that however hard the pull, the threads on the wheel hub cannot be stripped.

An ordinary wrench applied to the square head shaft of the puller thrusts this shaft directly against the end of the axle. Sometimes the wheel gives gracefully, but in many cases it is impossible to start it and the "660" is so made that a few taps of a hammer brings off the most obstinate wheel on a Ford car.

This hammering cannot harm the hub or puller itself, because the shaft bolt is free running in the puller head, being retained by a square nut inside.

A new catalogue featuring this and other tools may be secured by writing to the above-named company.

UTILITY SPRAYER

The Utility Knapsack compressed air sprayer is now offered to the trade by the Albert Lea Sprayer Co., Albert Lea, Minn.

The makers state that the utility is an extra high-pressure sprayer and is

The Utility Sprayer

especially suitable for throwing a fine spray on high trees, in poultry houses and other buildings, and it is equally effective for low vegetation of all kinds. It can be used for whitewash, cold-water paint and all kinds of spraying materials.

The pump which provides the air pressure of this sprayer is made with a cylinder of brass tubing with a ball check in the bottom. The pump can be easily removed by a few twists of the opening cap. This pump is used to secure the necessary air compression, and as the tank is tested at the factory to 95 lb. pressure to the square inch, it is claimed a very powerful spray can be secured without danger from the bursting of the tank.

The nozzle is made of brass with a valve stem made of a special hard brass with a soft-brass ground seat. This nozzle can be operated, it is claimed, at any distance from the user by merely adding a longer piece of ¼ in. gas pipe and a piece of wire. The valve contains a strainer which prevents clogging.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Market values of commodities sold and used by the hardware, plumbing and heating trades have never, within the memory of the oldest men in the trade, been of more interest than in the present period of constantly changing prices. Fluctuations on some lines are occurring almost daily. Reliable quotations on some lines are hard to obtain, while on others prices are withdrawn and are only quoted upon application and for immediate acceptance.

Although it is generally admitted that a reaction must come sooner or later, quotations on hardware and paint lines continue to soar. This week's market reports are in many respects a repetition of the reports of each week for many months past. There is the usual heavy weekly budget of price changes to report. Added to this there are complaints of shortages on many lines, with little or no relief in sight for at least some months to come. Under the present unprecedented conditions it would seem advisable for the retailer to "mark up" his goods, rather than to "stock up" too heavily.

Business continues in remarkably good volume from country districts, and city trade is showing steady improvement. There is a scarcity of help and in some of the larger firms the executive officers are now assisting in some of the work previously done by men who have enlisted. Advances in price have been recorded this week on wrought iron, black and galvanized pipe, bolts and nuts, Norway iron, reeled machinery steel, lead sheets, crow bars, copper rivets, machine screws, wrenches, cotton rope, sash cord, clay and rock picks, tinned wire, kraft paper, light brass hardware, snow shovels, screen doors, 22 calibre cartridges, some lines of rules and levels, scythes, harvest tools, hay knives, grass hooks, ready-mixed paints. Prices for binder twine have at the time of writing not been definitely announced, but it is understood that they will range from 1¼ to 2c per pound higher than last season's price. There have been no changes in the general tendencies and influences which have ruled in the market for iron and steel for many weeks past. Ingot metals are firm and stocks locally are light. All new prices, and predictions of further changes, are given in the market reports which follow.

MONTREAL

MONTREAL, April 6.—Conditions in the hardware situation are much as at last report, but it cannot be said that the evidence of steadying influences then referred to has been emphasised. Not only have there been further advances for certain lines of manufactured iron and steel, but in the more highly manufactured hardware readjustments to higher levels, as the result of the continued rising cost of raw materials, are still much in evidence. Dealers in metal products report that the shortage of stocks continues to become more and more apparent in relation to prospects for early deliveries from the mills, and that they can see nothing but continued advances until the situation rights itself. When that will be no one cares to predict, although it is unanimously admitted that a reaction must come sooner or later. Under such uncertain conditions—conditions as uncertain as the length of the war itself—little definite advice can be offered except to repeat a word of caution to the average dealer based upon the relationship of the present abnormally high prices and prospective consumption in his own territory.

Business continues in remarkably good volume from the country districts, where there appears to be a very good consumption of general staple lines required by the farmer. Under the influence of this outside demand, March made a showing which is a marked improvement over the same month a year ago and generally regarded as being up to normal. Even in the city there has been some improvement recently noted, although it has been confined to seasonable lines such as supplies and appliances for the spring clean-up campaign. Manufacturers of utensils report fair business with collections generally satisfactory.

The metals during the week have been comparatively steady and in the local market there are no changes of quotations to record. Tin is attracting attention on account of a recent upward movement in New York but thus far this has not had any influence in London and has therefore not been reflected in Canada; lead and copper are both firm.

Advances this week have been recorded on: Norway iron, reeled machinery steel, wrought iron pipe, certain gauges of lead sheets, nuts and bolts, crowbars, copper rivets machine screws, Stillson wrenches, cotton rope, sash cord, clay and rock picks and pick mattocks, oakum, tinned wire, files, Kraft paper, light brass hardware, snowshovels and scrap brass.

Advances are being predicted on: tin plates, boiler tubes, bright wire and hay wire, harvest tools, store trucks, and chain.

Tin in Uncertain.—Although the general basis of the tin market locally has held without change on the quotations of a week ago, there have been outside indications first of weakness and later of strength. Last news from New York was to the effect that there has been a rapid and sensational advance on the spot figure. However, as New York is not a direct influence in Montreal there was no immediate effect, although there was considerable speculation as to whether this was a purely American development, or whether there were influences at work which might be expected to affect London later. Montreal quotation: 52½-53c—unsteady.

Copper Firmer Again.—There is still no change in the local quotation for copper which represents the top of the upward movement of some weeks ago. However, where there was a slightly weaker feeling a week ago there is now a stronger tendency; the situation is much as when the advance movement stopped. New York reports that recent heavy buying has placed the producers in an independent position again with higher prices being asked on offers made. Reports that purchases have been made by the French government and that Great Britain is also coming into the market have been influences. Montreal quotations: 32-32½c—firmer.

Lead Continues Strong.—The position of lead continues very strong and the indications are for an advance rather than otherwise. A feature of the week has been the action of the American Trust

in making an increase of half a cent on prices quoted. However, as this has not resulted in any change on the outside market the Canadian situation is not directly affected. In New York the outside price is still nearly half a cent above the Trust quotation and the situation is very unsettled, owing to the fact that the advance of the big interest came as a distinct shock to the market, as it followed an announcement made a few days ago in which the Trust—in a declaration for policy—intimated that it would stand for moderate prices, in order not to interfere with the usual domestic consumption. Montreal quotation: 10¾-11c—tendency strong.

Spelter is Steady — On the slightly easier quotations for spelter given last week, the market has maintained strength and there has been some firming up of the outside influences with fractional advances in New York. In the States there has recently been free buying accompanying the purchases of copper. Montreal quotation: 22½-23c—steady.

Solder Continues Steady.—With generally unchanged but firm prices prevailing in the markets for raw materials there has been continued firmness in the solder situation, with a considerable breadth to the range of quotations. Difference in the proportions of metals used in solders for different purposes and sold at varying prices makes it difficult to give quotations. The following may be considered as nominal for Montreal: Commercial half-and-half 30½-31c; Strictly half-and-half 32½-33c.

Other Metals.—There are no changes in the local quotation for aluminum, antimony and sheet zinc. Antimony is quoted a half to one cent cheaper in New York, which would indicate an easier tendency to the local price of 48 cents; aluminum shows no new tendencies and is quoted nominally 68 cents; sheet zinc is steady at 31 cents for casks. and half a cent higher for part casks.

Iron and Steel Situation.—There can be said to be no change in the general tendencies and influences which have ruled in the market for manufactured iron and steel for many weeks. Manufacturers continue in the position of showing little or no interest in new busiess and the quotations for deliveries from stock continue to go to higher levels. When the top will be reached no one knows. Hardware and Metal can only repeat that the prices for goods delivered from stock will continue to advance so long as the mills are not in a position to make deliveries, but at the same time buyers should use a measure of caution in view of the already abnormally high prices prevailing. When the reaction in price will commence no one can venture to say, but opinion agrees that come it must sooner or later. This week there are still higher prices for pipe, Norway iron. machinery steel, chain, etc., with predictions of advances for boiler tubes, wire, bar iron and steel and some other lines.

Norway Iron.—There has been another advance made on the price for Norway iron. The quotation now given is $6.50 as compared with $6.25 which has recently prevailed.

Machinery Steel. — Another increase in the price of reeled machinery steel has resulted from the rising steel market. New quotations are $4.25 to $4.50 as compared with $4.00 recently prevailing.

Pipe Up Again.—Wrought iron pipe continues as one of the regular performers in the price changing performance. Still another advance is going into effect this week. The new Montreal and Eastern basis for the buttweld will be as follows:

Size.	Black	Galv.
¼ in. and ⅜ in.	$ 2 94	$ 5 25
½ in.	3 74	5 82
¾ in.	4 49	7 30
1 in.	6 63	10 80
1¼ in.	8 97	14 61
1½ in.	10 73	17 46
2 in.	14 43	23 50
2½ in.	22 82	37 15
3 in.	29 84	48 58
3½ in.	35 88	58 42
4 in.	42 51	69 22

Advances for tapweld about same proportion.

NEW DISCOUNTS ON BOLTS AND NUTS

Applying to Standard Lists.
Cancelling Previous Discount Sheets.

	%
Carriage Bolts ($1.00 list), ⅜ in. dia. and smaller	47½
Carriage Bolts ($1.00 list), 7-16 in. dia. and larger	32½

Whiffletree Bolts	30
Nuts, square	$2.50 off list
Nuts, hexagon	$2.50 off list

Terms: 2 per cent. off 30 days from date of shipment.

F.o.b. Montreal, Toronto, London, Hamilton.

Lead Sheets Adjusted.—A further adjustment in the quotations for lead sheets has recently been made, as the result of which 3½ pound sheets are now $12.25 per square foot, and 4 to 6 pounds are now $12.00; in the case of the former there is an advance of 45 cents and in the case of the latter a reduction of 25 cents on last prices.

Tin Plate Very Strong.—Despite the advances which have recently been made for tin plate, the indications from the present situation in the United States is that there is to be an acute shortage of supplies in the near future; some of the mills are closing down on account of the shortage of steel. The outlook, therefore, is for still higher quotations in Canada.

Boiler Tubes Strong.—On account of the further increase in the prices for wrought iron pipe, going into effect this week, an advance on boiler tubes may be expected in the near future.

Lead Pipe Strong.—With the continued strength of the lead situation, lead pipe is even firmer than at last report and further advances may be made. The quotation is $13.50 for lead pipe with $14.50 for lead waste pipe.

Situation in Sheets.—There has been no change in the situation in sheets since last report, but there are continued indications of a shortage of certain sizes and on both black and galvanized higher prices are to be looked for. The exhaustion of stocks continues with little improvement as to deliveries.

In Hardware Lines. — It cannot be said that the tendency towards quieter conditions in the general hardware lines in relation to prices has been continued. changes in volume are about as at last report but are not so heavy as some weeks ago and there still appears to be evidence that while the present conditions continue constant readjustment of the highly manufactured products of the different metals may be expected.

New Discounts for Nuts and Bolts.—Still a further advance on nuts and bolts is covered by a new list of discounts issued this week by the mills. The change is about 5 per cent. in the allowances made to the trade. Discounts as announced in a panel on this page.

In the Montreal trade there is an additional allowance of 5 per cent. on carriage, machine, and sleigh shoe bolts and coach and lag screws.

Crowbars are Higher. — The rising markets for raw materials are responsible for a further advance on the quotation for crowbars. Prices to the trade are now 4 to 4½ cents as compared with 3¼ to 3½ cents.

Copper Rivets Again.—In the march of prices copper rivets have been with the most consistent of the performers. Again there is an increase this week. The rivets, with or without usual proportion of burrs, are now 30 per cent. add list and burrs are add 50 per cent.; former additions were 15 per cent. and 30 per cent. respectively. Before theere were discounts off list of 35 and 12½ per sent. and 30 per cent. respectively.

Machine Screws Higher.—In addition to the advance on wood screws referred to last week, there has been an increase on machine screws. The discount on round and at head iron has been reduced to 27½ per cent. and on the fillisted head to 10 per cent.; for the brass the net list prevails for the round, flatt and fillister heads.

Wrenches Up Again.—There has been still another advance on Stillson wrenches. The discount on the wrenches has been brought down to 67½ per cent and on parts the allowance is the same.

Cotton Rope Advances.—Another advance on one cent has been announced on cotton rope. The quotations now are: coton rope 3-16 inch 27 cents; ¼ inch and larger 26 cents.

Sash Cord Up.—With the advance on cotton rope there has been an increase

on sash cord, new prices being as follows: Number 6, 33½ cents; Number 7, 32½ cents and Numbers 8, 9, 10 and 12—32 cents.

Picks Are Higher.—New prices have gone into effect this week for clay and rock picks but there appears to be some spread in the quotations as between different wholesalers. About the following range is indicated:

	Rock		Clay	
5 to 6 lbs. ..	5 50		5 00	5 30
6 to 7 lbs. ..	5 75	6 25	5 25	5 65
7 to 8 lbs ..	6 00	6 55	5 50	5 95
8 lbs.	6 50	6 75	6 00	6 10
9 lbs.	7 00		6 50	

Oakum Up Again.—Following the advance on U. S. Navy oakum, announced last week, there has been another half cent increase, the present quotation being 10½ cents. At the same time there has been an increase of 1 cent on plumbers (spun) from 6 cents to 7 cents.

Babbit Metal.—Quotations for Langwell's babbitt metal have been advanced to the following basis: Extra 15 cents; No. 1 14 cents: No. 2 12½ cents; No. 3, 11½ cents.

Wire to go Higher. — A forecast is made on information from an authoritative source that there will shortly be higher prices for bright steel wire, including hay wire.

Harvest Tools on Advance. — It is learned in the trade that there are definite indications of an early advance on harvest tols. This would appear to be a natural course in view of the higher cost for raw materials required for the manufacture of these lines.

Advance on Tinned Wire. — Further advances on tinned wire have resulted in a general readjustment. On the sizes from 8 to 16 gauge the advance is comparatively trifling, but from 19 to 27 gauge there are increases of about 20 per cent.

Pick Mattocks.—In the readjustment of prices affecting picks, pick mattocks have also been advanced. The new price is given at $5.50.

Files are Higher.—General advances on files are being made. The discount on Globe is now 65 and 10 per cent. for both files and rasps; (rasps formerly enjoyed an extra 5 per cent.) On Black Diamond the new discount is 60 per cent. Other brands will be similarly affected in the readjustments.

Kraft Paper Up Again. — There has been an important advance made on Kraft paper, the price being increased to 8 cents per pound as compared with 6 cents formerly.

Butterfield Goods. — In the readjustment of prices on Butterfield goods to which reference has been made, one of the important changes affects pipe stocks and dies which are now 70 and 10 per cent.

Brass Goods. — On such brass hardware as door pulls, buttons, hooks, etc., there has recently been a further advance of about 10 per cent. This is one of several increases made in the price of these goods.

Trucks More Expensive.—Dealers announce that they have received advice of an important advance on the price of store trucks. As yet adjustments have not been made in the trade.

Chain is Strong.—There have recently been further advances on chain by the manufacturers. Higher prices to the trade may be looked for, but as yet dealers do not appear to have made a general readjustment.

Snowshovels.—Following the general advance on shovels there has been an increase also on steel snow shovels. These shovels are sold net list and the increase thereon is about 10 per cent.

Old Materials.—On the list of old materials there are changes this week affecting brass. The offer for heavy brass has advanced from 15½ cents to 16 cents and for the light from 11¼ to 11¾ cents.

TORONTO

TORONTO, Ont., April 5.—The bright seasonable weather has stimulated trade, and has been much welcomed by retailers. Jobbers also report an increased volume of business and with a better movement in summer lines. Navigation on the lakes is practically open, which will help to relieve the freight congestion, which is causing considerable delay to shipments and inconvenience to merchants. An index in trade, particularly during the last six or seven months, is furnished by the Customs returns for the port of Toronto. The figures for the fiscal year, which ended March 31, show an increase of almost two million dollars over the greatest previous year in the history of the port. The principal increases have been made since last September, while March showed the largest increase of any month. Manufacturers are becoming much concerned over the shortage of labor, which is gradually becoming more serious and threatens to restrict production. Manufacturers are also experiencing serious difficulty in obtaining supplies of raw materials in sufficient quantities, with the result that a scarcity in many lines of hardware is feared.

NEW PRICES ON WROUGHT

Montreal and Eastern List.

More Price Changes.—The upward tendency in prices continues, and a number of important changes have been made this week. The possibility of any recession in prices appear at the present time to be remote. Prices of all raw materials are still advancing, and most manufacturers having used up their stock of cheaper materials, have now to pay higher prices. This in turn increases prices of finished products, and the tendency will be for the prices to keep at a high level until the higher-priced raw materials have been used up. A drop in the prices of raw materials thus would not necessarily be followed by an immediate decline in price of hardware. Indications thus point to a continuation of high prices for some time to come.

The principal lines affected this week include wrought iron pipe, harvest tools, bolts and rivets, rim fire cartridges, including .22 short and long, black and smokeless, scythes and hay knives, copper rivets and burrs, sash cord, cotton rope, screen doors and windows, saddlery, hardware, files, oakum, grass hooks, harvest tools. Higher prices on a number of lines may be looked for in the near future. It would not be a surprise to see another advance in cut nails, while wire nails may also advance again. Reports from the States intimate an advance in cut nails there, which may be followed by a similar movement in this market. A further advance in bright wire goods is also anticipated, while stove and tire bolts may also advance again. The ready roofing situation shows no improvement, and higher prices are looked for any time.

Iron and Steel Situation.—The market continues strong, and prices are still moving upward. The opinion is held in some circles that the high point for prices has probably been reached, or nearly so, but at the same time a recession in quotations is not expected for a long time to come. The fact that the steel mills have all the business they can take care of this year will have a tendency to steady the market and prevent any marked decline. The steel companies are making strenuous efforts to develop their export business, and considerable success in this direction is an-

ticipated. The mills continue to be actively engaged in the production of steel for shells, the demand still being very insistent. The export business is developing, and there has recently been a noticeable improvement in the domestic demand.

Metal Markets.—The most interesting feature to note in the metal markets this week is another advance in lead, otherwise prices are at about the same level as last week. The copper market is stronger, due to a large buying movement, which may result in higher prices. Tin is also strong, and may possibly advance. The lead market is strong and higher after a period of comparative dullness. The spelter market is more active, and the outlook has improved. The antimony and aluminum markets are strong, with nominal quotations. Solders are unchanged, but very firm, and higher prices are very probable.

Copper Strong.—An active demand for copper has developed into strong buying movement, and there is every possibility of higher prices. The consumption of copper in Europe is said to be far in advance of the present shipping facilities, and an urgent need exists for this metal. There is also an abnormal demand for spot copper in the States, but very little is available. The local market is strong and quotations are unchanged and nominal at 30½c per pound.

Tin Firm.—The market is easier in London, but firm and unchanged at New York. The outstanding features in the tin situation continue to the heavy consumption and difficulty of getting supplies. The New York market is still being affected by the delay attending the granting of licenses permitting exports of metal from England. The situation is rather tight, and higher prices may be looked for. Quotations are unchanged and nominal at 53c per pound.

Spelter Firmer.—The market is more active and firmer. It is possible that the buying movement, which has already started in copper, may extend to spelter, as both metals are used together at the brass mills. Production has been greatly increased, and is doubtful if prices can go much higher unless some extraordinary demand develops. The market is firm at 22c per pound.

Lead Higher.—The "Trust" has again advanced the price of lead, and is quoting 7.50c New York. The outside market is higher still, the price ranging from 7.87c to 8.12c. The market is very strong, and the demand continues heavy with a scarcity of spot metal. Lead has advanced ½c, and is now quoted at 11c per pound.

Antimony.—The market is strong, and the demand is heavy, but supplies are scarce. Quotations are nominal and unchanged at 48c per pound.

Aluminum.—The situation is unchanged and the market is strong at 68c per pound.

Solders.—Prices are very firm, and an advance is not unlikely owing to the continued strength in the tin and lead markets. Guaranteed is quoted at 31½c and strictly at 29c per pound.

Galvanized Sheets Firm.—There is no change in the general situation; the market is very firm, and higher prices are very likely. The uncertainties of the spelter market and high prices are not attractive to the galvanizers, who are also confronted with increasing prices on black sheets. The demand for black sheets in the primary market is on the increase, and many mills are well sold ahead; in some cases orders now on the books run well into the fourth quarter. prices of black sheets are very firm and unchanged, and the market is strong.

Cold Rolled Shafting.—Another advance has been made in cold rolled shafting, which is now quoted at list plus 20 per cent. f.o.b. warehouse.

Electric Welded Chain Up.—Makers of electric welded chain have again raised their prices, which are now as follows:—B.B. coil chain, 3-16 in., $11.70; ¼ in., $8.40; 5-16 in., $7.40; ⅜ in., 7-16 in., ½ in., ⅝ in., and ¾ in. are all quoted at $6.35 per 100 pounds. All prices are nominal owing to the unsettled conditions in the market, due to the steady increase in cost of raw materials.

Wrought Iron Pipe Up Again.—Makers of wrought iron pipe have announced another advance in prices, due to the conditions in the raw material market. Prices in the States recently advanced, so a change in this market was looked for. The advance is two points on all sizes of black pipe and six points on ¼ in. and ⅜ in. galvanized, but only three points on all the other sizes of galvanized pipe. The new prices are given in the panel on page 45.

Bolts and Nuts Advance.—Makers of bolts and nuts have made another advance of approximately 10 per cent. Prices of these goods have been rising steadily for some months, and there is no sign when the top will be reached. The new discounts are given in the panel on page 44.

Brushes Advance.—The brush situation in all lines shows no improvement and the difficulty of obtaining raw materials, principally bristle, is causing much anxiety to manufacturers. Not only is there a serious shortage of bristle, but freight rates are abnormally high, and the shortage of tonnage is also affecting the situation. Weighted brushes have advanced 5 per cent. on account of the increase in cost of fibre and metal. The high price of fibre and broom corn has affected practically all lines of household brushes, which have advanced 5 per cent. Brush manufacturers will not make any long-term contracts owing to the uncertain outlook. The shortage of fine grades of bristle, particularly camel hair, has become acute. Weighted brushes are now quoted as follows:—15 lbs., $15.36; 20 lbs., $17.62, and 25 lbs., $21.26 per dozen.

Harvest Tools Higher.—Harvest tools have advanced about 5 per cent., the new discounts being 40 and 5 per cent. on "Samson" tools and 40-5- per cent. on other makers' lines.

Grass Hooks Up.—Prices on grass hooks have advanced 40c a dozen on Canadian and 60c on English hooks. Canadian No. 2 are now $2; No. 3, $2.10; No. 4, $2.20, and No. 5, $2.40 per dozen.

Scythes Advance.—Makers of scythes and hay knives have advanced their prices 50c per dozen.

Copper Rivets, New Discount.—A new price has been made on copper rivets and burrs. Copper rivets, with the usual proportion of burrs, are now list plus 30 per cent., and burrs only list plus 50 per cent.

Screen Doors and Windows Up.—Prices of screen doors and windows have advanced 5 per cent., making an advance of 10 per cent. since the first of the year.

Saddlery Hardware Advance.—Makers of saddlery hardware, including bits, snaps, etc., have advised jobbers of an advance, which will go into effect immediately.

Sash Cord Higher.—New prices on sash cord have been issued, and are as follows:—No. 6, 33½c; No. 7, 32½c, and No. 8 and up 32c per pound.

Cotton Rope Advance.—Cotton rope has advanced 2c per pound, and the following new prices are now in effect:—⅛ in., 31½c; 5-32 in., 30½c; 3-16 in., 28c, and ¼ in. and larger, 27c per pound.

Rim Fire Cartridges.—Makers of rim fire cartridges have advised the jobbers of the following advances: Lesmok and black powder, .22 short, .22 short hollow point, .22 long, and .22 long hollow point, discount is now 30 per cent. Smokeless .22 short and .22 short hollow point, discount is now 40 per cent. Smokeless .22 long and .22 long hollow point, discount is now 30 per cent.

Woodenware Situation.—It is expected that manufacturers of wooden ware will be forced to advance their prices. Lumber and all other raw materials, such as tin, zinc and copper wire, are going up, and the situation generally is uncertain. Business is good in many lines, but buying has been hand-to-mouth. Consumers now, however, are more inclined to buy ahead, and lay in stocks in anticipation of a shortage.

Oakum Advances.—All lines of oakum have taken an advance, ranging from ½c to 1¼c per pound, according to grade. The following are the new prices:—Best, American, 17¼c; U. S. Navy, American, 16½c; new hemp, English, 12½c; U. S. Navy, English, 10½c, and plumbers, 7c per pound. The market is very strong, both here and in the States, while English oakums are becoming more difficult to obtain.

Wire Nails.—The market continues very strong and higher prices on wire nails are looked for. There is a great scarcity of wire rods, and deliveries are getting further behind. Wire nails are unchanged at $3.40 per keg base.

Cut Nails.—Cut nails are now being quoted at $3.20 per keg base, but all indications point to higher prices in the near future.

Kitchen Utensils.—The market is very firm at the sharp advance announced last week. The demand continues good for most lines of ware. Jobbers are beginning to ship summer lines in good volume, the seasonable weather having stimulated business.

Stoves.—There is quite a brisk demand for gas ranges and oil stoves; coal

ranges are also moving out in good volume.

Advances Expected.—In addition to the lines already mentioned, the condition in the market is such that other advances may be expected. Among the lines most likely to be affected are bright wire goods, stove bolts and tire bolts.

Files Advance.—A change in discounts has been made by makers of the following brands of files: Great Western, Kearney & Foot, J. Barton Smith, Eagle, McClellan, Globe and Globe. The new discount is 63 and 10 per cent., whereas the old discount was 72½ per cent.

Ready Roofing.—There is no improvement in the situation to report, and higher prices are expected any time. Conditions in the rag market are acute, and there is no relief in sight. Many lines of building papers will be affected.

Binder Twine.—The new prices for binder twine have been delayed owing to the unsettled conditions in the market. It is hoped, however, that the new schedule will be available for publication next week.

LONDON

LONDON, Ont. April 6.—The spring-like weather of the past week has stimulated the demand for spring hardware lines. The outlook is exceedingly bright and all retailers are decidedly optimistic regarding prospects for business during the next three months.

There have been many price changes this week as usual.

Price Changes.—Hay knives have advanced 50c per dozen. Harvest tools have also advanced and the new discount is 40-5—5 per cent. Scythes have advanced 50c dozen. Some lines of rules and levels have advanced 10 per cent. A new price has been issued on one line of ammunition in the 22 cal. size.

Bolts have advanced 10 per cent. and the new discounts are shown elsewhere in this issue.

Iron pipe has also advanced and the new prices are shown in a panel elsewhere in this issue.

Padlocks have advanced 20 per cent.

Spades and shovels have advanced 10 per cent and new discounts are shown in current quotations. Net prices are now as follows:—1st, $10 doz.; 2 nds, $9.58 per doz.; 4ths, $8.30 doz.; hollow back socket, $7.33 doz.

Sash cord has advanced 1 cent per pound and is now quoted as follows:—No. 6. 33½c lb.; No. 7, 32½c lb.; No's. 8, 9,-10, 12, 32c lb.

Paint Higher. — Ready mixed paints have advanced 20 cents per gallon and are now generally quoted at $2.50 per gallon in quart cans.

Screen Doors Higher. — Screen doors and windows have advanced 5 per cent. Cheap grained screen doors are now quoted at $9.60 doz. net.

Picks Higher.—Clay picks have advanced and new prices follow:—5-6, $5 doz.; 6-7, $5.50 doz.; mattocks, $5.75 doz.

Snow shovels have advanced from 10-20 per cent.

Harvest Tools Higher.—Harvest tools have advanced and the discount, form-

WEEKLY PAINT DEPARTMENT

Paint Should Be Well Rubbed In

Three Coats Necessary to make It Weather Well—More Complaints From Improperly Stirred Paint Than Any Other Cause—Dealer Should Help Manufacturer to Educate Public on Paint Problems.

Written for Hardware and Metal by F. J. Penberthy, manager of Lowe Brothers, Ltd., Toronto.

This is the third and concluding article written by Mr. Penberthy. The first article dealt with the "Preparation of the Painting Surface," and the second with the "Preparing of Primers and Old Surfaces."

APPLICATION is also an important factor. A coat of ordinary paint upon a non-absorbent surface is transformed into a film of about 1-500 inch in thickness. Two coats will naturally transform into a film of double this thickness, and yet two coats do not form a film of sufficient thickness to weather well. I advise three coatings as a minimum in each painting.

A good stout paint well rubbed on to and into a surface in fit condition to receive it will wear much better than the same paint thinned out with linseed oil or other material for the purpose of either saving in the cost of material or of lessening its resistance to the stroke of the brush, that is to say, making it easier to spread. Experienced painters know this and yet it is impossible to force men to brush out a stout paint with brushes of the large sizes generally supplied them.

Failure to Stir Causes Most Complaints

The manufacturer receives more complaints on acount of paints not being properly stirred than all the others put together. An amusing incident happened to one manufacturer a short time ago. A clerk in charge of the paint department of the dealer's store, called up the manufacturer over the telephone and during the conversation mentioned that he had had a severe complaint on a certain paint not being the proper color. With the greatest pride, he told the manufacturer that he had fixed it alright, that he added a little boiled linseed oil and the color matched the color card perfectly. It was not the linseed oil that made the color match perfectly, the color was there beforehand. But it was necessary for the clerk to stir the linseed oil into the paint and by stirring brought the color to the proper shade.

The dealer can assist the manufacturer in educating the public how properly to stir paint. It is necessary that paint should be properly stirred in order to produce the results expected of it, that is to preserve and to beautify.

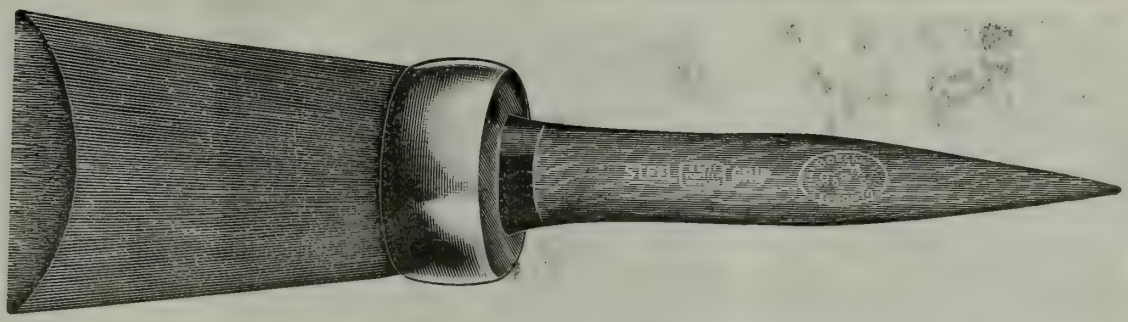
In order to beautify an even coat of the proper shade paint should be applied to the surface and hide all its defects. Linseed oil is used as a vehicle to carry these pigment particles, or hiding properties, over the surface, and therefore in order to do the work intended for this paint each brushful should contain exactly the amount of pigment particles required for the amount of oil contained in the brush.

When the can is sealed in the factory the liquid portion contains the exact number of pigment particles to do the work required. If the paint stands on the dealer's shelves for several months there is liable to be a settling of the heavy pigment particles, and in order to bring the finished paint to its proper consistency, so that there will be an even distribution of pigment particles

A specimen of badly weathered lumber. Dry rot might cause paint applied to this sort of surface to peel off. A moderately weathered wooden surface is naturally in better condition to receive paint than an unseasoned one, providing it is properly primed before finishing coat is applied.

Running, as shown in this illustration, is caused through stout paints being excessively thinned with oil in order to save labor and expense. Running depends to a certain extent also upon the drier used.

A section of weather boarding taken from an old house. A surface in this condition must be wire-brushed or burnt off with a blow-torch before it is in fit condition to receive paint. This is about the condition of the lumber used in building the addition referred to elsewhere. It was claimed that the paint put on a year before was faulty.



NO BRISTLE SHEDDING HERE

Bristle Shedding Brushes are one of the greatest detriments to doing good work quickly.

The compressed nickeled steel ferrules on all

"STEEL GRIP" PAINT AND VARNISH BRUSHES

positively prevent the Bristles coming out.
Only the best materials enter into their construction.
Handles are of the common-sense shape which will not cramp the hand.
Properly balanced and up-to-date designs.

PRACTICAL PAINTERS PREFER BOECKH'S

MANUFACTURED BY **THE BOECKH BROS. COMPANY, Ltd.**
TORONTO - CANADA

YOUR greatest asset is the confidence of your customers. If you have this in full measure, you are sure of good business which no competition can take away permanently.

JAMIESON'S Crown and Anchor Brand

On Building a Business

Your customers for paints and varnishes rely on you to give them what will satisfy them. Price may play its part at the beginning of the sale, but in the end be sure of this; it is *quality* that your customers desire. Always urge your customer to consider the item of satisfaction.

Established 1858

Your Good Name and Ours

For the paint business it is exceedingly simple and easy to *lower* quality —and the temptation with many is irresistible. But for 58 years we have adhered to the basis principle of our business which is: Quality first, last and always. This principle has conserved your good name and ours.

Write us if you are not stocking the Jamieson line of paints and varnishes, for our proposal to you, remembering that our name and history allied to your name and business will add to the asset of confidence referred to above.

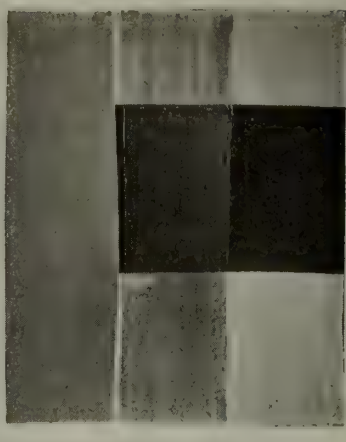
If interested, tear out this page and keep with letters to be answered.

Illustration shows brush marks in an ordinary coat of paint not properly applied. Notice the hills and valleys like a plowed field. Naturally the film is much less durable in the thinner portions of the layer than in the thicker. Just as naturally this thin layer will not be strong enough to resist the mechanical wear it is called upon to receive.



The illustration shows three paintings of the same paint out of the same can. The first, which is practically transparent, was stirred as a number of people stir paint. The middle strip shows the same paint partially stirred and that portion which covers the black marks completely, shows the same paint stirred properly. The dealer can save himself considerable trouble by learning how to stir paint and by imparting his knowledge to his customers.

to the amount of liquid, stirring is necessary.

Always recommend to your customers that they remove the entire lid and stir the paint from the bottom up with a wide paddle. Do not ever try to stir paint with any instrument like a screw driver or a pencil. These are common tools used. Paint cannot be stirred quickly with a paddle less than 1½ inches wide.

I would recommend that the dealer open up a quart of paint and see for himself if he stirs it properly. The motion should be about like making a figure eight, that is, the pigment should be lifted up from the bottom while the circular motion is going on. By using this method the paint can be stirred very quickly.

The conclusion which must be acknowledged by every painter and householder is, that extreme care must be taken with the foundations as well as with the protective coatings. No maker of good paint would guarantee results on yellow pine or cypress, or give a universal guaranty, because, unless the wood is properly treated, the paint will be likely to fail, and the better the paint, the more likely it will be to fail. Some difficulties in structural materials may develop, with all the care, but good paint made to meet present conditions, properly put on a proper surface, will not fail.

The illustrations accompanying this article will give a good idea of some of the difficulties which confront the paint dealer and manufacturer. From careful study of the conditions which are here shown it will be readily apparent that the painting business is a complex one. Many conditions must be taken into consideration. But with an ordinary amount of care and diligence these difficulties can be eliminated to a large extent.

WEEKLY MARKET REPORTS

(Continued from page 47.)

erly 40-12½ per cent. has been changed to 40-5-5 per cent.

Rivets Higher.—A further advance has taken place in copper rivets and the new prices are: copper rivets add 30 per cent. to list; copper rivets with usual proportion of burrs, add 30 per cent.; copper burrs add 50 per cent.

Wire Goods.—All wire goods are firm at prices previously quoted. Wire nails remain at $3.40 base and cut at $3.20 base.

WINNIPEG

WINNIPEG, April 6, 1916.—Business for the first week in April has been very good, but there are still reports from different parts of the country indicating that numerous trains have been held up, and this has resulted in a falling off in business. It is expected, however, that once the railway lines are all open again that orders will come along very freely.

The various jobbers report that difficulty is still being found in obtaining various lines of goods, and no hope is held out of better conditions until after the termination of the war. One line in which deliveries have been exceedingly slow is English cutlery. In speaking to the buyer of one of the wholesale hardware houses a few days ago, the writer was informed that the said buyer had literally forgotten about his various orders placed in England for cutlery, and was installing a very complete stock of American-made goods. He stated further that some difficulty was being had in getting deliveries from the American concerns, as they are from three to six weeks behind with their orders.

Price Changes.—There are several price changes to note this week, and a memorandum of same is given herewith. A new price has been made on shotgun powder, and to-day's quotation for 25-lb. kegs is $11.

Kraft wrapping paper has taken a further advance, and to-day's price of 7c is very much higher than has been the general quotation for the last two or three years.

Another line to show revised quotations upward is coppered iron, rivets and burrs in assorted pkgs., and also individual sizes. Rivets and burrs—Per lb.—Coppered No. 8, assorted, 29c; No. 10, assorted, 31c; rivets only, No. 8, 18c; No. 10, 20c; burrs only, No. 8, 32c; No. 10, 34c; tinned rivets only, No. 8, 20c; No. 10, 21c; burrs only, No. 8, 34c; No. 10, 35c.

Iron rivets also carry new prices this week, the three most important lines being section rivets, wagon box rivets and carriage rivets; the discount now applying to these three items is 35 per cent.

Axes Higher.—The long-expected advance in the price of different lines of axes has gone into effect, a straight 50c per dozen being added to all sizes.

The latest prices quoted for wrought iron washers, both in full cases and smaller quantities, is shown below. It will be noted that no reduction has been made in this line:

Wrought Iron Washers	Full Cases	Less 100 lbs.
¼	$11.25	$12 00
5-16	9.85	10.50
⅜	8.10	8.65
7-16	7.75	8.25
½	7.19	7.65
⅝	7 05	7.50
¾	6 91	7.35
⅞	6.91	7.35
1	6.91	7.35

Eavetrough and conductor pipe, galvanized, show an advance of about 10 per cent. this week, and the new prices are given herewith:

Eavetrough, O.G.—Per 100 ft.—No. 8, $3.70; No. 10, $4.50; No. 12, $5.50. Conductor Pipe—Per 100 ft.—2 in., $4.50; 3 in., $5.25; 4 in., $6.30.

Wire Rope Higher.—New prices have been made on wire rope, and quotations on some of the biggest sellers are given below:

Wire Rope—Per 100 ft.—¼ in., $5.75; 5-16 in., $6; ⅜in., $6.50; ½ in., $7.20; ⅝ in., $9.50; ¾ in, $12; 1 in., $21.

Hinges Higher.—One of the most important changes in prices for the week is that applying to the various lines of steel hinges. New prices have been made on the heavy tee and strap hinges and corrugated tee and strap in bulk and in cartons. We give below the price on two or three odd lines, and a complete list of prices may be found on the sheet of Winnipeg hardware quotations:

Heavy tee hinges—Doz. pairs.—6 in., $1.70; heavy strap hinges, 6 in., $2.20; corrugated tee hinges (bulk), 4 in., $1.15; corrugated tee hinges (cartons), 4 in., $1.75; corrugated strap hinges (bulk), 5 in., 95c; corrugated strap hinges (cartons), 5 in., $1.75.

Other lines affected are as follows:—Band iron base, $3.75 per 100 ft.; stove bolts, 65 p.c.; tire bolts, 45 per cent.; F.H. Brt. screws, 75 per cent.; R.H. Brt. screws, 70 per cent.; F.H. brass, 37½ per cent.; R.H. brass, 35 per cent.

Scale Makers Since 1835

The painter knows

when he uses Liquid Granite on a floor, that the finish will satisfy the most critical. He knows by long experience that it not only produces a beautiful soft lustre, but resists the hardest usage, and is easily kept in good condition.

During the 58 years we have been making varnishes, the label of Berry Brothers has come to be regarded by all classes of consumers as a guarantee of quality and a sure protection against inferior finishes.

It is this feeling of friendly confidence that makes Liquid Granite and all other Berry Brothers' products so desirable to recommend and safe to handle.

Among our Finishing Specialties for which the sale is large and continuous are:

LUXEBERRY WHITE ENAMEL—whitest white, stays white. Makes permanent snow white finish in either gloss or dull effects.

LIQUID GRANITE—floor varnish. Makes smooth satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH—for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR—for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes handsome finish, and will not turn white under the severest conditions of wear.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, April 6.—The prediction made at writing last week that within a few days—perhaps within a few hours—there would be more or less sweeping advances made on ready-mixed paints, has been followed by one of the most important announcements ever made to the trade by paint manufacturer. Briefly it cover advances summarised as follows:

House, porch floor and other high-grade paints 20 cents per gallon. Inside floor paints 10 cents per gallon Flat oil paints 20 cents on colors and 30 cents on whites per gallon. Varnish stain, oil stain and carriage and wagon paints about 10 per cent.

These advances must be considered in relation to the previous situation, i. e—whites continue generally 15 cents per gallon above ordinary colors and for some shades, including bright reds, the advance is even greater than on the whites.

As has been explained at length in another article in this issue, the manufacturers have been forced to make these advances, which with those previously made amount to 50 cents per gallon on standard colors of high class paints and 65 cents per gallon on whites, as the result of the recent startling advance of lead following on continued upward movements of oil, zinc, turpentine and chemicals. These advances are not yet fully covered by the new high quotations but it is understood that the basis is considered as a good working one under the conditions and that there are not likely to be further increases unless there are remarkable and unforeseen developments.

The advance may have the effect of checking current demand for the time being, especially as the trade is pretty well stocked, but it has been put into immediate effect and dealers take the stand that if there is no reaction the consumer will have to pay "the shot" because he can get nothing cheaper. Evidently there is an opportunity for the wise retailer to make something on his stocks if he sticks out for the present market values.

Linseed Oil.—There is no change in the linseed oil situation since last report and quotations are as then given. There is a fair demand and there should be a good movement with the opening of navigation. The market may be generally regarded as follows:

	Raw	Boiled
1 to 2 barrels	94c-95c	97c-98c
3 to 5 barrels	93c-94c	96c-97c
6 to 9 barrels	92c-93c	95c-96c

The Lead Situation.—The lead situation continues very firm at the recent high price established. In fact since then the American Trust which usually rules the market on pig has advanced 50c a hundred on the heels of a declaration of policy to the effect that prices would be kept down as low as possible to encourage domestic consumption. This caused a sensation but did not much affect the spot situation, as independents and outside interests were far above the Trust and are still maintaining a higher level than the new figure. The quotations are firm at $13,80 for tons and $14.10 for smaller lots.

Miscellaneous Items.—Gasoline and benzine are firm at last quotations with little change in the situation and the general outlook for higher prices. Turpentine is somewhat easier and the general quotation is 77 cents. Glass, putty, zinc, dry colors, Paris green and other items have shown no particular developments during the week.

Oils Are Higher.—Recently there has been a material advance on paraffine and other oils. Paraffine has been advanced from 22 cents to 24 cents while summer and winter black oil are both up 1 cent, the former to 14½ cents and the latter to 15½ cents.

TORONTO

TORONTO, Ont., April 6.—The feature of the paint market this week is the sharp advance in ready-mixed paints. This advance was predicted in Hardware and Metal last week, and is the logical result of the increase in cost of raw materials. Higher prices on paints have been expected sooner or later for some time, but the recent big advance in white lead brought the situation to a climax and forced the paint manufacturers to raise their prices. Floor paints are 10c higher, but practically all other lines of paints have advanced 20c per gallon. Pure shellacs are higher, and some stains have also advanced. White lead is very firm, and another advance is not unlikely, the pig lead market being higher than ever. Turpentine and linseed oil are unchanged, and both markets are steady. Higher prices on gasoline and naptha may be looked for at no distant date, the market being very strong. The improvement in the weather has stimulated the retail trade, and manufacturers are making shipments in good volume. Bookings are comparatively light at present, but an improvement in this respect may be looked for later. Collections are improving.

Linseed Oil Steady.—There is practically no change in the oil situation, and the market is holding fairly steady. There is some evidence of price-cutting. Flaxseed is a little weaker, and the demand for oil cake is very light, but the demand for linseed oil is improving, and will continue to do so, as the weather will soon permit of more active painting operations. Linseed oil is being generally quoted in Toronto as follows:

	Raw.	Boiled.
1 to 2 barrels	98c	$1.01 per gal.
3 to 5 barrels	97c	1.00 per gal.
6 to 9 barrels	95c	0.98 per gal.

Turpentine Steady.—The market is steady, both here and at Savannah. Stocks in the South are very low, but new turpentine will be in very soon. Stocks in Toronto are also very low, and shipments are being considerably delayed owing to the congestion in the freight yards. Turpentine is being quoted in Toronto at the following prices:—1-barrel lots, 80c; 2 to 4 barrels, 79c, and 5-gallon lots, 87c per Imperial gallon.

Sharp Advance in Mixed Paints.—The advance in ready-mixed paints predicted in these columns last week is now in effect. Higher prices have been anticipated for some time on account of steady advance in colors, zinc and white lead particularly, but the recent big advance in white lead changed the situation considerably, and forced the paint manufacturers to adjust their prices without any further delay. The advance which is 20c per gallon includes practically all lines except floor paints, which are 10c higher.

Gasoline.—The market is very firm, and a further advance is looked for in the near future. The demand for gasoline is increasing, and the crude oil situation is as tight as ever. Gasoline is unchanged at 32c, and benzine at 31½c per gallon.

White Lead Firm.—Notwithstanding the recent big advance in white lead, there is no sign of weakness in the market. Indications point to still higher prices for white lead, as the pig lead market is stronger and higher, due to a great scarcity of lead and a heavy demand.

Glass.—The new pane list has been printed and is ready for distribution in the trade. The new prices are considerably higher than the old list, but there will be a liberal discount. What the discount will be, however, has not been settled yet, but will no doubt be decided shortly. The general situation is about the same, and the discounts on cases are unchanged.

Why "CHINA-LAC" sells

There are a dozen

distinct "CHINA-LAC" colors besides Flat White, Gloss White, and Natural "CHINA-LAC," and there are dozens and dozens of uses for each one of them. The simplicity with which "CHINA-LAC" stains and varnishes in one operation and the admirable effects it gives, closely resembling Hardwood Finishes, commends it to every householder.

Home

painting is something that everybody does nowadays. The Popular Home Journals have encouraged a natural demand which "CHINA-LAC" admirably fills. With a can of this modern Varnish Stain, a brush, and a pair of hands, the average householder can renew and make bright and clean most everything in the home, such as

Stairways, Doors, Baseboards, etc.
Chairs, Tables and Furniture of all kinds
Linoleums, Oilcloths, Screens
Verandah and Porch Fittings
Registers, Radiators, Boilers, etc.
In fact, everything around and about the house.

A hundred and one uses means a hundred and one customers.

If you have not

done so already, this is the time to order one of our "CHINA-LAC" assortments, which, with their show cards, window cards, color cards and booklets, will make a most attractive Spring Clean-up Display and enable you to be ready for the evergrowing demand for "CHINA-LAC."

Send in to-day for fuller information.

MADE IN CANADA

3 SPECIALS GUARANTEED TO GIVE EXCELLENT SERVICE

IMPERIAL GENUINE — The highest grade of Babbitt Metal. Manufactured expressly for all bearings carrying extremely heavy loads.

HARRIS HEAVY PRESSURE — For all general machinery bearings. Is known as the BABBITT METAL WITHOUT A FAULT.

ALUMINOID — Specially prepared for medium and light speed machinery.

We Have Everything in Metals

THE CANADA METAL COMPANY, LIMITED

TORONTO MONTREAL • WINNIPEG

THE NEW PACKAGE

—will create a desire for a more extensive use of flat wall finish

The results are excellent — users are enthusiastic.

Muresco is a wall covering without an equal. It is easy to apply and durable in both beauty and service.

Muresco does not peel, crack, rub or blister. It is sanitary and hygienic, and its covering capacity is beyond expectation.

Most profitable to sell because it commands satisfaction in every quarter, and there is a good margin on every package.

Made in 18 tints and 16 colors.

Write for color card, prices and agency proposition.

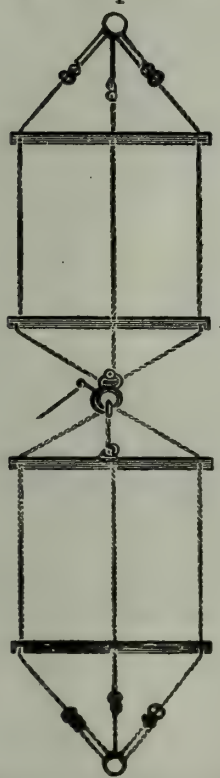
BT Top Fork



BT Centre Trip Sling

Profits

From Hay Tools

As a hardware merchant you have a golden opportunity to sell Hay Tools. The farmer is often in your store. He wants nails, hammers, paint, saws, shovels, building hardware, and what not. Ask him about his hay track. Maybe he has an old fork car that didn't work well at the last harvest. Maybe he hasn't one at all. That's your chance to sell him. There are profits in hay tools for any enterprising hardware merchant.

The BT Line is the best because every part of it is stronger than others and there are few complaints. Less than 1-10th of 1% of BT Forks are returned for repairs and less than 1-3 of 1% of the cars.

26 gauge	3 70	3 70
28 gauge	3 80	3 80

Re Gauges of Sheets.
In the quotations which follow on sheets, it is advisable to note that Queen's Head, Fleur de Lis, and Gorbal's Best Best, also Colborne Crown are English gauges, while Apollo and Premier are U.S. gauges. American 10¾ oz. is the same as English 28 ga.; American 28 gauge is the same as English 26 ga. The heavier gauges are almost identical, the English sheets running slightly lighter than the U.S. standard.

SHEETS, CORRUGATED

Per 100 sq. feet.	Galvanized	Painted
28 ga.	$ 5.50	$3.75
26 ga.	6.00	4.25

LINES

That are strictly seasonable and profitable to have in stock.

The lines named below need little introduction to "live" merchants, but we wish to emphasize here the desirability of placing your orders for them without a moment's delay. Your request for particulars and prices will be appreciated and promptly answered.

Dunham Water Weight Lawn Rollers

The Dunham Roller can be made heavy enough for firm turf or Tennis Court and light enough for the softest lawn. It can be emptied for moving or storing away. Axle revolves in hardened steel roller bearings.

Lawn Mowers, Garden Tools and Summer Sporting Goods

We carry Lawn Mowers by most all the best known makers and garden tools and accessories, including Hose, Hose Reels, Wheel Barrows, Grass Shears, etc. Also Lawn Tennis Requisites, Lawn Bowls, Cricket, Baseball and Golf Requisites, Fishing Tackle, Canoes, etc.

U.S. POULTRY NETTING

U.S. Poultry Fence is five or six times as strong and at least 100 per cent. better than the old style netting. It does not require top rail or base board. It stretches to the posts straight, even and nice, without buckling, bagging or sagging, or having that unsightly appearance so common to the old style netting and other makes of Poultry Fencing. It is so made that it is impossible for it to have long and short wires or irregular sized and shaped meshes.

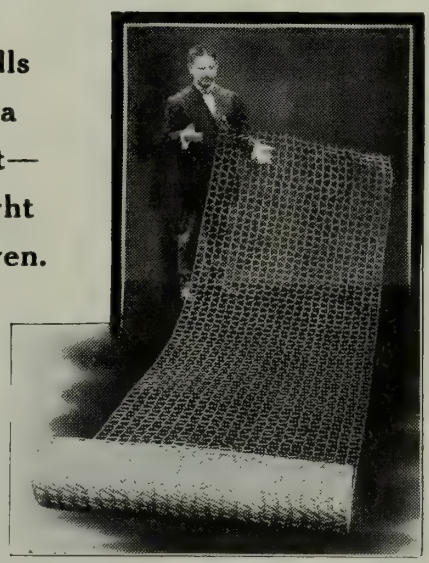
The Reason Why

U.S. Poultry Fence has parallel wires that cannot buckle, bag or sag because there is no crosswise pull. In fact you can stretch it to as high tension as desired and the fence will not draw narrower, between posts. It is built and stretches like a farm fence.

We have in stock at the moment full range of all sizes—

2 inch mesh from 12 inches to 72 inches.
1 inch mesh from 12 inches to 48 inches.

Unrolls like a carpet—straight and even.



LET US SEND CIRCULAR AND PRICES.

DO YOU SELL "LINGERWETT"?

It's the labor-saving paint and varnish remover. It's quick-acting and it stays wet, making easy work for the user.

It's the Best Yet, This "Lingerwett"

Cleans quickly, without stickiness—Requires no washing—Never gums.

Remember that "LINGERWETT" is in a class by itself—it is not like other removers. It contains different ingredients and it stays wet—That makes all the difference in the world. If you've used the others, you know.

Manufactured only by

WHEN A BUYER SAYS—

"I'm in the market for steel, iron, machinery or repairs, can you get me what I want?"—

that is your opportunity, Mr. Dealer, to

Make a Satisfied Customer and a Nice Profit Besides

Think and talk of our big shops, expert engineers and machinists as "our" (including yourself) not as "their." Let us help you realize how true this is. Our quotation on your next job will speak louder than what we say here.

If you are not receiving our monthly Stock List regularly, please tell us.

100% Sales Increase on Pratt & Lambert Varnishes during 1915

THAT'S the result of last year's business on Pratt & Lambert Varnishes in the store of W. A. Wilson & Sons, Wheeling, W. Va. When you consider that they are carload buyers, "100% sales increase" means something! The sales of Vitralite, "61" Floor Varnish and "38" Preservative Varnish ran way ahead of any other similar products that the Wilson people ever handled. Mr. Wilson credits this result to Pratt & Lambert advertising, which makes the varnishes of real quality known to everyone.

Why not buy some "ready-made" sales when you buy varnish? You can do it by handling Pratt & Lambert Varnishes.

Write for Complete Pratt & Lambert Dealer's Proposition.

A FEW HOURS TIME
Netted Him $13.75

Arthur W. Rundle of Toronto recently read in one of our advertisements that we wanted to get into touch with young men to represent us. He applied in person for a position, was accepted, and has since qualified in every sense of the word—by making good, both for himself and for us.

During his first three days, he worked on an average of five hours a day. The results of his efforts netted him $13.75 in Cash. We paid Mr. Rundle better than $1.00 an hour, for every hour he worked. He came to us without previous selling experience; he had no first-hand knowledge of business, but he did have confidence in himself and in our plan. This is one of the **few** instances of how our boys are making good.

The results of Arthur W. Rundle's success can easily **be duplicated** in your town and by you. We want more young men who are possessed of lots of energy and an ambition to get ahead. We want to make an appointment right away in your community — who knows but what you are just the man we are looking for?

Anyhow write us and let us explain our plan to you. Simply say: "Show me how to make profits out of my spare time."

THE STABLEMAN KNOWS

that a broom or brush that holds its bristles saves him both time and money. But even more important is the fact that the bristles grip the dirt and fetch it all out. That is why

"KEYSTONE" HORSE and STABLE BRUSHES

are so popular. The Keystone line includes about everything that is needed in the way of horse brushes—every one is about the best that can be made.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

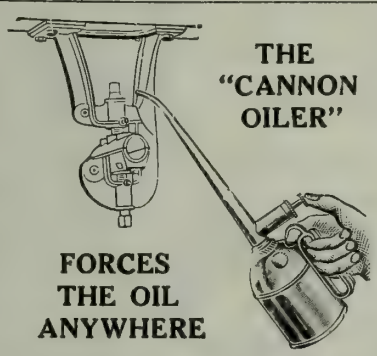
WILL INTEREST YOU



THE "CANNON OILER"

FORCES THE OIL ANYWHERE

Easy Seller Because—

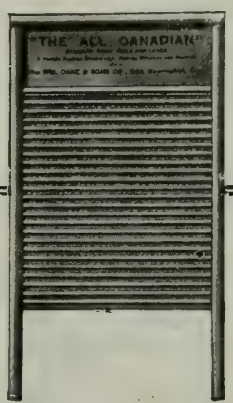
It is **exceptionally convenient, quick acting** and **an oil saver.**
Just what meets a long-felt demand for an oil can in which oil is entirely controlled by the operator in whatever position the can may be held. Not a drop of oil need be wasted, as the flow of oil stops the instant the pressure on the plunger stops.
A sure good sale and splendid profit. Order it now.

R. E. BLOOMER
KEITHSBURG, ILL.

The Aylmer Superior Lever Lift Pump

fitted for hand use. Has close revolving top and handle bearer, full six-inch stroke, wood handle, and is easy working.
This style of lever and fulcrum has several advantages over the ordinary style. Having short stroke, the power is greater, making it work easier. The handle, being wood, they are not so liable to break in frosty weather. Readily converted into a Windmill Pump.
Built for long duty under severe service.
A good profit-maker.

Aylmer Pump and Scale Company, Limited
Aylmer, Ont., Canada.



COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a **BETTER** profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

PEERLESS LAWN FENCING

Enhances Property Values

A BEAUTIFUL lawn fence gives any piece of property that symmetrical, pleasing, orderly appearance that not only affords its owner a keen sense of pleasure and satisfaction while occupying the premises, but when offered for sale, it brings a better price. It's an investment—not an expense.

Peerless Ornamental Fencing

is made of strong, stiff, galvanized wire that will not sag. In addition to galvanizing, every strand is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless Ornamental Fence is made in several styles. It's easy to erect and holds its shape for years.

Send for free catalog. If interested, ask about our farm and poultry fencing. Agents nearly everywhere. Agents wanted in open territory.

Condensed or "Want" Advertisements

Those who wish to sell or buy business or stocks, obtain competent help, connect with satisfactory positions, or secure aid in starting new enterprises, should not fail to use the Want Ad. Advertisement Page of HARDWARE AND METAL. It is the central market place of the hardware trade throughout Canada. There is always someone somewhere looking for just such proposition as you have to offer. RATES (payable in advance): 2c per word first insertion, 1c per word subsequent insertion, 5c. additional each insertion, when Box Number is required. Each figure counts as one word.

WANTED

WANTED—A GOOD SALESMAN CALLING on hardware dealers and painters, also a good railroad salesman, to take a well-known paint specialty line on commission. All enquiries treated confidential. Apply Box 260, Hardware and Metal. (tf)

WANTED — BY MAN WITH THOROUGH knowledge of hardware and paints, to represent firms on commission in one of the best districts of Eastern Canada. Enquiries addressed "Commission" care of this paper will bring full particulars. (15)

WANTED — A FIRST-CLASS HARDWARE clerk—one capable of taking charge of a retail store in a western city; must have a good personality, steady and thoroughly reliable; married man preferred. Reply, stating age, experience, nationality and salary required, to Box 275, Hardware and Metal, Toronto. (18)

WANTED — AT ONCE — A FIRST-CLASS hardware salesman for retail store; must be capable and aggressive, able to handle any class of trade; also another salesman with two or three years' experience. Apply Bond Hardware Co., Guelph. (15)

WANTED—A LINE TO HANDLE ON COMmission for the Provinces of Alberta, Saskatchewan and British Columbia by well-established firm who has the very best of representation. Line must be an all-round-year seller. Can guarantee very best results. Apply to Box 276, Hardware and Metal. (18)

WANTED — A GOOD, LIVE, ENERGETIC young man as clerk in retail hardware; one with two or three years' experience preferred. Apply to the Love Hardware Co., London, Ont. (15)

FOR SALE

FOR SALE — GENERAL HARDWARE IN best farming and manufacturing district of New Ontario. Only reason for selling is poor health. Stock $10,000. Will accept special rate and good terms for quick sale. Apply L. C. Wideman, Charlton, Ont.

FOR SALE—HALF INTEREST IN HARDware business in a fast growing suburb of Toronto. A fine opportunity for a progressive young hardware man capable of managing store. Will sell outright if desired. Apply Box 272, Hardware and Metal. (13)

FOR SALE — HARDWARE BUSINESS IN Southern Saskatchewan, in one of the best wheat growing districts in the province. Town has three elevators, and good territory to draw from. No opposition. Good store that can be rented cheap. Stock and fixtures, about $3,500.00. Owner has another store, and cannot look after the two. Apply to Box 270, Hardware and Metal. (16)

HARDWARE STOCKS AND GOOD-WILL of the late Frank A. Child. Business well established in Cochrane and Matheson, two of the most promising towns in Northern Ontario. Stock at Cochrane $10,000.00; store and dwelling, with all conveniences, $5,000.00. Stock at Matheson, $5,000.00; stock, store, land and other buildings being sold for $7,000.00 for quick sale. Apply Estate of Frank A. Child, Box 18, Cochrane, Ont. (17)

FOR SALE—SET OF TINSHOP TOOLS IN good working order, also saw table pulleys and shafting. Morgans Supply House, London. (15)

FOR SALE — ESTABLISHED HARDWARE business. Excellent site in West End of Toronto. Both residential and factory districts to draw from. Stock about $4,000. Must sell on account of continued ill-health. T. E. Hoar, 1760 Dundas St., Toronto. (15)

FOR SALE — FIRST-CLASS HARDWARE and tinsmithing business in good progressive Ontario city. This is a good clean stock. Best reason for selling stock and fixtures. About $6,500.00. Apply Box 273, Hardware and Metal. (16)

FOR SALE.—HARDWARE BUSINESS IN Saskatchewan, on main line C.N.R. 300 miles from Winnipeg. $1,500.00 will handle stock. Buildings and dwelling for sale or rent. Average sales about ten thousand. No opposition of any kind. H. Deacon, Invermay, Sask. (15)

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

In Demand

There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA Glass Tank Sprayer

The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover. The pump cylinder is made from L. X. tin and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock.

Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

DELTA FILES

Give a Service beyond expectation.

When a man buys a file he naturally expects a good measure of service in return for his money.

If the files you sell him are disappointing, he loses confidence in you and you lose his patronage in this and other lines as well.

Take no chances of losing trade — sell Delta Files to everyone.

The keen cut and durability of Delta Files have made them popular everywhere.

We have very effective advertising matter that we supply free to all Delta Agents. This material greatly assists in the getting of new customers.

Announcement

We have pleasure in announcing to manufacturers, dealers and agents the arrival in Canada of our European Manager, Mr. E. J. Dodd.

Mr. Dodd, with headquarters in London, Eng., represents HARDWARE AND METAL and thirteen other journals published by the MacLean Publishing Company. He enjoys a very wide acquaintance among manufacturers, especially in Great Britain, and is recognized and consulted as a leading authority on matters pertaining to Canada and Canadian Trade.

He is here to familiarize himself with the changed conditions which have been brought about by the war—to secure a first-hand knowledge of this prospering and progressive country, with its newly-acquired aggressiveness and confidence. He is at the service of our friends who may be desirous of securing information regarding British lines, and he is prepared to execute any reasonable commission upon his return to London in a few weeks' time.

We shall be glad to hear from interested parties, either by letter, telephone or telegraph, when an appointment can be arranged with Mr. Dodd, who will visit Toronto, Winnipeg, Montreal, Halifax, St. John and other cities.

It will be understood, of course, that whatever we may be able to do for our friends through the good offices of Mr. Dodd will not place them under obligation in any way—whatever we are privileged to do will be in line with our policy of rendering a *greater* service to our subscribers and advertisers.

Let the War Increase Your Rifle Sales

Owing to the war the demand for an accurate and reliable target rifle is steadily increasing.

The Ross .22 Cadet Rifle has all the qualities of an ideal small target rifle. It is accurate, reliable, well-finished and strongly built.

It is endorsed by the Canadian Government who have adopted it for use in all Canadian Cadet Corps. Retails at $12.00.
